cumulative noise impacts. Given that the RA may not be completed prior to decision making on this EA/IS, it is particularly important to identify potential long-term mitigation strategies now, or at minimum commit to implementing any additional measures that may be recommended through the RA.

2.5.3 RECOMMENDATIONS AND REQUESTS

Air Quality

The lack of congruency between Sections 9.1.6 and 9.3 results in Project components with potential effects that are not included in the effects assessment. Nibinamik requests that even minimal potential contributions to effects be discussed and evaluated as part of the air quality assessment in the EA/IS. To ensure the full spectrum of potential effects is captured for alignment throughout the EA/IS, Nibinamik also requests that the list in Section 9.1.6 identifying Project components contributing to atmospheric effects is completed in alignment with the Project description (specifically Sections 4.4.2.2, 4.3.3.6, and 4.4.2.8). The exclusion of Project components and their potential impacts from the air dispersion modelling relies on the mitigations being 100% effective in eliminating the impact, i.e., absolutely no burning should take place, and MSF power should be from renewable energy. Nibinamik notes that 100% effective mitigations are unlikely, meaning that the modelling should be adjusted to accommodate all potential emission sources.

To improve the performance of mitigations for dust and particulate matter, Nibinamik recommends that the Draft EA/IS consider road applications with longer-term effectiveness than water spraying. In comparison with other road applications, water has a relatively short-term ability to mitigate impacts. However, this must not be interpreted as a Nibinamik preference for chloride-based products or acceptance of the effects of other chemical applications . Impacts of dust must not be traded for impacts from other potential applications. Nature-based alternative solutions should be applied to improve effectiveness, under the provision of free, prior, and informed consent. This would also serve to reduce knock-on effects from frequent road watering such as GHG emissions.

To ensure the dust and particulate mitigations are successful, a dustfall monitoring program should be established for construction and early operation and be paired with particulate monitoring station(s) at the potentially affected sensitive receptors. This is particularly important because the current evaluation underrepresents dust sources and the potential extent of their impact.

Nibinamik recommends that the RSA be expanded to cover the potential real-world extent of air quality impacts. Additionally, there are also RFDs that will interact with the RSA (especially if extended appropriately), including local Webequie sources as well as industrial activity farther afield. To this end, Nibinamik recommends that a much more robust and reasonable cumulative effects assessment is undertaken to comprehensively address air quality and the Project's contribution to cumulative effects, especially considering it will facilitate Ring of Fire development and be a catalyst to broader regional development. This must include consideration for mining impacts to the atmospheric environment from contribution to not only GHG emissions, but other potential impacts such as acid rain.

Finally, accommodations and Project mitigations should include measures to reduce local air quality contributions, such as shifting construction energy toward renewable sources. The Draft EA/IS claims vegetation will mitigate air quality effects and that, to ensure this is realized, offsetting measures should protect intact lands that provide these ecological functions.

Collectively, these recommended improvements would better align the Project with assessment expectations, IAAC guidance, and community concerns, while ensuring that air quality effects are fully assessed and mitigated to the extent possible.

GHG Emissions

The Draft EA/IS lacks adequate cumulative assessment and Project-specific GHG mitigation, which conflicts with rights-based impact considerations and IAAC guidelines. To address these shortcomings, a more rigorous cumulative effects assessment of GHG emissions must be undertaken. The GHG cumulative effects assessment should include emissions from foreseeable regional projects like additional roads, mining, and forestry. While climate change is global, reducing GHGs also benefits local air quality, which is another rationale for including Project-specific mitigations that will address climate change impacts. Nibinamik recommends deferring WSR decisions until:

- A robust cumulative effects assessment of GHG is complete, expanding the Project's GHG scope to include lifecycle emissions (account for camps operations and long-term aggregate operation), and
- Project-specific mitigations are proposed that incorporate practical considerations to reduce cumulative effects of GHG emissions:
    - low-carbon procurement strategies (such as low-carbon road materials)
    - low-maintenance designs (durable material and design standards that reduce the need for road repair)
    - vegetation management to promote roadside carbon sequestration (high carbon sequestering species) and maintenance of adjacent carbon sinks' ecological function
    - replace reliance on diesel generators at the MSF and quarry sites (either through renewable energy solutions or electrification).

Aside from properly addressing the potential cumulative effects from reasonably foreseeable future impacts, there should be consideration to reduce future potential impacts from the disruption of carbon sinks. Recognizing that the disruption of biomass is a significant contribution to GHG emission impacts, the Draft EA/IS should be seeking to reduce potential future impacts from other potential linear projects by integrating—through simultaneous operations— foreseeable power or communication connectivity at the same time as road construction. Improved regional planning to accommodate the pending mining expansion is an opportunity for this Project to demonstrate improved alignment with Canada's net-zero objectives. This would also contribute to a Project-specific benefit by reducing operational GHG impacts from power requirements at the MSF and quarries.

Nibinamik also requests that the assessment of significance be reframed. Instead of relying only on provincial and national comparisons that inherently downplay Project impacts, the WSR should be evaluated against three more meaningful benchmarks: (1) regional cumulative effects that include foreseeable projects and Ring of Fire development; (2) a low-carbon WSR design and operation alternative; and (3) the IPCC Net-Zero Roadmap benchmarks for 1.5°C and 2°C pathways, which provide internationally recognized guidance for infrastructure compatibility with global climate goals. This would provide a fairer and more transparent measure of Project GHG emissions and contribution to climate change.

In absence of meaningful GHG assessment and GHG cumulative effects assessment, Nibinamik (and other affected Nations) must have a role in identifying lands for conservation or set-asides that can serve as offsets, particularly for carbon sinks (and with consideration for caribou, migratory birds, and wetlands). Supporting Indigenous-led conservation in this way would not only mitigate climate impacts but also contribute to Canada's commitment to conserve 30% of lands and waters by 2030.

An Indigenous-led, land-based stewardship initiative involving Nibinamik, to address ecosystem health and climate change resilience, would support accommodating the impacts from the lack of proper GHG assessment and climate change considerations. This initiative would also improve Project considerations for cultural continuity, including traditional land management practices supporting landscapes adapted to fire (and climate). Offsetting actions should be considered in combination with monitoring or guardianship programs. Offsetting should target reducing the risk of wildfire, support cumulative effects mitigation, and align with Indigenous Rights and responsibilities to care for the land.

Noise and Vibration

Nibinamik recommends the net effects assessment consider the timing of effects, as this is an important criterion for understanding noise impacts on traditional land use. For all NSAs, Nibinamik requests that a construction schedule be developed collaboratively with land users to avoid periods of significant land use (e.g., seasonal harvests and cultural practices). With helicopter use for crew transportation, this may include areas identified that should be no- fly zones in alignment with wildlife movement patterns and the timing of traditional land use. Nibinamik recommends that this be paired with a notification process to advise Nibinamik and potential land users of the location and timing of noise-creating activities including blasting. Nibinamik notes that the Draft EA/IS presumes the notification process will be addressed by the construction contractor.

While Nibinamik agrees with the complaint mitigation in place, the complaint and investigation process should include recognition that issues can be brought directly to the construction contractor or operation and maintenance contractor. This process must involve accountability for communicating resolutions or changes in general noise management practices to ensure rights are appropriately protected. This is especially important because there are no proposed mitigations beyond best practices, and it is unclear whether the assessment includes all potential noise sources. Noise sources of uncertainty that are of particular concern include the following and should be reconsidered in the assessment:

- Noise from camps, such as generators, should be considered to ensure the assessment accurately predicts effects and impacts.
- Noise from helicopters should be considered and mitigated. Flight paths should avoid areas used for hunting, and account for wildlife movement and patterns/use areas, to avoid sensitive periods.

Finally, Nibinamik recommends that noise mitigations encompassed in the Draft EA/IS include design considerations, and that a component of the design consideration includes:

- Trees to provide noise buffering capacity. Where there are no trees along the edge of the ROW, appropriate species could be selected and planted in sufficient density to support the establishment of long-term sound barriers for NSAs. As discussed above, vegetation is noted as a barrier to air emission dispersion—the same is true for noise. While operational noise is expected to be limited, this does not detract from the potential ability to address long-term noise and air quality through the same mitigation of vegetation management, especially adjacent to gravel surfaces and quarries.
- In locations where fill placement will support buffering receptors from noise the use of engineered terrain must be considered as part of the design. It is acknowledged that the cut fill balance has not been determined, and the movement of material has additional environmental impacts. This solution must be weighed against other potential impacts and should form a component of consultation through the design phase for joint decision making.

2.6 FISH AND FISH HABITAT

The below subsections relate to the Nibinamik review of Section 10 (Fish and Fish Habitat) as well as relevant content within Section 13 (Species at Risk) of the Draft EA/IS.

2.6.1 SUMMARY OF DRAFT EA/IS CONTENT

The subcomponents identified for the Fish and Fish Habitat VC were:

- Fish habitat quantity and quality
- Fish populations

With considerations for 12 fish species:

- Brook Trout
- Lake Whitefish
- Chain Pickerel (identified in the TISG but assessed as unlikely to be found in the region)
- Yellow Perch
- Cisco
- Burbot
- Longnose and White Sucker

- Lake Chub
- Northern Pike
- Walleye
- Lake Sturgeon (the only species-at-risk fish included in the assessment)

The spatial boundaries for this VC included the Project Footprint (the 35-m wide ROW), the LSA (extending 1 km from centreline of the preliminary recommended preferred route and 500 m from the boundaries of temporary and permanent structures) and the RSA (the Upper Winisk River, Middle Winisk River, Upper Ekwan River, and Lower Attawapiskat River Outlet watersheds). However, most of the investigations took place within the LSA.

The Draft EA/IS included IKLRU information regarding Fish and Fish Habitat from Webequie, Marten Falls, and Weenusk First Nations. The three (3) communities shared information regarding the importance of their connections to lands, waters, and fish—how the waters of this region are sacred and critical to Anishinawbek culture. Site- and Project-specific information included: existing concerns (e.g., mercury contamination in harvested fish species), key species, local life histories, fish harvesting information (e.g. fishing and preparation methods, species preferences), and Project-related concerns (e.g., impacts of dust, impacts of development and contamination, changes to habitat from poor design).

EXISTING CONDITIONS

The Draft EA/IS characterized existing Fish and Fish Habitat conditions based on (1) desktop review of environmental impact assessments in the Project area, satellite imagery, aerial photography, provincial and federal government publications, IKLRU information, and (2) field surveys for fish community (active sampling and environmental DNA surveys), fish habitat, fish spawning, and benthic macroinvertebrates (important food sources for many fish species). The Draft EA/IS identified 31 water crossings including 30 watercourses (i.e., rivers, streams, creeks) and one (1) lake along the proposed preferred WSR route.

A set of three (3) criteria was used in the Draft EA/IS to decide whether crossings would be surveyed by the field team. Surveys would be completed if one or more of the criteria were met:

- Watercourses and/or waterbodies displayed the ability to support fish at the time of the field survey (dry water crossings were not assessed);
- Watercourses and/or waterbodies were likely to contain a criterion species, defined as a species of importance to Indigenous peoples for recreation, commercial and/or food source purposes and are also identified in the TISG; and
- Watercourses and/or waterbodies where no specific aquatic (instream) habitat field data of sufficient detail were available from the review of background information sources.

The Draft EA/IS also included "aerial assessments" (i.e., photographs taken from the air) for a selection of crossings, citing difficult or unsafe access and wet terrain conditions as preventing on-the-ground surveys.

Fish community was surveyed at 15 of 31 crossings, using minnow traps, dip nets, and gill nets, as well as environmental DNA (eDNA) at nine (9) locations. Seventeen (17) fish species were encountered across the sampled locations, with northern pike, white sucker, walleye, and yellow perch the most widely distributed fish. Neither brook trout nor lake sturgeon were encountered by the field team during field surveys. The Draft EA/IS also used information from previous projects in the area to characterize the fish community in the RSA and identified 32 species, including 13 that were not encountered during surveys conducted as part of the Draft EA/IS.

Spawning surveys were conducted in June using egg mats (which collect and trap a proportion of eggs as they are broadcast by female fish during spawning activities) at three (3) locations, targeting walleye and lake sturgeon. No eggs from either species were recovered.

Potential Impacts

Construction and long-term use of the WSR may affect fish and fish habitat. The Draft EA/IS has evaluated:

- Destruction/loss of fish habitat due to the construction of culverts and bridges at crossings
- Harmful alteration and disruption of fish habitat through:
  - The placement of materials for construction;
  - Construction and maintenance activities resulting in erosion, deposition, and transportation of sediment;
  - Accidental spills and air contaminant emissions during construction and maintenance activities which affect surface water quality;
  - Construction of permanent or temporary culverts and bridges that alter hydrology or riparian habitat; and
  - Construction or maintenance activities that introduce invasive species.
- Changes in fish access to habitats through:
  - The installation of temporary flow isolation structures for instream works which create temporary barriers;
  - Constructed culverts at crossings that may become visual barriers to fish or clogged with debris; and
  - Constructed culverts at crossings that provide potential habitats for beavers to build dams.
- Changes to fish populations due to increased access and increased harvest
- Changes to fish populations due to injury or death of fish, caused by:
  - Placement of materials and instream works;

- Blasting of rocks during construction;
- Dewatering and fish salvage from isolated areas or beaver dam removals;
- Maintenance activities requiring in-stream work; and
- Accidental spills that impact surface water quality.

The Draft EA/IS uses a criteria scoring system to characterize the significance of net effects of the Project (i.e., effects remaining after applying mitigations—see below). This system is used in the Draft EA/IS to assign scores to different levels of qualitative criteria depending on their severity (e.g., low, moderate, and high magnitude of an effect depending on whether a measurable local change will result in varying degrees of overall regional change). The Draft EA/IS considers all but two (2) net effects to be negligible, with one (1) low impact effect during construction and one (1) low impact effect during operations. The Draft EA/IS asserts that all net effects are not significant based on their criteria scoring system.

Proposed Mitigations

The mitigations proposed in the Draft EA/IS to reduce or remove the Project impacts to fish and fish habitat focused primarily on avoiding interactions with fish habitat through planning and design, employing best practices during Project activities (e.g., work timing windows, erosion and spill control, and buffers for materials storage, blasting, and vegetation clearing). The Draft EA/IS also relies on the creation of a Construction Environmental Management Plan and an Operations Environmental Management Plan. These plans would form the basis for monitoring and management of potential interactions during their respective Project phases, to validate planning, design decisions, and best practices.

Cumulative Effects

The Draft EA/IS carried forward two (2) net effects to be considered in the cumulative effects assessment, which evaluated the combined effects from the Project and other RFDs and activities. These were (1) changes to fish access to habitats during the construction phase and (2) changes to public access resulting in increased harvest during the operations phase. Effects from other proposed access roads are expected to be similar to those from this Project, depending on timing, location, and type of construction work. Each project will have its own site-specific mitigation measures to prevent cumulative effects. These include monitoring, erosion control, best management practices, and abiding by regulatory requirements.

The Draft EA/IS states that while they expect the WSR to contribute to cumulative effects, these effects are expected to be low magnitude and unlikely to affect the resiliency of fish populations across the RSA.

2.6.2 EVALUATION

Nibinamik recognizes the good efforts in the Draft EA/IS to pull together a comprehensive characterization of the existing conditions in the aquatic environment along the preferred road route.

Nibinamik also recognizes the voices of Webequie land and water users who contributed important information to the existing conditions characterization.

Nibinamik has identified a number of substantial concerns with the Draft EA/IS effects assessment that increase the risks to fish, aquatic ecosystems, and Nibinamik members' rights and interests. These concerns are linked to three (3) general themes, driven by Nibinamik community priorities: cumulative effects, the accuracy of effects assessments, and ensuring environmental protections. More specific detailed comments can be found in Appendix A.

Nibinamik is concerned that the Project's role as a key enabling activity for Ring of Fire development is not sufficiently represented in the effects assessment. The WSR will facilitate what will likely be multiple generations of increased industrial development and resource extraction across the Nibinamik Homelands. The implications of this development—both on the environment and on the Nibinamik community—are poorly integrated into the effects assessment, if at all.

Nibinamik is very concerned with the methodology used in the Draft EA/IS to evaluate net effects. The qualitative ratings, assigned scoring, and aggregated total method (see section 10.6 of the Draft EA/IS) appear to be intentionally downranked. This downranking of effects means the Draft EA/IS minimizes the potential Project impacts and minimize the significance of these impacts. This intentional minimization is not evidence-based, nor does it align with Nibinamik values and interests.

Nibinamik is concerned that the Draft EA/IS relies on a 100% success rate of proposed mitigations to minimize or eliminate potential Project effects, and that the proposed mitigations are often management or monitoring plans that are not yet developed. This approach creates significant uncertainty and risk, to aquatic ecosystems as well as Nibinamik rights and values. A more proactive approach that includes contingency planning and robust follow-up monitoring would provide more reliable assurances of protection and a greater chance of success.

2.6.3 RECOMMENDATIONS AND REQUESTS

Nibinamik recognizes fish as a cultural keystone, as food and as a component of aquatic ecosystems. Maintaining healthy fish populations and aquatic ecosystems is directly tied to the community's capacity to thrive, both spiritually and physically, and to pass on critical cultural learnings to future generations. Nibinamik offers some general recommendations, below, to ensure protection of the fish and aquatic ecosystems of this region. More specific comments are provided in Appendix A.

- The cumulative effects assessment is a critical shortcoming of the Draft EA/IS. Nibinamik recommends preparation of a more substantive assessment that incorporates additional reasonably foreseeable projects beyond a few additional linear infrastructure developments. This concern could also be addressed through ensuring the RA is completed prior to the Final EA/IS, and that the findings from the RA are appropriately integrated.
- Nibinamik requests more robust field surveys with more relevant timing and methods to ensure species presence and habitat use of important fish species is accurately characterized. This information must then be brought forward into a revised effects assessment.
- Nibinamik requests a fulsome revision of the determination of significance and its associated criteria. The qualitative criteria must reflect site- and species-specific context (e.g., the loss of

species at risk (SAR) fish is a comparatively larger/more significant impact than the loss of a forage fish species), and cultural context (appropriately informed by IK). The determination of significance must be revised to appropriately score and weight criteria so as not to bias results toward effects rated as not significant. The entire process must be meaningfully informed by IK through direct discussions and involvement of local First Nations, including Nibinamik.

- Nibinamik is concerned that language used throughout the proposed mitigations errs on the side of basic practices (i.e., using qualifiers such as "if possible" or "when feasible") rather than prioritizing environmental protection and avoiding impacts. Nibinamik recommends the use of stronger language throughout the mitigations to confirm the commitments within the Draft EA/IS to environmental protections above and beyond industry standards.
- Nibinamik requests that the CEMP and OEMP include targeted stressor-specific monitoring plans, especially for sediment and erosion control. These plans should demonstrate that mitigation measures have been as successful as predicted in the Draft EA/IS. Development of these plans must include input from Nibinamik and other local First Nations.

2.7 VEGETATION AND WETLANDS

2.7.1 SUMMARY OF DRAFT EA/IS CONTENT

Existing Conditions

Existing conditions were determined through a desktop review and field investigations. Datasets from both Land Information Ontario and Far North Land Cover were used to characterize vegetation and wetlands, when discrepancies arose, Land Information Ontario prevailed for accuracy. Aerial imagery, LiDAR, and existing background data were also examined.

A wetland function assessment was performed using modified landscape-level (tier 1) Wetlands Function Assessment methodology. This method was chosen for the unique landscape of the Project areas with a high proportion of wetlands— within the study areas, wetlands are the dominant vegetated habitat classification affecting hydraulic processes. The LSA and RSA area are made up of 81.78% and 80.29% wetland complexes, respectively. The WPT used a modified landscape level assessment, with functional indices grouped into three categories: Geophysical, Biophysical and Socio-economic. Three broad wetland categories were identified in the Project study areas: swamps (most abundant), tree bogs/fens and marshes, along with 19 different wetland ecosites.

The LSA and RSA fall within the Big Trout Lake Ecoregion (2W) of the Boreal Shield Ecozone. A small portion of the RSA (2.5%) also extends approximately 4 km east into the James Bay Ecoregion (2E) of the Hudson Plain Ecozone.

Six (6) provincially designated areas (parks or other protected or conserved areas) are located within 30 km of the WSR, with one (Winisk River Provincial Park) within the RSA, located 2.3 km from the WSR. There are no federally designated sensitive areas or national parks within 30 km of the WSR.

Upland ecosites occupy approximately 8.18% of the LSA and 7.25% of the RSA. The ecosite categories found were: conifer forest (most common), hardwood forest, open rock, and shrub.

Riparian ecosystems make up only an estimated 0.07% of the LSA and RSA land area, and were found to be comprised of 17 different ecosites.

Nine (9) non-native species were identified during field surveys. The species were not found within the sampled plots, rather were distributed around the community of Webequie. The Draft EA/IS attributed their presence to human influence.

In total, 302 plant species were identified, most being vascular plants. Although six (6) species of conservation concern were flagged as occurring within the study areas during desktop review, none were found during field surveys conducted by the WPT. However, areas surrounding the Webequie community were not surveyed due to the COVID-19 pandemic and as a result the presence or absence of those species was not able to be confirmed. No federal or provincial plant species listed as species at risk were observed within the Project study areas during field surveys, but two provincially rare mosses were identified.

The surveyed ecosites were not considered to be provincially rare, and no vegetation communities were ranked S3 or higher. Locally rare or uncommon communities were calculated to comprise 0.42% of the LSA and RSA. However, it was noted that they may occur in greater quantities but complexities in access and identification made mapping difficult.

Areas and Plants of Traditional Importance to Indigenous Peoples

The harvesting of plants of traditional importance to Indigenous Peoples for cultural medicinal use or as sources of country foods was assessed through (1) the Country Foods Assessment, (2) the Assessment of Effects on Cultural Heritage and Archaeological Resources, and (3) the Assessment of Effects on Indigenous Peoples and the Exercise of Aboriginal and/or Treaty Rights. Therefore, the assessments were primarily informed by Webequie community data. Within these assessments, there were seven (7) plants of traditional importance identified for cultural or medicinal use or as a source of country food.

Project Effects & Mitigations

Four (4) primary effects of the Project were considered for this VC as a result of construction and operation of the WSR:

- Loss or alteration of upland, wetland, and riparian vegetation communities/assemblages, species, and biodiversity.
- Loss or alteration of wetland functions, specifically disruption of the geophysical, biophysical, and socio-economic functions of wetlands.
- Loss or alteration of species at risk plants and species of community conservation concern

- Loss or alteration plant species and communities of traditional importance to Indigenous Peoples for cultural or medicinal purposes or as a source of country foods.

The introduction and spread of invasive species is a well-known impact related to roads. It was determined that, for the Project Footprint, the greatest impact on vegetation community diversity will occur within 20 m of the ROW and other supportive infrastructure areas, with moderate effects at 40 m and minimal effects at 60 m. There is a net gain of 153.9 km of edge habitat (within 20 m) across all vegetation patch classes within the RSA as a result of new edge communities created along the sides of the proposed road and ancillary facilities. The Draft EA/IS's focus in planning mitigation measures for invasive species is the prevention of introduction. Other edge effects identified are related to changes to microclimates causing loss or alteration to vegetation, which are predicted to occur within 10 m of the ROW, with moderate effects within 20 m and minor effects at 50 m.

Accumulation of dust produced by the Project may result in vegetation loss or changes in the LSA, but losses were predicted to be localized to areas adjacent to the roadway up to 50 m from the centreline. Moderate and minor effects were predicted to occur at distances of 100 to 150 m from the centreline of the road.

The Draft EA/IS notes that there will be direct loss of wetland function within the Project Footprint. However, they claim the overall changes to wetland function are anticipated to be minimal based on modelling and assuming the success of proposed mitigations.

The effect on locally rare species and communities of conservation concern were predicted to be low and include the loss of some rare communities from the landscape. The Draft EA/IS also noted that no known locally rare plants species will be removed during direct vegetation removals required for the Project.

The Draft EA/IS asserted that overall, the effects on species of traditional importance to Indigenous Peoples will be low. The losses of vegetation classes that support the important species were predicted to be less than 5% within the LSA (except for conifer/mixed wood forest loss at 7.3% and rock barren at 37% loss) and less than 1% in the RSA. The potential benefit of an increase in Indigenous harvesting of plants (driven by better accessibility) was recognized, but this could be countered by losses to non-Indigenous gatherers.

Mitigation Measures

A three-tiered hierarchical approach will be used involving avoidance, reduction and control, and compensation or habitat offsetting to address potential effects of the Project. This process will include restoration or reclamation of direct losses to vegetation and wetlands. However, at this stage the Draft EA/IS notes that specifics are uncertain. Site-specific management plans will also be implemented in the CEMP and OEMP to guide the Draft EA/IS and contractors. The Draft EA/IS claimed that net effects on vegetation and wetlands varied from negligible to low and moderate levels of significance, assuming successful implementation of mitigation measures.

2.7.2 EVALUATION

Areal Extent of Vegetation and Wetland Impacts

The reported 0.8% direct and indirect loss of vegetation and wetlands within the RSA (AtkinsRéalis, 2025) does not account for the true impact to vegetation from this road. This novel linear feature, especially in conjunction with the Northern Road Link, Marten Falls Community Access Road, and nearby mining operations will create emergent cumulative effects that will impact local ecological communities to an unknown, but likely significant, extent. The most likely mechanisms for these vegetation and wetland impacts are as follows:

- Invasive species
- Edge effects
- Increased dust, herbicides, and pesticides
- Impacts to plant medicines (from contamination and increased anthropogenic access)

Invasive Species

Nibinamik is highly concerned with the potential proliferation of invasive species caused by the WSR and development in general in the region. Invasive species exert an annual cost of between $13–$34 billion dollars on Canadian industries (Colautti, 2006). This is, by definition, an underestimate: no dollar value is assigned for subsistence harvesting, culturally significant plants and animals, or ecosystem services. Roads are known vectors for their proliferation (Mortensen, 2009) and therefore, the proposed WSR comes with a major risk of spreading invasive species.

Species may include terrestrial vegetation such as European buckthorn, garlic mustard. and Japanese knotweed, especially as the boreal climate continues to warm. Tree pests such as hemlock woolly adelgid, forest tent caterpillar, pine false webworm, and spruce budworm can spread on vehicles, plant debris, brush, or firewood. Tree diseases like Armillaria root rot, brown spot needle blight, and white pine blister rust are also at risk of being spread along the WSR.

Exotic fish, mussels, crayfish, and various invasive aquatic diseases are all capable of moving into new habitats via recreational and commercial watercraft (Smith, et al., 2012). The wetland-, lake-, and watercourse-dominated landscape of the boreal shield and Hudson Bay lowlands provide immense potential for aquatic invasive species. This massive wetland landscape, coupled with a changing climate, could enable devastating invasives such as quagga mussel to become established in the north. Also, aquatic plants like common reed, flowering rush, and Eurasian water-milfoil are also easily spread by road infiltration and access by water users.

Many of these invasives have the potential to exert major damage on culturally valued ecosystem components. Diseases, pests, and non-native competitors could impact culturally significant plants and wildlife, and aquatic invasive species could substantially disrupt local aquatic ecosystems.

The Draft EA/IS has relied entirely on prevention as the focus of mitigation measures for invasive species spread. However, the Draft EA/IS has assumed 100% successful prevention—which is essentially impossible—and risks misrepresenting the actual potential effects due to invasive species. Further, the Draft EA/IS provides no proactive contingency planning in the event prevention fails, beyond the creation of management plans for construction and operation (for which no details or roadmap for Nibinamik participation has been provided).

Edge Effects

Disturbance -tolerant and invasive plant species are known to thrive along roads and other anthropogenic linear features, and in some cases, this impact has been observed extending as far as 150 m away from the road edge (Hansen, 2005). Therefore, a 150 m wide effect zone extending beyond the edge of the roadway may experience moderate to high impacts from shifts in vegetation community composition and diversity. This is well beyond the less conservative edge zone used by the Draft EA/IS (potential moderate effects to 40 m), which risks mischaracterizing impacts to culturally important terrestrial ecosystems further than 40 m from the roadway.

This shift in vegetation diversity and community structure may be coupled with increased light exposure and dust from the road and novel fragmentation of previously intact interior habitats. Combined, these effects have the potential to create permanent and significant negative impacts on plant communities adjacent to the proposed road. The current assessment of the edge effect does not account for 150 m on each side of the road, which may be significantly altered.

Increased Dust, Herbicides, and Pesticides

Nibinamik is concerned that airborne dust and other particulates, including intentional spraying, will impact the diversity of vegetation communities along the WSR as well as the quality of harvested plants. The potential impacts of dust from vehicle traffic were included in the assessment, but restricted to very localized effects. Nibinamik is also concerned that the spraying of herbicides or pesticides will have unforeseen negative impacts to native vegetation – which were not characterized within the assessment. Herbicide use may accompany invasive species control and if not specifically targeted could also impact native vegetation along the WSR.

Nibinamik is also concerned that the large-scale spraying of herbicides to suppress some tree species in favour of marketable timber species may follow development of the WSR. These potential impacts from to the logging industry were not included as part of the RFDs in the cumulative effects assessment.

Impacts to Plant Medicines

Many pathways of impacts to medicinal plants are possible from the proposed road. These include increased human-caused forest fires, invasive species, overharvesting, and vegetation community shifts toward successional and disturbance-tolerant species (Watson, 2005).

Because plant medicines are not assigned western economic value, they are not typically taken into account when examining the impact of invasive species (see above). Habitat fragmentation would

alter vegetation communities along the WSR, with ecological effects to extensive adjacent areas (such as changes in plant species composition, road avoidance by large wildlife, pollinator and seed disperser impacts, etc.). The ecological changes to road-adjacent areas may also impact distribution and abundance of plant medicines in currently unforeseen ways.

Airborne dust and runoff contaminants such as silts, sands, and salts will have a negative impact on the quality of medicinal plants near the WSR. Increased access to the region by various people (for recreation, mining, forestry, construction and maintenance, community members, visitors, hunters and anglers, etc.) will increase harvesting—and possible overharvesting—of plant medicines (Mychasiw & Hoefs, 1988). High economic value medicines (such as chaga) are particularly at risk.

2.7.3 RECOMMENDATIONS AND REQUESTS

Based on the above concerns and anticipated impacts of the Project on vegetation and wetlands, Nibinamik provides the following request and recommendations:

- Nibinamik involvement in consultation, oversight, decision making, and development and implementation of vegetation habitat fragmentation mitigations;
- An acknowledgement in the Vegetation & Wetland assessment of significance section: shifts in vegetation and wetland communities should be assessed as "significant" due to the extensive edge effects and invasive species proliferation expected and described above;
- To appropriately mitigate the substantial risks to culturally and ecologically important vegetation communities, an assessment of "significant" should be assigned to the predicted net effect of "loss or alteration of vegetation communities, species and biodiversity."
- An expanded description of "moderate" and "high" vegetation and wetland impacts to encompass at least a 150-m buffer around the entire Project Footprint;
- Nibinamik involvement in consultation, oversight, decision making, and monitoring of vegetation communities and wetlands during all Project phases;
- A commitment to developing and implementing an invasive species risk assessment and management plan prior to construction, and implementation strategy for this plan, in collaboration with Nibinamik. Nibinamik requests that invasive species control is applied but do not consider the use of herbicides (or pesticides) as part of the management program);
- Vegetation that provides country foods or medicines must not be impacted by herbicides or pesticides (used by either this Project Proponent(s), or RFDs). Nibinamik requests a monitoring program is established (designed and implemented collaboratively with Nibinamik) to sample country foods and ensure members health and safety.
- The potential impacts of intentional tree species suppression by the logging industry must be included in the cumulative effects assessment.

2.8 WILDLIFE AND WILDLIFE HABITAT

The below subsections relate to the Nibinamik review of Section 12 (Wildlife and Wildlife Habitat) as well as relevant content within Section 13 (Species at Risk).

2.8.1 SUMMARY OF DRAFT EA/IS CONTENT

The potential effects of the Project on wildlife and wildlife habitat were common across all receptors and criteria, and include:

- Habitat Loss
- Habitat Alteration
- Degradation
- Alteration in Movement
- Injury or Death.

With the implementation of mitigation measures, the Draft EA/IS asserted that effects would be adequately mitigated or not expected to cause net effects. For this reason, no further assessments were conducted.

Significant Wildlife Habitat

A Significant Wildlife Habitat (SWH) Ecoregional Criteria Schedule had not been developed for the study areas, so the Draft EA/IS used the Significant Wildlife Habitat Technical Guide, with aid of the Significant Wildlife Habitat Technical Guide Criteria Schedules for Ecoregions 3E, and 3W. Twelve (12) SWH were identified for mammals, but the majority of SWH types did not have field investigations performed:

- Moose Late Winter Cover
- Moose Calving Areas
- Bat Hibernacula
- Bat Maternity Colonies
- Seeps and Springs
- Aquatic Feeding Habitat
- Denning Sites for mink, otter, grey wolf, eastern wolf, Canada lynx, American marten, fisher, black bear
- Wolf Rendezvous Sites
- Mast Producing Areas

- Cervid Movement Corridors
- Furbearer Movement Corridors
- Forest areas providing a high diversity of habitats.

Key Species and Species Groups

The following species and species groups were selected in the Draft EA/IS as key species for the assessment of effects on wildlife and wildlife habitat: moose, furbearers (marten and beaver), bats, migratory songbirds, waterfowl (Canada goose and mallard duck), shorebirds, raptors and herpetofauna (reptiles and amphibians). They were chosen based on background information, field surveys, and Indigenous input.

Study Areas

Three (3) study areas were selected for the assessment of impacts on wildlife and wildlife habitat: (1) the Project Footprint, (2) the LSA (1-km buffer from preferred route), and (3) the RSA (5-km buffer from preferred route). The lone exception was for moose, which the LSA boundary was determined to be an 11-km buffer from the preferred route.

Potential Net Effects

After the implementation of proposed mitigation and enhancement measures, which include: avoiding sensitive habitats; developing a vegetation and invasive species management plan and a wildlife monitoring plan; using existing roads to minimize habitat destruction; reclaiming temporary disturbed areas; minimizing dewatering; enforcing speed limits; and considering wildlife crossings or passages, the Draft EA/IS predicts the following net effects on wildlife and wildlife habitat:

Moose

- Habitat loss and loss of connectivity
- Increased chance of injury or death caused by road activities, collisions, and changes in predator-prey dynamics

Overall, the Draft EA/IS determined that the magnitude was low for all effects, except for habitat loss from clearance activities which was moderate. This resulted in net adverse effects for moose to be considered not significant.

American Marten and North American Beaver

- Habitat loss and alteration (hydrological changes, habitat composition, loss in connectivity)
- Injury or death caused by road activities, collisions, and changes in predator-prey dynamics

Overall, it is determined that the magnitudes of the net effects were all negligible or low, except for habitat loss from clearance activities and injury or death caused by increased access which were determined to be moderate.

Bats

- Habitat loss, alteration or degradation (hydrological changes, sensory disturbances, loss of connectivity)
- Incidental injury or death

Overall, the Draft EA/IS determined habitat loss caused by clearing activities, habitat alteration or degradation, loss of connectivity and alteration of movement to be of moderate magnitude for bats. The remaining potential effects were determined to be negligible or low.

Forest Songbird

- Habitat loss, alteration, and degradation (hydrological changes, loss of connectivity, sensory disturbances)
- Injury or death caused by road activities, collisions, and changes in predator-prey dynamics.

Overall, the Draft EA/IS determined habitat loss caused by clearing activities, habitat alteration or degradation due to changes in vegetation and sensory disturbance, and alterations in movement caused by loss of connectivity and sensory disturbances to be of moderate magnitude for forest songbirds.

Wetland Songbirds

- Habitat loss, alteration, and degradation (hydrological changes, loss of connectivity, sensory disturbances)
- Injury or death caused by road activities, collisions, and changes in predator-prey dynamics.

Overall, the Draft EA/IS determined habitat loss due to clearing activities, injury or death caused by collisions and changes to predator-prey dynamics to be of moderate magnitude for wetland songbirds. The remainder of the net effects were considered negligible or low.

Shorebirds and Waterfowl

- Habitat loss, alteration, and degradation (hydrological changes, loss of connectivity, sensory disturbances)
- Injury or death caused by road activities, collisions, and changes in predator-prey dynamics.

Only the predicted net effect of injury or death caused by increased access was predicted to be moderate for these bird species; the rest were negligible or low.

Amphibians and Reptiles

- Habitat loss, alteration, and degradation (hydrological changes, loss of connectivity, sensory disturbances) for amphibians,

- Injury or death of amphibians caused by road activities, collisions, and changes in predator-prey dynamics.

Habitat loss caused by clearing activities and habitat alteration caused by structural changes, as well as loss of connectivity, and injury or death were considered moderate by the Draft EA/IS. The remaining predicted net effects on amphibians and reptiles were considered either negligible or low.

Based on the Draft EA/IS's methodology for significance determination, all net effects were determined to be not significant for wildlife and wildlife habitat.

2.8.2 EVALUATION

Significant Wildlife Habitat

For the majority of potential SWH types along the proposed WSR, no field investigations were completed (AtkinsRéalis, 2025). These features are difficult and complex to detect, which is acknowledged in the report. However, bear, wolf, and fox denning sites; wolf rendezvous areas; mineral licks; bat hibernacula; bat maternity roosts; and caribou and moose nursery/calving sites represent highly significant habitat features which are perennially occupied, sometimes for a century or more (Gallant, 2014; Gretchen H. Roffler, 2018). Not completing field investigations to identify crucial SWH is not sufficiently rigorous to minimize risk to important wildlife species. The loss or degradation of these discrete sites may represent a significant impact to local occupancy and productivity of valued species and SAR.

The risk of losing discrete and significant features such as mineral licks, perennial den sites, or hibernacula remains an unassessed and unmitigated impact. Nibinamik is also concerned that the Draft EA/IS does not specify that these impacts are unknown and pose a high risk for various VCs within the LSA/RSA. Furthermore, well-considered adaptive management and mitigation plans would work to reduce impacts to SWH features, should they be discovered.

The effects caused through the Project development include RFDs which will impose many of the same cumulative effect on wildlife – especially habitat loss and degradation. Nibinamik is concerned not only for impacts directly or indirectly to wildlife, but to wildlife heath and in-turn to the safety and availability of country foods. Potential product use as part of RFDs (e.g., pesticides, chemical treatments, herbicides) would introduce a variety of contaminants into the food web, beyond those associated with this Project, which will impact wildlife health and the health of Nibinamik members through the consumption of country foods.

Habitat Fragmentation

Roads are known to create substantial fragmentation effects within wilderness areas (Ament, 2008). This occurs through the conversion of interior habitat to edge habitat, and results in decreased habitat function and productivity for many species, including those which are wide-ranging or large-territory dependent (Committee on the Statue of Species at Risk in Ontario, 2015; Carr, 2011).

This fragmentation alters microclimates along the road (i.e. changes average temperatures, solar exposure, and drainage), which can result in significant changes to adjacent vegetation communities (Watson, 2005) (and as described in the Vegetation and Wetlands section of this review). These altered habitats often transition from mature systems toward successional, disturbance tolerant, and invasive plants (Watson, 2005).

The proposed linear roadway infrastructure, its traffic, and alterations to vegetation communities would all serve as barriers to wildlife movement. While a road may not entirely restrict wildlife from crossing, fragmentation increases the cost of movement and disrupts wildlife through a combination of mechanisms (Bekker & Luell, 2003; Madadi et al., 2017; Mychasiw & Hoefs, 1988; Watson, 2005 ;):

- Traffic, including development-associated aircraft (e.g., helicopters), induces stress responses and startles wildlife away from the road, which is energetically costly. This noise and human activity may create functional habitat loss as far as 15 km away;
- Exposure (i.e. lack of cover) while crossing a road may induce wildlife to alter movement pathways by increasing distance travelled, being forced through suboptimal or difficult terrain, or altering time-of-day for movement;
- Linear corridors increase hunting efficiency of predators such as coyotes, wolves, and bears, resulting in increased predation impacts on prey species such as caribou (and competitors such as wolverine), as well as migration disruption due to further road avoidance;
- Roads may alter competition, disease, and parasitism dynamics, by enabling new species to enter and occupy previously undisturbed interior habitats;
- Road mortality for wildlife increases with each new road and every additional vehicle through the region;
- Edge effects alter roadway vegetation communities, which can cause significant direct and indirect functional habitat losses;
- Introduction of contaminants into the food-web through road maintenance and other developments (e.g., dust and dust-suppressant products, herbicides, pesticides).

Due to the various mechanisms of impacts described above, Nibinamik recognizes that mitigating habitat fragmentation is complex and difficult to achieve. Therefore, it is critical that long-term management plans be created and thoroughly implemented to prevent the proposed, and potential future, cumulative effects on the region's ecology. This should include, among other things, measurable mitigation targets, limiting harvesting and access along the road, ongoing monitoring, seasonal shut-downs to facilitate wildlife movement, invasive species monitoring and management, and long-term research.

Bats

In 2023, COSEWIC listed three (3) additional bat species (hoary bat, eastern red bat and silver-haired bat) as federally Endangered (Canada, 2023). All of these species occur within the LSA.

Expected impacts and cumulative effects on bats are asserted by to be not "significant." Beyond issues identified in the significance determination process, this assessment does not yet account for the three (3) recently and additionally listed SAR bats noted above.

Information presented in the Draft EA/IS is lacking with respect to bat habitat use within the LSA/RSA, which creates a risk that impacts to bats would be greater than acknowledged in the Draft EA/IS. Incidental surveys for bat hibernacula (i.e., aerial surveys at 100 km/h from 100 m altitude) are not sufficient to comment on the presence/absence of these features, as acknowledged in the Draft EA/IS. No ground truthing has yet been conducted for the presence of bat hibernacula. If hibernacula are altered, destroyed. or otherwise compromised by the proposed WSR, there could be significant regional impacts to SAR bats.

The Draft EA/IS currently states that no bat maternity roosts were confirmed during field surveys. However, no suitable surveys were actually conducted to examine for bat maternity roost sites. This discrepancy, potentially representing purposefully misleading statements, raises concerns about the veracity of the bat assessment, and assessment as a whole. Impacts to bat maternity roosts are unknown and are an unmitigated risk of the proposed WSR.

Moose

The assertion that the net adverse effects on moose is considered not significant (AtkinsRéalis, 2025) is not substantiated. Especially within the RSA, the cumulative effects of multiple novel roads and mines will certainly cause increased moose mortality due to interactions with hunters, vehicles, and predators (Dickie, 2017; Laurian, 2008). The extent of this potential mortality is not known nor modelled in the Draft EA/IS, and could range anywhere from low to very high magnitude, relative to moose populations within the RSA.

The cumulative effects assessment acknowledges that additional roads have a multiplicative effect on moose mortality. Furthermore, there is a distinct lack of predictive information provided in the Draft EA/IS to comment on future moose mortality. As such, the determination of cumulative impacts on moose as "not significant" is not appropriate nor substantiated.

Nibinamik notes that it is possible that moose will shift occupancy away from these new developments, or that local (LSA and/or RSA) populations will decline due to increased mortality and habitat loss. Moose are known to avoid roadways (up to at least 1,000 m), which would create substantial functional habitat loss along the proposed WSR (Beazley et al., 2004). Despite overall avoidance, moose may also selectively—and seasonally—access road edges, seeking sodium-rich vegetation, increasing their risk of road mortality and interactions with hunters (Laurian, 2008).

Any of these potential changes to movement patterns, mortality, or occupancy could significantly (and/or seasonally) reduce moose availability for local hunters and harvesters, and negatively impact Nibinamik's Aboriginal and treaty rights. The proposed WSR also has a high likelihood of influencing levels of legal recreational and subsistence moose hunting by non-locals, as well as potentially enabling illegal poaching. In light of the myriad impacts to this complex, and culturally important species, Nibinamik asserts that the potential impacts to moose in the LSA are "high" magnitude and that the cumulative effects are "significant."

Caribou

Boreal (i.e. woodland) caribou have been in decline for more than a century, resulting in near extirpation from the southern 40% of their range (Committee on the Statue of Species at Risk in Ontario, 2015). This decline has been strongly linked to human development and settlement activities (Environment and Climate Change Canada, 2019). Formerly productive caribou habitat has been altered such that it supports smaller and more precarious herds. Simultaneously, this altered habitat promotes competitors such as white-tailed deer (which can shift northward) and moose, while improving prey access and availability for predators like grey wolf and black bear (Curveira-Santos, 2024).

The proposed WSR would create a large, novel, ongoing habitat fragmentation impact within the Missisa herd range, a partial fragmentation of the Ozhiski herd, and would also exert an impact on eastern migratory caribou of the Southern Hudson Bay herd. Furthermore, it would set the stage for major future cumulative effects to these herds from developments associated with the road (including forestry and mining impacts).

The largest concentrations of caribou detected and discussed within the Draft EA/IS—through aerial surveys, collaring data, and potential caribou nursery sites—all point toward high habitat suitability and high occupancy around Winisk Lake (AtkinsRéalis, 2025). The proposed road would bisect this high suitability (Category 1) caribou calving and winter area as well as seasonal use habitats (Category 2).

As acknowledged in the Draft EA/IS, both woodland and eastern migratory caribou select large, mature, contiguous blocks of undisturbed areas for their Category 1 and 2 habitat needs: The cumulative effects assessment acknowledges that the impacts to woodland caribou (Missisa herd) will be “high” and “significant” for every metric listed (AtkinsRéalis, 2025). This road through confirmed Category 1 (nursery and winter habitat) and Category 2 (seasonal range) habitats for both woodland and eastern migratory caribou sets the stage for very significant impacts to caribou within the RSA.

These impacts to caribou are likely to include a combination of the following significant impacts from the WSR, exacerbated by the cumulative effects of various other projects (Dickie, 2017; Environment and Climate Change Canada, 2019; Madadi, H., Moradi, H., Soffianian, A., Salmanmahiny, A., Senn, J., & Geneletti, D., 2017):

- Decreased occupancy (i.e. a downgrade of local habitats from Category 1/2 to Category 3);
- Decreased body and health condition (due to increased travel distances and increased anthropogenic disturbance);
- Increased predation (wolf efficiency along linear features and, predator mediated apparent competition effects) and;
- Population declines (loss of suitable Category 1 habitats leading to decreased recruitment, coupled with increased predation).

Functional habitat loss around roads is also of considerable concern, as numerous studies indicate that caribou often avoid anthropogenic disturbances by up to 15 km (Carr, 2011; Environment and Climate Change Canada, 2019; Committee on the Statue of Species at Risk in Ontario, 2015). This could mean that current Category 1 and 2 caribou habitat within the LSA and RSA could become unsuitable due to functional habitat loss as a result of the WSR, in addition to direct loss due to the road footprint.

Wolverine

Wolverine, a Threatened SAR, is present in Ontario because of large contiguous natural areas of undeveloped wilderness. In many circumboreal parts of the world, wolverine have been extirpated or drastically reduced due to development (Scrafford M. C., 2025). For this elusive species, both population size and habitat occupancy go down as road density goes up (Ontario Wolverine Recovery Team, 2013). Improved hunting efficiency of wolves along roads may also be an important impact for wolverines—as potential competitors, wolves sometimes kill wolverines (Scrafford M. A., 2018).

Appropriately, the Draft EA/IS acknowledges a high level of uncertainty concerning residual effects on wolverine caused by the Project and states that cumulative effects will be "significant." Most research suggests that wolverine populations decline in landscapes with roads (Scrafford M. C., 2025). The improved hunting efficiency and access for wolves described above (Dickie, 2017) also exerts competition and predation impacts on wolverines.

Other Furbearers

Predators, furbearers, and other valued wildlife species will also be negatively affected by proposed WSR development. The mechanisms of habitat fragmentation described in detail at the start of the Draft EA/IS Section 12 would have lasting impacts on all species in the vicinity of the Project, based on habitat needs, size of home range, migration patterns, and other species-specific factors.

Opportunist and predator species (i.e. birds of prey, corvids, wolves, bears, etc.) may experience more efficient hunting and movement (Dickie, 2017; Curveira-Santos, 2024) along the road—reciprocated by road avoidance in prey species. However, travelling along the road also increases the risk of road mortality for bears, wolves, lynx, and others. Using the road corridor would also expose these predators to increased pressures from hunting and poaching.

Pine marten was the most commonly recorded mammal species during baseline studies for the Draft EA/IS (AtkinsRéalis, 2025). Linear features, depending on their size, type, and density, are known to impact the movement patterns and habitat occupancy of martens (Tigner, 2015). The WSR would thus, very likely, impose localized impacts on martens with habitat ranges overlapping the proposed Project.

INCREASED HARVESTING AND HUNTING PRESSURES

New roads create major opportunities to access natural resources, especially in areas with previously complex access such as the Project area. The completion of the WSR would immediately expose timber, wildlife, plants, fungi, and minerals to increased harvesting levels and greatly enhance the risk

of over-exploitation (Bekker H. &., 2003; Mychasiw & Hoefs, 1988). Legal sport and subsistence hunting as well as some illegal poaching are expected to increase with creation of a road. Many Canadian case studies bear witness to overharvesting after the development of new roads into wilderness areas (Mychasiw, L., & Hoefs, M., 1988).

Some existing remote camps may be negatively affected, while some external fish and hunt guiding operations may also expand in the wake of WSR completion, with a significant risk of increased pressure on local ungulate, predator, and furbearer populations (Mychasiw & Hoefs, 1988; Watson, 2005).

Raptors, Common Nighthawk, and Other Bird Species

As acknowledged in the Draft EA/IS, the expected cumulative effects on common nighthawk, red-tailed hawk, and great grey owl are all expected to be "significant" with "moderate" to "high" impacts on these species expected over the long-term. However, Nibinamik is concerned that high-value nesting sites discovered during road construction may not be adequately protected due to a lack of a proactive adaptive management planning.

The Draft EA/IS states that cumulative effects to forest and wetland birds will be moderate but "not significant." However, there is potential for substantial and unmitigated impacts to these VCs, nearly all of which are in decline (Rosenberg, 2019). The boreal forest currently serves as a critical nursery ground for over 300 species, and produces billions of juvenile birds every year (Stralberg, 2019). The extent of impacts to birds from adding roads to previously undeveloped wilderness, especially in conjunction with a rapidly warming boreal region, remains unknown and unmitigated.

2.8.3 RECOMMENDATIONS AND REQUESTS

Nibinamik is concerned that Project impacts to wildlife and birds and their habitats have been consistently minimized in the Draft EA/IS. Uncertainties and limited details have not provided sufficient confidence that residual effects have been appropriately characterized in the Draft EA/IS. Nibinamik provides the following recommendations and requests based on these themes:

- Additional ground-truthing work and engagement with Nibinamik, within proposed Project Footprint, to confirm and avoid potential, discrete, high-value SWH features such as mineral licks, denning and rendezvous sites, hibernacula, calving habitat etc.
- Develop a robust adaptive management plan in conjunction with Nibinamik, to mitigate impacts to SWH features should they be discovered;
- Consultation, oversight, decision making and involvement in:
  - the development of detailed monitoring plans for the road's construction and operation, including records and analysis of hunting and harvesting in the region;
  - the development and implementation of habitat fragmentation mitigations;
  - the development and implementation of caribou impact mitigation planning;

- the development and implementation of wolverine mitigation planning;
- the progression of new commercial guiding operations in the region;
- access permission control along the proposed road;
- the permitting of forestry and mining operations & developments;

- Ground truthing of the highest likelihood potential hibernacula sites should be conducted during a seasonally appropriate timeframe (swarming/pre-overwintering) including the use of active and passive ultrasound acoustic detectors. An updated assessment of the significance of impacts and cumulative effects on the newly listed tree bats: hoary bat, eastern red bat and silver-haired bat should also be added to the Draft EA/IS.
- Ground truthing of the highest likelihood potential hibernacula sites should be conducted during a seasonally appropriate timeframe (swarming/pre-overwintering) including the use of active and passive ultrasound acoustic detectors.
- Assessment of significance for impacts and cumulative effects on moose upgraded to “high” magnitude and “significant”;
- Enhancing the Draft EA/IS’s description of direct and effective habitat loss for caribou to account for the known avoidance of developments and anthropogenic disturbances by as much as 15 km;
- Provision of a memorandum report on the caribou that was killed during the collaring program;
- Road mitigation planning to include seasonal shutdowns when caribou migration or calving is present near the proposed road;
- Webequie and other regional road proponents to collaborate on a large-scale boreal bird conservation plan. This plan should incorporate best practices into regional bird conservation (e.g., retaining robust protected refugia, stepping stones, and corridors), and support research into region-specific best practices for conserving this major population of North American breeding birds.
- Adaptive management and mitigation planning must occur, with Nibinamik involvement, to avoid high-value nesting sites for nighthawk, red-tailed hawk, and great grey owl if/when discovered.
- Commitment to integrating wildlife passages and corridors in the road design, based on the best-available science and IK.

2.9 SOCIAL ENVIRONMENT

2.9.1 SUMMARY OF DRAFT EA/IS CONTENT

Section 14 of the Draft EA/IS is an effects assessment of the Project on the social environment. The Draft EA/IS defines the study areas of the Social Environment Effects Assessment as:

- Project Footprint: the area of direct disturbance of the Project, a 35-m wide ROW of the proposed route;
- Local Study Area (LSA): the area within which direct and indirect effects are likely to occur: 8 First Nations surrounding the WSR Project, including Nibinamik; and
- Regional Study Area (RSA): the area within which indirect and/or cumulative effects are likely to occur, which includes the LSA and communities within the Kenora, Thunder Bay, and Cochrane districts.

The assessment of effects on Social Environment was conducted based on the following VCs, identified in the Project TOR:

- Population and Demography
- Housing and Temporary Accommodations
- Community Services
- Education, Training and Traditional Learning
- Emergency and Protective Services
- Community Infrastructure
- Community Well-Being and Safety

Many Project activities during both the construction and operation phases were identified as interacting with the Social Environment VCs, including vegetation clearing, construction of the road and waterbody crossings, aggregate extraction, operation, maintenance and repair of the road, and pits and quarries and emissions and discharges.

The Draft EA/IS identifies baseline conditions for communities in the LSA and RSA based on publicly available data sources such as census data, community websites and Comprehensive Community Plans (CCPs), where applicable, as well as community surveys, interviews, and focus groups (community-specific data was not collected from Nibinamik). Indigenous Knowledge and Land and Resource Use information was also incorporated where available.

Out of the 22 First Nations and Métis communities in the RSA and LSA, only three (Webequie, Marten Falls and Weenusk First Nation) provided IKLRU information and have completed community-based land use plans. Therefore, most of the baseline and existing conditions information is tailored to these First Nations. Consequently, the rest of the assessment—which includes the

impacts of the WSR Project on the social environment, proposed mitigation, follow-up and monitoring measures, determination of significance and cumulative effects assessment—is tailored to these First Nations.

Based on the methodology used in the Draft EA/IS for the determination of significance, only 3 out of 12 net effects are predicted to be of moderate or high significance, while the remaining nine (9) are predicted to be of low significance. Only the three (3) net effects predicted to be of moderate or high significance—Community Cohesion, Community Safety, and Traffic Safety—are carried forward to the cumulative effects assessment.

The Draft EA/IS has proposed mitigation measures for the impacts of the Project on the Social Environment and Community Well-Being, including:

- Community programs such as cultural and family events;
- Cultural awareness training for non-local workers;
- A traffic management plan;
- A community readiness plan;
- An emergency response plan; and
- Safety measures to prevent violence against women and ensure there are strict drug and alcohol policies.

A Socio-Economic Monitoring Program is also proposed, which will include measures to ensure the Project contributes to the economic empowerment of local First Nations, grievance monitoring, and long-term monitoring of impacts of the Project.

2.9.2 EVALUATION

The WSR could have both positive and negative impacts on the social environment and community well-being in Nibinamik. These impacts are detailed below, as well as the importance of Nibinamik-specific studies in the evaluation of impacts, determination of signification, and proposed mitigation and follow-up measures.

Potential Impacts of WSR on Nibinamik's Well-Being

The WSR Project is located near Nibinamik's Homelands, where community members regularly engage in traditional activities such as hunting, trapping, and fishing within and around the Project Footprint and LSA. Although Nibinamik has yet to complete an extensive IKLRUS, there is some available information that was drawn on for the purpose of this review. Though limited, available data show that community members have historically and still use the land and resources on their Homelands for subsistence, cultural, and ceremonial purposes.

Some Nibinamik community members live in and around Webequie First Nation, and some Nibinamik members frequently travel to Webequie to visit family and friends, and to practice traditional activities such as hunting, fishing, trapping, and gathering. Community members use the winter road that connects Nibinamik and Webequie during the winter months, and travel by boat in the summer, using the river and lake network that connect the two communities. The available data can not be interpreted as being representative of Nibinamik First Nation as a whole. However, they demonstrate that the Project will have direct, indirect, and cumulative impacts on Nibinamik's rights and interests, and ultimately on their well-being and safety. As detailed in section 2.10.3 of the Draft EA/IS, further studies are necessary to determine baseline conditions, impacts, and mitigation measures specific to Nibinamik.

Community well-being is a top priority for Nibinamik leadership and community members, especially as the community faces significant health challenges related to drug and alcohol use, mental health, and youth suicide, as well as high rates of diabetes. While Nibinamik recognizes the potential benefits of all-season road access, any development must prioritize the health and well-being of the community and uphold Nibinamik's governance over their Homelands.

Community members shared their visions for potential benefits and concerns about improved road access within the Nibinamik Homelands, including:

Potential Benefits

- The winter road season is getting shorter due to climate change, which shortens the window for Nibinamik to transport supplies into the community. Having easier access would allow Nibinamik to have more reliable year-round access to supplies, food, and goods.
- Year-round access would also lower the cost of supplies such as food, construction supplies, gas, etc.
- Development around Nibinamik could bring training and job opportunities for community members.
- Increased access to friends and family in surrounding communities.
- Easier access to the land for youth and future generations allowing them to continue to hunt, fish, harvest, and live off the land.
- Increased access to healthcare and emergency care.
- Easier to evacuate when there are emergencies such as forest fires.
- Increased economic development opportunities. Since Nibinamik is not recognized as a "reserve" by the federal government, the Nation has limited access to funding and support.

Concerns

- Community safety and well-being is a priority for Nibinamik. Most members that provided input on WSR mentioned the concern that all-season road access in the region will facilitate drug and alcohol transportation to the community.

- Members are concerned about increased rates of missing and murdered Indigenous women and children resulting from road access to Nibinamik and the region.
- Members fear that development will deepen existing social challenges; some feel the community needs healing before moving forward.
- Members note that youth are already losing connection to traditional practices, relying more on store-bought food (which has been linked to rising diabetes rates), and there are concerns that year-round road access might exacerbate these challenges.
- Members are concerned that there will be an increase in loss of language, cultural identity, and traditional place names through easier access.
- Members are concerned that the Draft EA/IS does not represent their community well-being needs due to the lack of community-led data and information.
- The RA has a community-specific approach to assessing well-being. However, members are concerned that Project sequencing will not allow the RA to inform WSR construction and Ring of Fire access.

All of the above factors, as well as the information that will be gathered during the IKLRU and baseline studies, need to be reflected in WSR's Final EA/IS to allow Nibinamik to make informed decisions on and participate meaningfully in the Project.

information Gaps for the Determination of Existing Conditions, Effects Assessment, and Mitigation and Monitoring Measures

Overall, there are significant gaps in the Draft EA/IS as it relates to accurately reflecting the potential benefits and challenges of the Project for Nibinamik. Further studies, such as IKLRU and existing baseline conditions, are needed to determine the road's potential impacts to Nibinamik's well-being and social environment, and to allow Nibinamik to make an informed decision on the Project. This information is also critical to adequately assess Project impacts, implement mitigation measures, and develop monitoring and follow-up programs specific to protecting Nibinamik Rights. Completing the formal RA prior to the Final EA/IS for the Project would also relieve many of the uncertainties regarding the road's potential effects on Nibinamik community well-being.

Cumulative Impacts on Nibinamik's Well-Being

The WSR is proposed to increase access between Webequie First Nation and the McFaulds Lake Area. The Project also inserts itself into the broader development strategy around the Ring of Fire and creating road access for industry to these mineral deposits. Therefore, the WSR will lead to additional development within and around the Nibinamik Homelands, resulting in broader and cumulative impacts on community well-being. These will almost certainly include increased opportunities for development of the area in industries such as mining, forestry, and hydro, as well as the construction of additional roads, and expanded opportunities for sport hunting and fishing. Such developments will place greater pressure on fish and wildlife populations and their habitats, and negatively impact Nibinamik members' ability to exercise their Aboriginal and treaty rights.

2.9.3 RECOMMENDATIONS AND REQUESTS

Nibinamik presents the following recommendations specific to the assessment of impacts of WSR Project on Nibinamik community well-being and social environment, as well as suggested mitigation measures and monitoring programs:

- **Provide Support for Nibinamik-Specific IKLRU Study and Baseline Studies**
  - The WPT must provide funding and capacity support for a Nibinamik-specific IKLRU study.
  - The WPT must provide funding and capacity support for Nibinamik to complete a baseline study to determine the existing conditions for socio-economic, health, safety, etc.
  - Develop specific mitigation and enhancement measures in partnership with Nibinamik, based on IKLRU study results, community engagement, and identified concerns.
  - The IKLRU and baseline study, and an assessment based on their findings, must be completed prior to any decision on the Project.
- **Enhance Safety and Protection Measures**
  - Implement access controls such as checkpoints along the roads, permit systems, and/or community-based patrols to control and monitor the flow of vehicles and goods.
  - Implement missing and murdered Indigenous women and girls safety strategies, in collaboration with Nibinamik.
  - Provide capacity for a community-based emergency response program
- **Provide Support for Childcare, Youth Services, and Cultural Healing and Revitalization Programs**
  - Ensure availability of childcare and youth services for Indigenous community members participating in training programs or working on the road to support equal access to employment and training opportunities.
  - Provide funding to support Nibinamik's land-based learning and land-based healing program.
  - Provide capacity support for cultural maintenance and revitalization programs, including Nibinamik's land-based healing program, and other language immersion and traditional food harvesting initiatives.
- **Leadership-to-Leadership Engagement**
  - Facilitate opportunities for leadership-to-leadership discussions to ensure meaningful, respectful, and informed engagement with Nibinamik.

- **Equitable Access to Training and Employment**
  - Training and employment opportunities must reflect Nibinamik's specific needs and realities.
- **Community Readiness Plan**
  - Ensure Nibinamik representation in the Project Community Readiness Plan (CRP) Working Group. The CRP should also expand its scope to other communities in the LSA, as it is currently largely focused on Webequie First Nation.
- **Cumulative Effects Assessment**
  - The cumulative effects assessment must include all Indigenous communities in the LSA, accounting for potential impacts from future activities such as tourism, outfitting, forestry, mining, hydro development, and other road-linked projects.
  - Mitigation and enhancement measures must be developed based on the findings.
  - Provide support for Nibinamik to develop a community-led monitoring program that oversees the impacts of development in the region.

Impacts of the WSR on Nibinamik community well-being and the social environment must be assessed independently from other First Nations, recognizing their distinctive rights, interests, culture, and governance of their Homelands, especially given Nibinamik's proximity to the project.

2.10 ECONOMIC ENVIRONMENT

2.10.1 SUMMARY OF DRAFT EA/IS CONTENT

This Project is intended to be an economic driver for regional mineral development and the community of Webequie. This impact is assessed at a regional and local scale including labour employment and income, overall economy, business environment, and the public and Indigenous community finances.

A number of comments received through engagement or consultation are noted to form part of the economic assessment or other assessment components. Additionally, the Draft EA/IS has noted in the overview of this section to have addressed a number of key concerns, or information shared through IK. The IK applied was primarily sourced from the IKLRU program, which was offered for Nibinamik participation, but as noted above in Section 2.1, this process was problematic. However, this concern is not further addressed as part of this technical review in relation to the economic environment.

Webequie has provided community planning documents to support the Project, but no other community-originating planning material was included. A monitoring and follow-up program is a proposed mitigation, but specific details, such as consideration for the Nations with the LSA, are not included. The LSA covers several First Nations, including Nibinamik, while the RSA covers the

districts of Kenora, Cochrane, and Thunder Bay. The Draft EA/IS anticipates no negative effects as a result of the Project and mitigations are considered to be Project enhancements.

Labour, Employment, and Income

This section outlines the existing economic conditions within Webequie First Nation and the broader study areas. The assessment found that the RSA has a lower labour participation rate compared to the rest of Ontario, although most of the population in the RSA is in the labour force. The Thunder Bay District (within the RSA) has the highest unemployment rate at 10.8%, which is below the Ontario average, while the Kenora District has a lower unemployment rate but also a lower participation rate.

The section also notes that barriers to employment exist in Indigenous communities within the LSA and RSA. The Draft EA/IS states that Webequie's labour force is a key consideration for the Project, and employment from the Project will create positive economic effects. The Draft EA/IS recognizes that

> *Within First Nation communities the Project effects on the traditional economy are not captured within traditional statistics collections such as the Census of Population. Additionally, due to the governance of First Nation reserves, employment activity captured within the community and government services category could include employment in reserve owned businesses such as accommodations on reserve land. These factors may result in an under or over representation of labour skills within the community" (AtkinsRéalis, 2025, pp. 15-43).*

The assessment forecasts that the majority of employment opportunities will go to individuals from Webequie, with a smaller proportion going to residents of other LSA communities, including Nibinamik. However, the report also acknowledges that a substantial portion of the labour force, particularly for the construction phase, will still be sourced from the broader RSA due to the limited local labour supply. The operations phase will also lead to continued employment and increased household spending in the LSA and RSA, though the number of permanent positions and the magnitude of positive effects are considered to be low.

Proposed impact mitigations include procurement policies, workplace policies, and continued workforce planning to enhance local employability and work conditions. The WPT strategy is intended to help the communities benefit from employment and business opportunities related to the Project. These measures are designed to align with Webequie community plans. With this Project anticipated to have a positive impact, there is no cumulative effects assessment carried forward.

Overall Economy

The cost of living in Webequie and other remote LSA communities is significantly higher than in urban areas, which creates a challenge for residents, particularly in accessing healthy and affordable food. The document explicitly recognizes the importance of the traditional economy, which includes hunting, fishing, and trapping, as a critical component of the community's livelihood and cultural practices. Traditional activities are not merely a leisure pursuit but are integral to the economic

drivers in the LSA. The Project is expected to have multiple positive effects beyond traditional economies, including: (1) increased gross domestic product of the LSA and RSA, (2) improved cost of living conditions, (3) improved employment opportunity, and (4) increased local business activity. Positive impacts are anticipated to be most prominent within the community of Webequie.

Proposed mitigation also includes a flexible work schedule to address the potential impacts on the traditional economy. The mitigation section further reflects on implanting any consideration from other disciplines such as the environmental or socio-economic concerns to reduce impacts on the conditions that support the traditional economy.

Business Environment

The business landscape section discusses the relative changes in the sectors of employment and their relative value change. The Draft EA/IS identifies the main employers in the area as the Webequie First Nation government, the Nishnawbe Aski Nation's Keewaytinook Okimakanak Council, and the Northern Store (public administration, healthcare and education have been the main categories of growth). Webequie has identified 856,000 hectares as an area of interest for mineral development and forestry as part of land use planning. A key concern, because of the community's remoteness, is that the Project may result in a "leakage" of economic benefits as local businesses may not be able to meet the supply needs of the Project.

Within the LSA, the main areas of employment and business growth include construction, retail trade, healthcare, and public administration. Tourism represents approximately one quarter of the economy and jobs, but has declined slightly in recent years. The assessment notes that the traditional economy is a significant part of the community's business environment. The Draft EA/IS also considers the potential for the Project to affect existing aggregate and forestry operations in the LSA, which are relevant to the local economy and supply chain.

The Draft EA/IS acknowledges the presence of 13 mining operations and 12 operators within the RSA. This contributes approximately $6.9 billion to Ontario's gross domestic product (GDP), with indirect benefits estimated at closer to $12 billion. Forestry is noted to be a significant GDP contributor ($18 billion) as well as a key employer of Indigenous Peoples (9,000 of the 147,000 jobs). The Draft EA/IS notes that direct Indigenous ownership of forestry businesses has grown to 18%.

The potential change to the business environment resulting from the Project is anticipated to be from the construction phase and creation of opportunities for local businesses. This includes the LSA supplying the Project with labour, materials, and equipment. While the Project will provide opportunities for new businesses and business growth, this will be limited within the Webequie community due to the small number of existing businesses and the capacity of Webequie to provide supply chain industries. The leakage from limited capacity in Webequie and the LSA is anticipated to result in a large portion of the Project's requirements being met by businesses in the RSA.

Project enhancements consider:

- Robust procurement policies to involve Indigenous-owned businesses and strategies to support Indigenous hiring.

- Set-asides for Indigenous business are noted as tentative due to the limited capacity of Webequie and uncertainty of capacity within the LSA.
- Scalable contracts and training to promote skill development and sustainable business growth.

Public and Indigenous Community Finances

First Nations' finances are reported to the federal government and included in the assessment, though not provided in the Draft EA/IS to maintain confidentiality. Communities in the RSA have experienced differential changes in GDP; declines in Kenora and Cochrane districts, with growth in the Thunder Bay District. Project-related changes are predicted to be positive, with an increase in community finances in the LSA and the RSA. The Project is assumed to generate increased tax revenue for both the federal and provincial governments, which could be used to support future infrastructure and services. The Draft EA/IS also anticipates that the Project will have a positive effect on Indigenous community finances through increased business revenue, employment income, and community-led initiatives. As the Project is Indigenous-led, the WPT considers it a key opportunity to provide local jobs and business contracts to Webequie and other LSA communities, which may have otherwise be filled by external contractors. The Draft EA/IS notes that

> *Details on Webequie First Nation's role in the construction and operation of the WSR are not available… In terms of community readiness planning, Webequie First Nation has identified community services and infrastructure needs in its Comprehensive Community Plan and other planning documents. In order for the community to meaningfully participate in the Project and experiences benefits, (AtkinsRéalis, 2025, pp. 15-135).*

The same has not been identified for other Nations within the LSA. Currently Webequie estimates that an investment of $60 million is required to improve the conditions within Webequie that will enable the community to capture the most benefit from the Project.

While the province of Ontario has committed to cover the cost of construction and operation, the Draft EA/IS points out that overall revenue generated through direct, indirect, and induced taxes is estimated to generate a profit over a 15-year return period. At the same time, the federal government will benefit from tax revenue generated by the WSR. No plan has been outlined to share those profits within the LSA or reinvest these benefits.

Project enhancements (not mitigations) are proposed to improve the positive effects of the Project and maximize economic benefits and long-term financial stability. This includes investment in Webequie for building skills, economic diversification, and new or upgraded infrastructure.

2.10.2 EVALUATION

Economic and Financial Impacts

This Project is intended to be an economic driver, both for the regional mineral development and for the community of Webequie. As an economic engine within Treaty 9 Territory, and with Nibinamik as

a Treaty signatory, it is imperative that the economic benefits extend to Nibinamik in recognition of Treaty Rights – which include sharing in the economic benefit from development of Treaty lands. However, the Draft EA/IS does not include mitigation or accommodation measures specific to economic rights, gaps which are also reflected in the Aboriginal and Treaty Rights section (see Section 2.14.2).

The Draft EA/IS emphasizes the substantial economic contributions of forestry and mining—estimated at $6.9 billion and $18 billion to GDP, respectively, alongside the recognition that the WSR itself is anticipated to generate revenue for government. At the same time, the Draft EA/IS acknowledges that Webequie First Nation would require an investment of approximately $60 million to meaningfully participate in the Project's economic opportunities. Proceeding with the WSR as a profit-generating venture that contributes to industries with a combined value of nearly $25 billion, without firm commitments to equitable benefit-sharing with directly impacted Nations, including Nibinamik, is inconsistent with the honour of the Crown and Treaty obligations. This approach further contravenes Canada's commitments under UNDRIP, which affirms the right of Nibinamik to:

- determine their own economic priorities, which when deprived entitles them to just and fair redress (Article 20);
- use develop and control the resources within the Homelands (Article 26);
- redress, restitution and equitable compensation for the use of lands without free, prior, and informed consent (Article 28); and
- participate in decision-making regarding projects affecting the Homelands which includes state-provided mechanisms for adverse impacts (Articles 18 and 32).

Failing to align the Project with these principles externalizes the cultural and ecological costs onto Indigenous communities like Nibinamik whose Homelands will bear the direct and lasting impacts of development, while denying them a fair share of the benefits.

This Project is designed to align with Webequie self-determination goals and community priorities, and there is no evidence that the same consideration has been given to Nibinamik. As noted above, there is a $60-million investment requirement, enabling Webequie's ability to fully capture Project-related benefits. However, no comparable work has been undertaken to identify investment needs to support capturing Project benefits in Nibinamik or other LSA communities. This disparity in understanding readiness, in combination with lack of commitment to affirm Treaty Rights, breeds potential for inequitable distribution of benefits and ignores the broader economic challenges across the LSA.

The assessment fails to propose measures for ensuring that provincial and federal revenues generated by the Project remain within the LSA to support local economic development and benefits. This omission overlooks the opportunity to reinvest government profits from Treaty land use in directly impacted First Nations, such as Nibinamik.

Finally, the Draft EA/IS predicted changes and evaluated the Project's direct influence on mining and forestry. However, there is no consideration of cumulative effects from the longer-term changes to

the forestry and mining industries as a result of the road connecting to the Ring of Fire, and the effects on local economies.

Limited Baseline and Lack of Binding Commitments

The Draft EA/IS acknowledges that reliance on census data, as the primary input, does not adequately capture the traditional economy and may either under- or over-represent existing conditions, thereby limiting the accuracy of projected economic impacts. Socio-economic conditions within the LSA are identified as key factors influencing employment barriers and labour force participation, with a significant disparity in income and employment already present across communities.

The Draft EA/IS forecasts that the majority of employment opportunities will be directed to members of Webequie, with a smaller proportion available to other LSA communities, including Nibinamik. As noted, “due to the limited presence of supply chain industries in the LSA, relatively few indirect effects will be captured by the other LSA communities” (AtkinsRéalis, 2025, pp. 15-114).

Importantly, the assessment does not propose mitigation measures to address existing challenges in local employment and income conditions but instead frames these comments as “Project enhancements.” Without binding commitments, the socio-economic issues and inequities documented (in the existing conditions baseline) can reasonably be expected to persist or worsen as a result of the Project. Nibinamik is concerned that the characterization of these measures as “enhancements” does not provide the level of certainty : they must be framed and implemented as formal mitigations to ensure adverse impacts are addressed. Webequie as the proponent, is expected to hold a direct role and accountability in achieving Project outcomes. Nibinamik expects this to include ensuring benefits for Webequie and Nibinamik (as a Nation within the LSA). Lack of enforceable commitments to mitigate employment, income, and business environment effects means there is no certainty that conditions in the LSA will improve as a result of the WSR.

Traditional Economies and Rights

The Draft EA/IS considered traditional economies, but limited data were available or provided. The Draft EA/IS recognized that the traditional Indigenous economy is a component of Aboriginal and Treaty Rights and considered to be directly related to other disciplines of assessment (fish, wildlife, vegetation) all of which are included herein and highlight potential long-term impacts affecting Nibinamik rights and traditional economies.

The majority of the assessments are based on census data, which the Draft EA/IS acknowledges excludes traditional economies. Employment rates are notably lower in the LSA than the rest of Ontario. The lack of data on traditional economies in combination with concerns related to other environmental disciplines reduce the certainty with which the Project can claim traditional economies and rights will not be adversity impacted. Nibinamik is concerned that the importance of traditional economies may be substantively underrepresented, and in the absence of a cumulative effects assessment, the impacts (short- and long-term) overlooked. Nibinamik asserts that consideration of the cumulative effects on rights and traditional economies is warranted.

2.10.3 RECOMMENDATIONS AND REQUESTS

Economic and Financial Impacts

Nibinamik recommends that the economic environment assessment better encompass rights consideration in addition to generic benefits and impacts, as this forms part of the legal and constitutional context. Beyond a separate Aboriginal and Treaty Right Impact Section, a discussion of how the Project will fulfill constitutional and Treaty obligations is warranted as part of the economic environment assessment. This should include revenue sharing commitments to ensure that Nations benefit economically and can better enable their ability to capture the positive effects of development (WSR and regional).

An improved engagement process is required to understand how this Project, and its objective for Ring of Fire development, relate to Nibinamik's self-determination goals, traditional economies, and community priorities. Additional community plans and inputs are necessary for Nibinamik rights to be considered, and this may include an assessment of the Nations' readiness to participate in the WSR and other regional development.

Limited Baseline and Lack of Binding Commitments

Economic knowledge gaps from the use of census data, and on wage and employment disparities, can be addressed by community-specific studies and planning. These would ensure Nibinamik and other LSA communities are prepared to participate in the Project as well as any regional development to come in the Ring of Fire. To this end, Nibinamik requests capacity to undertake economic development planning for the community. Project planning must also, in turn, consider Nibinamik-specific outcomes in Project planning to meaningfully address the socio-economic challenges and traditional economy impacts. This must be paired with direct, collaborative engagement:

- Between Nibinamik leadership and Webequie leadership to address employment and labour force participation as part of this Project as well as adaptive management for follow-up accountability.
- Between Nibinamik and the WPT along with commitments for future relationship building with the construction and operations contractor(s) and adaptive management for follow-up accountability.
- Between Nibinamik and Ontario and Canada to ensure the appropriate support systems are in place to improve Nibinamik members' capacity to capture future employment opportunities. Training and career development must be beyond Project-specific opportunities to prepare for long-term regional development.

Nibinamik also requests that Project-specific enhancement be converted to mitigations, to improve employment and income outcomes. These mitigations should include:

- Seasonal and flexible work opportunities to accommodate cultural practices (traditional land use and ceremony);

- Wage equity between employees from the LSA, RSA, and beyond;
- Mitigative training and strict workplace policies against discrimination and harassment;
- Zero tolerance policy for drugs and alcohol at all work and camp sites;
- Inclusion of ceremonial or cultural practices in construction plans;
- Monitoring programs with specific targets and metrics on employment and income within the LSA;
- Commitments to adaptive management and contingency measures if employment objectives are not met;
- Robust and transparent procurement policies and target to involve Indigenous-owned businesses and Indigenous hiring strategies;
- Set-asides for Indigenous businesses, and Indigenous-prioritized bidding processes;
- Scalable contracts and training to promotes skill development and sustainable Indigenous-owned business growth;
- Simplified and streamlined procurement processes for Indigenous businesses, with procurement support processes (such as guidance to navigate the procurement process);
- Nation-direct engagement with Nibinamik to discuss opportunities and maintenance of the business relationship; and
- Track, measure, and report economic outcomes; require institutional commitment from senior Project leadership to ensure economic goals are prioritized and achieved in collaboration with Webequie First Nation.

Traditional Economies and Rights

Nibinamik understands that short-term impacts may be centred around the lack of individual opportunities to participate in traditional economies (as a result of employment), and therein cultural preservation. However, long-term potential for degradation of the environmental conditions necessary for traditional economies exists– and in combination with any changing employment conditions–the impacts become cumulative. Nibinamik emphasizes that mining and resource extraction have the tendency to operate on a boom-and-bust cycle.

Further data on participation in traditional economies and the conditions to sustain Aboriginal Rights are required to develop effective and locally relevant mitigations. In the future cumulative effects assessment on the Rights of Indigenous Peoples economic participation must be meaningfully assessed with fulsome mitigation commitments included.

2.11 NON-TRADITIONAL LAND AND RESOURCE USE

2.11.1 SUMMARY OF DRAFT EA/IS CONTENT

Non-traditional land and resource use is defined in Section 16 of the Draft EA/IS as "the use of the land and their resources for commercial and industrial purposes such as mining and aggregates, recreation and tourism activities. Non-Traditional land and resource also refer to designation of lands, through federal, provincial or local policy instruments" (AtkinsRéalis, 2025, pp. 16-11). Though the impacts to traditional land and resource use are assessed in other sections of the Draft EA/IS (namely Section 19 on ATRI), some impacts on non-traditional land and resource use may also affect Nibinamik's rights and interests.

The Draft EA/IS identified the following VCs for non-traditional land and resource use:

- Land Use Compatibility and Stewardship;
- Commercial and Industrial;
- Recreation and Tourism (i.e., camps, trails, waterways, etc.);
- Provincial and Federal Parks, Ontario ANSI (Areas of Natural and Scientific Interest) and Other Protected Areas; and
- Transportation.

The study areas for this component are: the Project Footprint, the LSA (1 km from the preferred route and 500 m from supportive infrastructure, as well as Webequie First Nation) and the RSA (nine surrounding first Nations, including Nibinamik).

Many Project activities during both the construction and operation phases were identified as interacting with the Social Environment VCs, including: vegetation clearing, construction of the road and waterbody crossings, aggregate extraction, operation, maintenance and repair of the road and pits and quarries and emissions and discharges.

The potential effects identified in this section include:

- Changes to how people use the land and water to access fishing, hunting and trapping areas. On the one hand, it could make it more difficult to access these areas, but on the other, it may increase access for non-local people;
- Increase of tourism and outfitting activities caused by increased access;
- Increase in mining, forestry, hydro and other development in the area;
- Increased traffic.

The Draft EA/IS proposes measures to mitigate effects to non-traditional land and resource use. These focus mainly on minimizing effects on the Project Footprint and LSA. These include, but are not limited to:

- Use provincial and federal policy instruments to restrict access;
- Complete Community-Based Land Use Plans (CBLUPs) to support Indigenous stewardship of lands and water;
- Develop a tourism plan;
- Indigenous monitoring of waterbody crossings to minimize impacts on fish and fish habitat; and
- Establish a technical working group to coordinate transport.

Only the Change in Transportation (increased traffic volumes on existing roads) effect was carried forward for inclusion in the cumulative effects assessment.

2.11.2 EVALUATION

Incomplete Land Use and Stewardship Information

The land use information used to describe Nibinamik baseline/existing conditions is outdated and incomplete. The section cites land use planning data from a 2014 study, which is over 10 years old and likely outdated. Further, the trapping evaluation relies on Statistics Canada census data, which are recognized as underreported and underrepresented (Leach, 2025). The Draft EA/IS claims there are 0 members from Nibinamik whose occupation is trapping or hunting, which given Nibinamik's relationship to the land and to traditional activities, as well as its remote location, is unlikely.

Underestimated Impacts

As stated in Section 2.1.1, above, the Draft EA/IS's methodology and rationale for the determination of significance leads to the underestimating of certain impacts. The Draft EA/IS considers the impacts of tourism on land and resource use as negligible, but Nibinamik community members have expressed significant concerns regarding increased access for outfitters, hunters, and gatherers. Similarly, road use is likely to decrease availability of wildlife and fish resources as it will increase pressure from hunting and other harvesting activities in the area. Though WSR use may not provide a direct transportation connection to hunting or fishing sites (as stated in the Draft EA/IS), it will provide easier access to these areas that are currently difficult to access (AtkinsRéalis, 2025, pp. 16-150). This is especially true during the winter months when a winter road is otherwise the primary connection from Webequie to Nibinamik. The effect of increased road access in the area is therefore not negligible and must not be assessed as such. Nibinamik requests that these effects not be minimized.

Legislative Gaps

The Draft EA/IS proposes Mining Act provisions to prevent a rise in mining claims. However, this mitigation does not fully address the broader legislative context and only provides limited mitigation to the impacts on land and resource use from increased mining claims in the region. Other provincial and federal laws, namely Bill C5 (federal) and Bill 5 (provincial) may significantly influence and accelerate mining activity in the Ring of Fire, and must be factored into this impact assessment (see also Section 1.1).

Quarry Reclamation

Nibinamik community members have raised concerns about the reclamation or ongoing operation of aggregate pits and quarries once the road construction is done, and how these might affect their use of the land in the region. Despite soft commitments in the Draft EA/IS to reclaim aggregate infrastructure, changes in the ownership of quarries are likely to occur over the life of the Project and would affect the reclamation process. The Draft EA/IS did not provide clarity regarding a reclamation approach for pits and quarries that is resilient to changes in ownership, nor did it provide specific plans for reclamation.

2.11.3 RECOMMENDATIONS AND REQUESTS

Nibinamik provides the following recommendations and requests to ensure that the Project effects on non-traditional land and resource use are adequately assessed and that appropriate mitigation measures are implemented to minimize these effects. Additional details are provided in Appendix A.

- **Tourism Impacts From Project Operations**
  - The potential for increased tourism activity, including outfitters, due to road use should be assessed as having a moderate to high effect. This impact must also be included in the cumulative effects assessment, with appropriate mitigation measures identified and implemented.
- **Wildlife and Fish Availability**
  - The potential for decreased availability of wildlife and fish resources due to road use should be assessed as having a moderate to high effect. This issue should also be included in the cumulative effects assessment, with mitigation measures applied.
- **Consideration of New Legislation (Bill 5 and Bill C-5)**
  - Although Bill 5 and Bill C-5 were not in effect at the time of the Draft EA/IS release, the revised final EA/IS report must incorporate and reflect the new legislative environment.
  - The Proponent must evaluate how these laws will affect development, especially mining, and land and resource use in the region.
- **Development of a comprehensive closure and reclamation plan for aggregate pits and quarries**

- Nibinamik requests meaningful participation in the development of a comprehensive closure and reclamation plan for all aggregate pits and quarries associated with the Project. As noted above, this plan should remain enforceable regardless of any future change in ownership or responsibility. A framework of this plan should be developed and shared with Nibinamik prior to any decision made on the WSR Project.
- Pit and quarry sites will have direct impacts on fish and wildlife habitat during construction, which in turn affects Nibinamik's rights and land and resource use, including hunting, trapping, and fishing. Failure to implement thorough and culturally informed reclamation measures risks causing long-term, avoidable harm to the land and undermines Nibinamik's rights and responsibilities as stewards of their Homelands.

2.12 HUMAN HEALTH

2.12.1 SUMMARY OF DRAFT EA/IS CONTENT

Webequie community members define health as both mental and physical, having a relationship with the land and to live *Mino Bimaadiziwin*, which translates as "the good life" and "is an understanding that all beings are related and is the idea of the unity and dignity of all beings" (AtkinsRéalis, 2025, pp. 17-14).

The Determinants of Health (VCs) identified in the Draft EA/IS for the Human Health assessment are categorized into three (3) levels:

- Level 3 – Structural or systemic factors: This includes colonialism and related trauma, racism and social inclusion, self-determination and governance;
- Level 2 – Environmental and community factors: This includes air quality, water quality, noise and light pollution, food security, housing, education, access to healthcare, safety; and
- Level 1 – Individual, behavioural and biological factors: This includes mental health, substance use, and diet.

The spatial boundaries for the assessment of the effects on human health are identified as the LSA (eight First Nation communities surrounding the Project, including Webequie and Nibinamik), and the RSA (municipalities and First Nation communities in the districts of Kenora, Thunder Bay, and Cochrane).

The baseline conditions were gathered using existing publicly available information. Only Webequie, Marten Falls, and Weenusk First Nations provided IKLRU information and data to be integrated into the Draft EA/IS. The baseline community health profile was focused on Webequie, and therefore the focus of the assessment was on the potential effects of the Project on Webequie.

The methodology used in the Draft EA/IS for the determination of significance identified that the Project would have significant effects on the following human health VCs. The determination considered the proposed mitigation and enhancement measures and other criteria such as the frequency, duration, timing and likelihood of occurrence:

- Racism and social exclusion (adverse);
- Local economic growth (positive);
- Air quality (adverse);
- Employment and income (positive);
- Education/access to education (positive);
- Food security (neutral to positive);
- Safety and security of women and girls (adverse); and
- Substance use (adverse).

The Draft EA/IS proposed a cumulative effects assessment and follow-up monitoring for the above pathways that are expected to have net adverse effects. The Draft EA/IS proposed a general approach and recommendations for follow-up and monitoring, but no specific methodology or framework is detailed.

2.12.2 EVALUATION

In addition to the gaps identified above in Section 2.1 which also apply for the assessment of the WSR on human health (namely the lack of baseline data and the determination of significance), Nibinamik provides the following concerns specific to the assessment of human health.

Food Security and Traditional Land Use

The health and overall well-being of Nibinamik community members are intrinsically linked to food security and food sovereignty—access to traditional and cultural foods such as beaver, moose, caribou, grouse, fish, and other country foods. The WSR and increased development in and around Nibinamik Homelands will have both positive and negative effects on food security and food sovereignty. Development will increase and facilitate access for Nibinamik community members to the land for harvesting activities, but it will also facilitate access for non-community members, increasing the pressure and competition on food sources and habitats that support them.

Mitigations proposed for the impacts of the WSR include ensuring Webequie First Nation is involved in land use planning activities. However, having only Webequie involved is not representative of all First Nations in the LSA and does not allow other impacted First Nations, including Nibinamik, to be meaningfully involved in the Project. The Draft EA/IS also proposed to identify traditional harvesting areas to minimize disturbance as a mitigation measure. However, this mitigation measure is only effective if, as already stated in this document, the Proponent commits to supporting Nibinamik in data collection and studies to identify culturally sensitive areas.

Cumulative Effects

Air quality, groundwater quality, and surface water quality have all been assessed to have impacts on health. However, the assessment was not carried forward for these indicators in the cumulative effects assessment. No rationale is provided for this decision in the Draft EA/IS.

Monitoring

The Draft EA/IS states that First Nations are invited to lead monitoring programs, which could help mitigate impacts of the Project on human health. However, the Proponent must recognize that many communities lack the capacity and budget to develop and implement monitoring programs. The Proponent makes no commitment in the Draft EA/IS to ensure adequate support for community-led monitoring and follow-up programs. Further, all proposed follow-up and monitoring efforts focus on Webequie, and do not address impacts on surrounding First Nations, including Nibinamik.

2.12.3 RECOMMENDATIONS AND REQUESTS

Based on the above concerns, Nibinamik makes the following requests to ensure a more meaningful assessment of WSR impacts on the health of Nibinamik members:

- To ensure impacts on Nibinamik community members' ability to harvest and consume culturally important foods, Nibinamik must be included in land use planning activities. Nibinamik must also be included in, and provided capacity support to participate in, all other relevant monitoring, follow-up, or planning activities, including the Community Readiness Plan, the Community Liaison Committee, cultural sensitivity training, Community Health and Well-Being survey, etc.
- The adverse effects on food security (impacts on wildlife populations and health caused by increase in noise, dust, etc., increased access for people external to communities, etc.) during the construction phase must be assessed and mitigated and carried forward to the cumulative effects assessment.
- To mitigate impacts on Indigenous food sovereignty, Nibinamik recommends that the Draft EA/IS develops and implements a program that ensures contracts for beaver trapping go to trappers in the LSA communities. Rather than simply removing beaver dams that may obstruct road crossings, trapping could create a long-term solution that also provides opportunities for community members to practice traditional activities and have access to culturally important food sources.
- Air quality, groundwater quality and surface water quality, which are considered to have significant impacts on human health, must be included in the cumulative effects assessment.

2.13 EXERCISE OF ABORIGINAL AND TREATY RIGHTS

2.13.1 SUMMARY OF DRAFT EA/IS CONTENT

The assessment of effects on Indigenous Peoples and Aboriginal and Treaty Rights was informed by the WPT, which is comprised of Webequie community members and elected councillors, and guided by Elders. Available IKLRU was also incorporated from Webequie, Marten Falls, and Weenusk First Nations, including information on traditional practices and areas, historical uses of land and resources, social and cultural traditions, and social trauma.

The study areas for this component were the Project Footprint, the LSA (eight First Nations including Nibinamik), and the RSA (14 First Nations where the quaternary watersheds will be crossed by the preferred route).

The Draft EA/IS's assessment of effects on ATR was organized into four (4) categories: Rights related to traditional land use, rights related to cultural continuity, rights related to socio-economic, health and well-being, and rights related to self-determination and governance.

Much of the assessment of effects on Aboriginal and Treaty Rights is incomplete, with data missing regarding many First Nations in the LSA, and information pertaining to Webequie, Marten Falls, and Weenusk First Nations blacked out in the Draft EA/IS. Based on the information used the Draft EA/IS predicts there will be a net effect of the WSR on the following VCs related to Aboriginal and Treaty Rights:

- Current and historic Traditional Land and Resource Use (change in access to land and resources, changes to distance for harvesting, changes in availability of resources, changes of the experience of being on the land, etc.); and
- Cultural Continuity (loss or change of culturally important and sacred sites, changes to cultural traditions, etc.).

Potential impacts to Rights identified by the WPT include impacts on caribou, erosion of spiritual practices, impacts on land stewardship and self-determination and governance, impacts on community well-being, impacts on language, and risk of cultural dilution.

Mitigation measures proposed for these impacts include the implementation of a CEMP and OEMP, establishing buffer zones around key harvesting areas, and a Stewardship and Environmental Management Strategy.

No cumulative effects assessment has been conducted yet for this component of the impact assessment.

2.13.2 EVALUATION

Nibinamik Aboriginal and Treaty Rights

As Anishinabek people, Nibinamik holds rights and responsibilities for the ongoing stewardship and sustainable development of the lands, waters, and resources of their Homelands. Nibinamik also has the fundamental right to protect their Homelands to ensure they can sustain their people today, and into the future, as they have done since time immemorial. These rights and responsibilities are the guiding principles that inform Nibinamik's decision making as a community, and their relationship with Ontario, Canada, and others who seek access to their lands.

Some of Nibinamik's rights have been outlined in UNDRIP, which includes, among other rights, the rights to self-determination and self-government (Articles 3 and 4); the right to maintain and strengthen Nibinamik's distinctive relationship with their territories (Article 25); the right to own, use, develop, and control Nibinamik's lands and territories (Article 26); the right to conservation and protection of the environment (Article 29); the right to determine and develop priorities and strategies for the development or use of Nibinamik's lands, territories and other resources (Article 32(1)); and the right to be consulted in order to obtain Nibinamik's free and informed consent prior to the approval of a project affecting their lands, territories, or resources (Article 32(2)). The Supreme Court of Canada has recently confirmed that UNDRIP "is incorporated into the country's domestic positive law" (An Act respecting First Nations, Inuit and Métis children, youth and families,, 2024, p. 15; Dickson v Vuntut Gwitchin First Nation , 2024, pp. 47, 117). While framed as rights, these also fundamentally represent Nibinamik's responsibilities to the lands, waters, and resources of their Homelands and their obligation to manage, protect, and sustain them for future generations.

As a signatory to Treaty 9, Nibinamik also holds Aboriginal and treaty rights throughout their Homelands in Treaty 9 territory. Since 1982, Nibinamik's Aboriginal and treaty rights have been recognized and affirmed by section 35 of the *Constitution Act, 1982*. Nibinamik's treaty promised that they would be able to continue to sustain their community into the future by relying on their Homelands as they had always done. This requires that Nibinamik be involved in decision-making and careful environmental stewardship and consideration of how development and other activities will affect the lands, waters, and exercise of Nibinamik's rights for future generations.

Nibinamik's rights—and responsibilities—as Anishinabek people, and their constitutionally protected Aboriginal and treaty rights, guide their work as a First Nation in planning for the future. These rights and responsibilities are also intrinsically linked to Nibinamik's well-being and cultural continuity, and must be respected and understood in the context of the WSR. As stewards of their Homelands, Nibinamik must be meaningfully engaged and involved in all decision making related to development on their Homelands, including the WSR.

Lack of Meaningful Engagement and Opportunities

Nibinamik received communications from the WPT that included the opportunity to participate in many facets of the Project. Nibinamik acknowledges the considerable outreach regarding

participation in the Project, through a community meeting in Nibinamik, attendance at forums or reviewing Project information and providing feedback to the WPT.

Despite these communication efforts from the WPT, Nibinamik does not consider consultation to have been effective, in part due to the lack of leadership-to-leadership engagement and the lack of time and support to conduct IKLRU and baseline studies. The only IK mentioned throughout the Draft EA/IS was provided by Webequie, Weenusk, and Marten Falls First Nations. Based on the Draft EA/IS, only 12% of First Nations consulted were able to provide IK, and the IK incorporated was limited in scope and volume.

Further, the Proponent has not made any commitments to support First Nations in the region in shared economic development throughout WSR operations. Treaty 9 signatories have a right to benefit meaningfully from development on their Traditional Territory. This is especially important when development will impact constitutionally protected rights. As currently drafted, the EA/IS fails to address the full scope of potential impacts that the Project may have on Aboriginal and Treaty Rights and interests. The Proponent and WPT must continue to consult with Nibinamik and provide opportunities for meaningful engagement and participation throughout the lifecycle of the Project and ensure they equitably benefit from the Project.

Additionally, Nibinamik understands that a purpose of the Draft EA/IS review is to evaluate how IK has been integrated into the Project assessment. In absence of this information being available in the Draft document, it does not accurately represent or encompass Nibinamik rights, values, and interests. Referenced documents on Nibinamik in the Draft EA/IS are from 2014 and outdated (see Section 2.1.1.2 Incomplete Land Use and Stewardship Information).

Potential Impacts on Nibinamik Rights and Land and Resource Use

Nibinamik community members have expressed a range of concerns about the proposed road and related development, highlighting significant direct impacts on their own land and resource use, as well as indirect impacts through changes to wildlife patterns and habitat. The impacts that colonization has had on Nibinamik's way of life – such as forced settlement, intergenerational trauma, the loss of language, culture, and traditional knowledge, and a weakened connection to the land – are still deeply felt today. Although Nibinamik is not wholly against development, Nibinamik is concerned that opening the region will only exacerbate these impacts. In the words of Ogamakan (Chief) Michael Sugarhead;

> *The community must first heal [from the cumulative impacts and trauma of colonization] before it can open the Homelands to development. Because healing must happen on the land, protecting it is not just important, but necessary to preserving Nibinamik's way of life.*

Community members recognize that improved access to their Homelands through all-season roads could offer benefits—such as enhanced opportunities for hunting, trapping, fishing, and other traditional activities, as well as bringing youth onto the land for learning and healing. However, these potential advantages were weighed against serious concerns. Specifically, community members emphasized the potential disruption to wildlife habitat, changes to harvesting practices, and broader implications for their governance systems and responsibilities to care for the land.

Impacts to Land and Resource Use and Governance

As mentioned in section 2.10.2 above, existing Nibinamik IKLRU, though limited, demonstrates that some Nibinamik community members live in Webequie First Nation, or travel there frequently to visit family and friends. They also travel to Webequie to practice traditional activities such as hunting, fishing, trapping and gathering of plants, fruits, and medicine. Nibinamik members use the winter road in the winter months, and the waterways that connect both communities in the warmer months.

Nibinamik members provided the following concerns related to land and resource use and governance while providing WSR feedback:

- Outsiders gaining access to Nibinamik's Homelands for hunting, fishing, and resource extraction (e.g., through Ministry of Natural Resources [MNR] permits). Community members have already noticed a rise in outsiders coming to hunt and fish on their land without their permission, arriving by float planes.
- Road access may change how people use and relate to the land; many Nibinamik land users say it "doesn't feel right."
- Nibinamik land users expressed fears of the area becoming more overdeveloped and disconnected from traditional way of life.
- Nibinamik community members expressed that they should be informed and involved in decision making around development in their Homelands.

Impacts to Wildlife Habitat and Harvesting Practices

Additionally, Nibinamik community members mentioned the following concerns related specifically to harvesting practices:

- Impacts of increased hunting and fishing pressure on local wildlife (e.g., moose, caribou, beaver, grouse, lynx, marten, muskrat, migratory birds).
- Wildlife displacement due to noise (e.g., helicopters from mining exploration scaring off moose).
- Reduced hunting opportunities due to moose and caribou displacement and mortality from clear-cutting and road creation, including increased vulnerability to predators like wolves.
- Reduced access to and/or availability of medicinal plants and other culturally important vegetation (e.g., cedar bark, sap, birch bark, chaga).
- Concerns regarding the spread of invasive species (plants, insects) from vehicle traffic such as transport trucks and the resulting impact on culturally valued species.
- Concern about potential accidents and spills on the road during construction and operation, which could impact water quality, fish and fish habitat, and other wildlife species that are important sources of traditional food and medicine. These environmental impacts would

affect the ability of community members to harvest and consume traditional foods from the land.

A targeted IKLRU study is needed to determine the exact impacts of this Project on Nibinamik's land and resource use and the exercise of their Aboriginal and Treaty Rights, as well as implement appropriate mitigation, follow-up, and monitoring measures.

2.13.3 RECOMMENDATIONS AND REQUESTS

Nibinamik asserts that all development, and especially the WSR as a recognized precursor to further development, must be governed by a process grounded in Aboriginal and Treaty Rights, full transparency, and environmental stewardship. This relates not only to Nibinamik's participation (on their own terms, with the ability to shape how, whether, and under what conditions development proceeds across their Homelands) but also the order of assessment completion.

The risks of committing to a development path for WSR without fully understanding long-term, synergistic consequences to Aboriginal and Treaty Rights and interests limits the ability to truly mitigate impacts effectively (Nibinamik First Nation, November 2021). This becomes increasingly important given that the Draft EA/IS indicates there was limited IK provided by other rights holders and no commitment to future meaningful opportunity for the WPT to address Nibinamik Aboriginal and Treaty Rights and interests. Nibinamik requests the RA process be completed, and its findings and recommendations be incorporated into the assessment of the WSR, in advance of any WSR regulatory decisions. By having the regional picture, decision-makers are less likely to approve individual projects that, when combined, lead to unforeseen or unmanageable rights impacts.

In addition to the general requests in section 2.1.2, above, Nibinamik makes the following recommendations and requests to ensure adequate assessment of the effects of the WSR on Nibinamik Aboriginal and Treaty Rights and interests, as well as effective mitigation and enhancement measures:

Ongoing Meaningful Engagement and Indigenous Knowledge Contributions

- Based on what appears to be limited IK inclusion in the Draft EA/IS, Nibinamik reiterates the need for equitable and meaningful inclusion of Nibinamik in IK contributions and decision making. Nibinamik has communicated their right to be actively involved in early decision making, environmental assessment, monitoring, and long-term stewardship across the Nibinamik Homelands since 2019 (Winterburn, Nibinamik First Nation's Comments on Marten Falls First Nation's Proposed Community Access Road Project, 2019).
- Nibinamik notes that the deficit in achieving equitable and meaningful participation for all rights holders can be counterbalanced by withholding all Project decisions, including application approval, until after the RA has taken place and after Nibinamik has completed IKLRU and existing baseline studies, which must be funded by the Proponent, and/or the provincial and federal governments.
- Ongoing engagement and consultation throughout the Project lifecycle are critical. Consultation must not end with the completion of the EA/IS but continue throughout

construction and operation. This process allows for ongoing verification of mitigation measures and adaptive responses where necessary as well as mutual benefit from development.

- Ensure Nibinamik representatives participate in all relevant monitoring, follow-up, and development plans, including development and implementation of the Stewardship and Environmental Management Strategy.

Ensure Equitable Access to Economic Opportunities for Nibinamik

- Equitable sharing of benefits—such as employment, training, and contracting opportunities—among all affected First Nations communities. These opportunities must be identified for Nibinamik early in the planning procedures to ensure that Nibinamik is prepared to participate in procurement and contracting.
- Alternative funding and support mechanisms must be provided to address community-specific needs and uphold Aboriginal and Treaty Rights to mutual benefit where the Project does not provide equitable economic opportunity.

Complete a Rights Assessment

- To ensure that the WSR Project is developed in a manner that respects rights, values, and interests, Nibinamik requests that a rights assessment be made available for review and input prior to the finalization of the EA/IS. Nibinamik also requests a copy of the study referenced throughout section 19.2.2.2.6 as "(Nibinamik First Nation, 2014)."
- In absence of the rights assessment being made available for review, Nibinamik offers additional comments for incorporation into the Final EA/IS that highlight:
  - Protecting traditional lifestyles and community safety with road security measures.
  - Preservation of First Nations language and place names on signage.
  - Distributing the benefits of development equitably.
  - Community-Specific Aboriginal and Treaty Rights Assessment is provided by Nibinamik (and funded by the Proponent) to input into the Final EA/IS.

These measures, along with those in Section 2.1.2, above, will allow Nibinamik to meaningfully participate in decision making and development of the WSR. They will also allow Nibinamik to make informed decisions on the Project, and ensure impacts to Nibinamik community members are minimized and benefits are maximized. It is important that the Proponent commit to implementing these measures, and meet with Nibinamik leadership to develop frameworks for the above requests, prior to any decision or approval on the Project.

2.14 CULTURAL HERITAGE AND ARCHAEOLOGICAL RESOURCES

2.14.1 SUMMARY OF DRAFT EA/IS CONTENT

The WPT retained Archaeological Services Inc to complete a Cultural Heritage Report (CHR) and a Desktop Stage 1 Archaeological Assessment (AA) in support of the Project.

The AA was completed in January 2025 with the intent of carrying out background research to understand historical land use and determine the archaeological potential model for the study area. The LSA for this component is defined as a 1-km buffer from the centreline of the Recommended Preferred Route and a 500-m buffer from temporary and permanent supportive infrastructure. Within the LSA, background information and historical land use was researched to determine the archaeological potential of this study area.

The RSA consists of a 5-km buffer beyond the LSA that was subject to similar background information and historical land use research to support and better understand the LSA. No archaeological potential model was developed for the RSA.

A site visit was not completed as part of the AA, and the Draft EA/IS acknowledged that it cannot recommend the removal of archaeological potential from any area within the LSA. The Draft EA/IS does note high potential areas where they would anticipate archaeological potential to be removed following a site visit. These areas include:

- Existing winter roads,
- The airport, and
- The Eagle's Nest Mine area.

This model was ultimately used to determine the areas recommended for Stage 2 archaeological assessment, including:

- Within 50 m of modern water sources;
- Within 150 m of 39 features of cultural significance identified through IK; and
- Within pockets of well-drained soil surrounded by rockland.

According to the Draft EA/IS, a targeted Stage 2 archaeological assessment was initiated in 2024 to support the geotechnical investigation. Additional Stage 2 was expected to have been completed in late spring 2025 and beyond, in support of the future development phases of this Project.

The CHR was completed in March 2022 with revisions in March, July, and October 2024. It presents an inventory of known and potential Built Heritage Resources (BHRs) and Cultural Heritage Landscapes (CHLs), including culturally important Indigenous sites and areas. The report consists of: Existing Conditions and Preliminary Impact Assessment, which includes an inventory of known and

potential BHRs and CHLs, based on a review of existing heritage inventories, background research, and review of available IK studies. During the Webequie IK Study, Webequie members noted that the entire landscape setting within which the proposed WSR is located is of significance: "Study participants stated that 'everywhere' surrounding the Webequie reserve and the proposed route for the Webequie Supply Road was important to them and their families for Traditional Land and Resource Use" (AtkinsRéalis, 2025). Based on the report, three (3) CHLs were identified:

- CHL 1 - Travel routes,
- CHL 2 - Harvesting Areas and Sites–Hunting and Trapping, Fishing, Plant Gathering and Spring Water, and Habitation Sites, and
- CHL 3 - Cultural, Spiritual and Ceremonial Areas and Sites.

The Draft EA/IS directly integrated IK to develop CHLs and features of archaeological potential that ultimately influenced the recommendations of the CHR and AA for next steps. The CHR includes this knowledge to better understand the implications and results of the IK study, but the AA has redacted the information, making it impossible to evaluate the final impacts on the results and recommendations.

Potential Effects and Mitigations

This Project is expected to establish a new 35-m wide ROW along the 107 km Recommended Preferred Route corridor with the potential for an additional 25 m buffer extending from the edge of the ROW where temporary use and additional land clearance may be required (AktinsRéalis, 2024h, pp. 70, 94-95).

The remainder of the LSA outside of the areas of high potential identified above were presumed to be permanently saturated and exhibit low archaeological potential. Some of these areas, due to their presumed low potential and remote and inaccessible locations, may not be subject to any visual survey following the exemption provided for remote locations in the Ontario Standards and Guidelines for Consultant Archaeologists (S&Gs).

For areas of impact within the study area, namely the ROW and additional land clearance, it is expected that these areas will experience deep and extensive soil disturbance during road construction, which would remove archaeological potential if the areas are not first subjected to archaeological survey.

The CHR indicates that several CHLs identified in the available IK studies intersect with the preferred route, risking impacts to areas of significance. The CHR recommends that mitigation measures could consist of:

- Avoidance;
- Alternative design or construction approaches;
- Monitoring;

- Protection;
- Relocation;
- Remedial landscaping; and
- Documentations.

Additionally, the IK study identified mitigation suggestions from the community that included:

- Conducting a medicine survey prior to construction along the proposed route;
- Using checkpoints along the route to clean equipment and monitor for invasive species and plants; and
- Avoiding sacred areas along the route and have spiritual monitors who are trained by Elders to participate during the construction.

The final recommendations of the CHR indicate that further research and engagement with Webequie and other First Nations should be completed in order to gather additional information to determine their cultural heritage value. Subsequent to this, mitigative measures should be developed to avoid impacts to identified CHLs.

2.14.2 EVALUATION

Overall, the background research and use of the available IKLRU information have been well implemented in both the CHR (Appendix S) and the Stage 1 AA.

The AA report effectively compiled supporting data to develop a comprehensive understanding of past land use within the LSA and RSA. Nibinamik recognizes that making recommendations in such a remote area can be challenging. However, those provided, while consistent with the S&Gs, do not appear to fully reflect the knowledge gathered as part of the background research. Nibinamik understands that within the Cultural Resource Management industry the S&Gs are considered a baseline but that they do not reflect best practices and current knowledge. Among First Nations and archaeologists familiar with central and northern Ontario, the limitations of the central and northern Ontario potential modelling and test pit survey methodology are perceived to be quite restrictive considering that test pit surveys are limited to within 50 m of modern waterways.

In Southern Ontario, the model is up to 300 m from water, so it is unclear why central and northern Ontario use a much shorter distance when reliance on fresh water is the same. While the study area is plentiful with fresh water, extending the modelling even up to 150 m from water sources would greatly expand the areas requiring test pit survey and would better reflect the Nibinamik understanding of past land use. This is supported when looking at the travel routes in the CHR Figure 5, where their alignment is partially dictated by major water sources but also includes overland transit between waterways for several kilometres. Nibinamik asserts that the key question is not whether the area had archaeological potential, but whether any remaining evidence could be reliably detected.

This raises concerns about the recommendations that the remainder of the LSA (outside of the three categories of archaeological potential) be considered of low archaeological potential. Due to the exemption provided by the S&Gs in Section 1.3.4, these areas may not be subject to investigation prior to WSR construction. Nibinamik understands that evaluating remote areas is challenging and that the risk of impacting unknown archaeological resources may be higher, but argues that a more balanced approach is warranted. Risks due to this uncertainty are compounded by the Draft EA/IS's redaction of the potential modelling. It is difficult to evaluate the overall risk and understand the total impact that this survey exemption may have on Nibinamik rights and interests.

The CHR recognizes that additional information is needed to determine next steps and to develop appropriate mitigations, which also requires broader engagement with First Nations, including Nibinamik. As noted in the reports, the study area has been used for at least 5,000 years, and that use extends to Nibinamik, who has not been provided meaningful opportunity to share IKLRU data that could expand existing CHLs or identify additional ones.

2.14.3 RECOMMENDATIONS AND REQUESTS

As outlined above, the AA complies with the S&Gs but does not augment the requirements to reflect best practices and current knowledge. Based on these concerns, Nibinamik makes the following requests:

- The archaeological potential model be revised to increase the buffer attributed to modern waterways to a minimum of 150 m.
- The area of the LSA that was considered to have low archaeological potential be reevaluated based on IKLRU information provided by Nibinamik.
- The Draft EA/IS's use of the exemption from S&Gs 1.3.4 must be reconsidered. Nibinamik asserts that site visits and the Stage 2 assessment can be completed in phases, aligned with the construction of road segments, to improve access to previously remote areas.
- The WPT must develop a chance find protocol in collaboration with First Nations in the LSA. This protocol must, at minimum, ensure that all work is ceased once an artifact is discovered, and that potential community ownership is appropriately evaluated and respected when Anishinabek Nation artifacts or sites are encountered. This Chance Find Protocol must ensure that Nibinamik has decision-making power over the artifacts that belong to their community, and that no decision is made about these without their consent.

Nibinamik acknowledges and appreciates the CHR recommendations that further engagement with additional First Nations, including Nibinamik, should take place to inform existing CHLs and identify additional ones, with the intent of developing the most appropriate mitigation measures and protecting Nibinamik's cultural heritage. The Proponent must commit to this engagement prior to any regulatory decision being made on the Project.

2.15 EFFECTS OF THE ENVIRONMENT ON THE PROJECT

2.15.1 SUMMARY OF DRAFT EA/IS CONTENT

The purpose of this Draft EA/IS section is to understand potential risk and impacts, specifically to the road infrastructure and human safety, as result of the environmental condition and climate change. This section includes strategies to improve road safety and build a road that is climate resilient to increased rainfall, flooding, wildfire, etc. These strategies are aimed at maintaining the operational condition of the WSR over 75 years and keeping the road open, as well as addressing potential concerns for construction and worker safety. The Draft EA/IS acknowledges that an essential part of considering how to build a road resilient to climate change includes identifying and minimizing road construction risk to the surrounding community.

Existing conditions within the climate LSA (50 km from the Project centreline) are characterized by short, cool summers and extended cold winters with lower precipitation rates than in southern Canada. The Draft EA/IS reviewed meteorological data from 1981–2010 from nearby monitoring stations with estimated corrections for the more northern location of Webequie community. Future climate projections were found using the highest emission scenarios for the years 2020–2100 for both annual and seasonal trends. The future weather predictions included:

- Mean annual temperatures will increase, the season most effected being winter.
- Number of days with warmer temperatures in the summer months will increase as well as number of days with extreme cold temperatures in the winter.
- Annual precipitations will raise steadily while dropping in the summer season, however daily precipitation rates are not expected increase significantly.
    - Climate models do not project an increase in maximum precipitation and show maximum daily precipitation below the historical data.
- The standardized precipitation evapotranspiration index indicates a slight water deficit on an annual basis; this would reduce water surpluses.

To inform the climate change assessment, observations from Webequie's Draft Community-Based Land Use Plan were included. This plan contains input from Knowledge Holders and community members:

- Observed changes in weather patterns in recent years including more mild winter temperatures, less rainfall, and less snowfall; and
- Over the last twenty years there has been less ice buildup on the river, shortening the winter road season.

The Draft EA/IS identified climate hazards for a vulnerability assessment including, wind, fog, freezing rain, high intensity rain or snow, the freeze-thaw cycle, permafrost degradation, erosion, and wildfire.

These hazards were then assessed for potential interactions with Project components followed by identifying the risks from those interactions. No climate hazard was identified as a moderate or high risk. There were five hazards mentioned that were not included in the analysis as they were not predicted to interact with Project components: heatwaves and extreme temperatures, hail of large dimensions, lightning storms, and extreme cold spells.

The proposed mitigation measures included generic engineering and design consideration and health and safety measures. These are largely noted as part of the justification for the Climate Risk Rating (AtkinsRéalis, 2024d, pp. Table 5-3). The Draft EA/IS does not clearly stipulate that these are mitigations. The Draft EA/IS concluded that no extra control measures were needed to address the potential impact of climate change on the Project. Adopting provincial standards, guidelines, and codes for design and operation and maintenance of provincial highways was determined to be sufficient in mitigating the impacts of climate change on infrastructure and human safety.

There is no cumulative effects assessment for this EA/IS component, as the purpose of the evaluation was to understand how climate change resiliency can be built into the WSR specifically.

2.15.2 EVALUATION

Nibinamik understands that the climate change prediction applies a robust, globally consistent prediction methods by using Coupled Model Intercomparison Project Phase 6. However, it is unclear how the inclusion of IK informed identification of risks, impacts, and mitigations. Nibinamik members noted climate change impacts such as shifting fish species (linked to hydrological change) and increased wildfire risk, both of which the Project area is vulnerable to.

Wildfire

While the Draft EA/IS considers climate resiliency in road design, it must also ensure the road does not worsen conditions that increase climate-related risks, such as changes to hydrology or human ignition sources that could exacerbate wildfire frequency and intensity.

Although roads can help address wildfire hazards by providing access for suppression or acting as firebreaks, they are also known ignition sources: “fragmentation causes substantial increases in simulated fire activity, which we suggest is the result of exacerbated human ignition potential” (Bowring, Li, Mouillot, Rosan, & Ciais, 2024). Mitigations must therefore balance protecting infrastructure with avoiding environmental changes that compound climate risks.

Nibinamik understands that the WSR may inherently serve as a firebreak. However, modelling demonstrated increase of heat and drier conditions which results in a medium uncertainty of risk but a probable increase of wildfire frequency. It is important that the Project does not impose change (mainly to the hydrological condition of the surrounding areas) and potentially exacerbate wildfire conditions. The addition of the road will increase the risk of human-caused ignition, as wildfires are

found to occur more frequently near human development and where humans have access (Coogan, Aftergood, & Flannigan, 2022; Camp & Krawchuk, 2017). Climate change is also going to increase the incidence and prevalence of drier conditions, which pose a higher risk of ignition (Coogan, Aftergood, & Flannigan, 2022). The Draft EA/IS acknowledges this and stated that the fire risk in the WSR area is often moderate to high during the summer and that wildfire frequency is continuing to increase (AtkinsRéalis, 2025). Nibinamik asserts that these conditions can be proactively addressed through design considerations.

Land use modifies the structure of flammable biomass and is associated with increases in both human- and lightning-induced fire frequency (Camp & Krawchuk, 2017). For example, through the removal of trees and other vegetation, dead, dry material is left behind, promoting a structure that is more favourable to burning and opens up the canopy, allowing for higher insolation thereby increasing drying (Camp & Krawchuk, 2017).

Roads travelling through forested areas create linear effects by opening canopies leading to edge zones with modified microclimates (Narayanaraj & Wimberly, 2012). These effects extend into the interior forests, posing fire risks beyond the road itself (Narayanaraj & Wimberly, 2012). The western portion of the WSR will have a 35 m ROW on either side, creating the linear edge. Nibinamik is concerned that this linear edge may be a source of increased fire risks, despite being described as a fire break.

Climate Data and Hydrology

It is unclear whether the modelling encompassed the coverage of weather data necessary (the Draft EA/IS used data from 1981 to 2010) to prove sufficient resiliency in the design and measures to address the most significant potential weather events.

Nibinamik is also concerned about the consideration of precipitation within the Intensity-Duration-Frequency (IDF) data. The Draft EA/IS highlights that “the worst-case scenario (SPP-5) must be considered, since there is no guarantee that GHG emission reduction measures will enable the SSP-2 scenario targets to be achieved” (AtkinsRéalis, 2024d, p. 23). There is a 53% probability that 180 mm of precipitation (according to the SPP-5, highest emission scenario) could occur within 100 years and a 95% probability at that 120 mm of precipitation could occur within 25 years (according to the SPP-2 lower emission scenario) (AtkinsRéalis, 2024d, p. Section 4.2). The Draft EA/IS further establishes that "historical IDF curves remain representative of reality over time” (AtkinsRéalis, 2024d, p. 26).

The IDF data predictions note that in an SPP-5 (highest emissions) scenario, the 100-year rain event would produce 180 mm of precipitation. The 1:100-year event based only on historical data would see a lower maximum of 113 mm of precipitation. The Draft EA/IS has proposed the mitigation to apply the historical 1:100-year design criteria for culverts and bridges, plus 30 to 40% to account for an increase of IDF. A 40% increase from 113 mm would result in the design criteria accommodating approximately 158 mm of precipitation. Not only does the proposed mitigation fall short of the 180-mm capacity (as the SPP-5 scenario suggests is prudent), but the design mitigation does not state which IDF criterion has been applied.

While high intensity rainfall and torrential freshet are considered to be highly probable, the Draft EA/IS only has moderate confidence these will occur, which in turn results in a moderate probability of erosion as part of the Climate Risk Analysis. The ranking of moderate confidence is inconsistent with the statement that IDF data predictions are accurate and the need to consider (and design) at the worst-case emission scenarios in the climate assessment. The ultimate outcome of the probability and confidence ranking is a low-risk profile. Nibinamik is concerned that this low-risk assertion is not accurate, nor congruent with the lived reality where Canadians are experiencing more intense, frequent, and consequential weather events (Environment and Climate Change Canada, 2023).

2.15.3 RECOMMENDATIONS AND REQUESTS

The environmental, financial, and social cost of climate change related impacts is on the rise (Environment and Climate Change Canada, 2023). This Project is in a position to proactively mitigate potential costs and risk through improved monitoring and engineering that are above and beyond the status- quo of provincial standards and guidelines.

Nibinamik members highlighted climate change concerns for the region, including drying (changing hydrology) and wildfire; the recommendations below reflect these concerns.

Climate Data and Hydrology

A robust and comprehensive climate dataset must be used to ensure reliable predictions of local climate trends and potential extremes. Climate projections should incorporate both pre-1981 and post-2010 data to provide a more accurate basis for road design. The Project should also clearly commit to applying the SPP-5 (highest emissions) scenario as the standard for design criteria, as this represents the most prudent and precautionary approach. Clear commitments to the most conservative projections will provide assurance that road design is robust enough to withstand climate-related impacts over its full 75-year lifespan.

Mitigation measures must specifically align with the precipitation predictions outlined under the SPP-5 scenario. Current commitments to apply a 1:100-year design standard with a 30–40% increase from the IDF is inadequate, as this still falls short of the 180 mm precipitation event projected under SPP-5. Culverts, bridges, and drainage infrastructure must therefore be designed to accommodate these maximum predicted volumes to ensure the long-term integrity and safety of the road.

Engineering and design must be informed not only by technical models but also by IK. Nibinamik members have observed changes in snowfall intensity, flooding patterns, and freeze-thaw cycles that directly affect the land and hydrology. These observations should be formally integrated into the climate baseline to strengthen the accuracy of predictions and ensure that lived experiences of extreme events are not excluded from design considerations.

Given the 75-year planned operational lifespan of the road, adaptive management is essential. The Project should include commitments to ongoing climate and hydrological monitoring, with thresholds established that would trigger infrastructure upgrades or modifications if conditions exceed predicted values. This ensures that the Project remains resilient to unforeseen extremes and protects Aboriginal and Treaty Rights and community safety over the long term.

Wildfire

The road itself may act as a firebreak, emergency egress for citizens, and provide access for firefighters. Effective firebreak design must be deliberately planned, with impacts fully assessed and discussed through a process consistent with FPIC. Strategically locating turnouts and rest areas could enhance connectivity to water sources for firefighting or provide safe havens for firefighting personnel. In addition, the ROW could serve as a future corridor for communication infrastructure to support emergency management and public safety—elements that should be integrated into Project design.

While roads may aid suppression efforts, they also increase wildfire risk by facilitating human access, introducing ignition sources, and altering hydrology. To mitigate these risks, appropriately sized culverts should be installed to maintain hydrological connectivity across the ROW and prevent drying effects that exacerbate wildfire potential. See Section 2.3 on additional recommendations to address concerns related to hydrology. Furthermore, signage highlighting wildfire risk should be installed to encourage safe behaviour and reduce the likelihood of human-caused ignitions.

2.16 ENVIRONMENTAL OBLIGATIONS AND CLIMATE CHANGE COMMITMENTS

2.16.1 SUMMARY OF DRAFT EA/IS CONTENT

The purpose of this section is to understand how the Project effect will hinder or contribute to the Government of Canada's ability to meet its environmental obligations and its commitments to climate change. The section focused on the net or residual effects of the Project excluding mitigation measures and follow-up monitoring programs.

Convention on Biological Diversity

The Convention on Biological Diversity is adopted across the globe and came into force in Canada on December 29, 1993. As a signatory to the Convention, Canada commits to conserve biodiversity, sustainable use of its components, and the fair and equitable benefit sharing of utilization, particularly with Indigenous Peoples and local communities.

Canadian legislation that supports the implementation of biodiversity commitments includes the *Species at Risk Act* (2002), *Canada Wildlife Act* (1985), and *Fisheries Act* (1985), all of which were considered for the Project. Along with this are the supporting documents of the Canadian Biodiversity Strategy (1995), Biodiversity Outcomes Framework (2008) and the 2020 Biodiversity Goals and Targets for Canada. The Draft EA/IS identified five (5) of the 19 targets under the Biodiversity Goals and Targets related to the Project's effects and management:

- Security of species at risk, wetland conservation, sustainable harvesting (with restoration and management), maintenance of Indigenous traditional land use, and IK respect and integration in Project decision making.

The assessment considered the following effects, which are detailed in their respective sections:

- Potential effects to fish and fish habitat
- Effects to species at risk: caribou boreal population, wolverine, little brown myotis northern myotis, wetland songbirds, shorebirds, raptors and lake sturgeon.

The Draft EA/IS asserted that no net adverse effects were expected to be significant and no net effects were expected to hinder Canada's ability to meet its obligations to the Convention on Biological Diversity. Many characterizations of the effects were assessed under the assumption that mitigation measures would be 100% successful.

Amended Recovery Strategy for Woodland Caribou

The Amended Recovery Strategy for woodland caribou includes the goal to achieve self-sustaining local populations in all boreal ranges where the caribou are distributed in Canada to the extent possible. Meaning, the population can reproduce and survive despite natural and human-induced environmental changes. The Project is located within the Far North range which is considered to be population able to "maintain self-sustaining status". This range requires that at least 65% of habitat remain undisturbed.

The Draft EA/IS identified Project effects to woodland caribou habitat–loss, alteration, or damage–as not significant and not expected to hinder Canada's amendment strategy.

The Convention on Wetlands of International Importance Especially as Waterfowl Habitat (Ramsar Convention)

Under the Federal Policy on Wetland Conservation (1987), Canada is to promote the conservation of its wetlands to sustain their ecological and socio-economic functions into the future, which is outlined through a series of goals. Canada is a signatory of the Ramsar Convention, an international treaty focusing on conservation of wetlands and international importance through the "wise" use of wetlands. There are 37 wetlands located in Canada designated as Wetlands of International Importance. The closest designated wetland to the Project is the Polar Bear Provincial Park, located approximately 250 km northeast, outside of the Project LSA and RSA. The region supports various breeding populations of waterfowl and large mammals.

The Draft EA/IS does not expect the Project to have effects on the Polar Bear Provincial Park. As well, net effects of the Project were not predicted to hinder Canada's obligations to Ramsar based on the Draft EA/IS Section 11 assessments to wetlands.

Convention for the Protection of Migratory Birds in the United States and Canada

An international agreement, the Convention was signed in 1916 by Canada and the United States to protect migratory birds and came into effect in October of 1999 in Canada. The Convention's required legislation can be found in the *Migratory Birds Convention Act*, 1994, *Migratory Birds Regulations* 2022, and the *Migratory Bird Sanctuary Regulations*. The Convention provides management

of migratory bird species through sustainable hunting and conservation of the populations which are expected to result in sustainable migratory bird populations. Conservation principles and tools are outlined in the Convention's Parksville Protocol, including restoring depleting populations and protecting habitat necessary for conservation of migratory birds.

The Draft EA/IS focused on migratory songbirds (such as the Tennessee warbler, orange-crowned warbler, palm warbler and alder flycatcher) in Sections 12 and 13, which deemed effects not significant. The Draft EA/IS does not expect the Project to hinder Canada's ability to meet the above obligations.

Canadian Net-Zero Emissions Accountability Act

As the only commitment considering climate change in the Draft EA/IS, the *Canadian Net-Zero Emissions Accountability Act* (S.C. 2021, C. 22) obligates transparency and accountability to Canada's efforts in achieving net-zero GHG emission by the year 2050. The 2030 Emissions Reduction Plan outlines actions and measures to ensure emissions are reduced across Canada's economy to reach a target of 40–45% reduction in emissions from 2005 levels by 2030 and place the country on a path to reach net-zero emissions by 2050. There is also the 2021 Reference Case which has established a baseline for the federal 2030 Emissions Reduction Plan as of November 2021 based on implemented and funding strategies and measures.

Based on the assessment in Section 9 of the Draft EA/IS, the Project's net effects, despite contributing to Canada's GHG emissions, were evaluated as not hindering Canada's abilities to meet obligations to the *Canadian Net-Zero Emissions Accountability Act*.

2.16.2 EVALUATION

The assumption that this Project will not have any negative influence on Canada's ability to meet environmental commitments and climate targets ignores a foundational principle of a well-established field of science: road ecology. As outlined by prominent figures in the field, such as Richard T. T. Forman, the "road-effect zone" principle demonstrates that roads extend their negative impacts far beyond their physical footprint (Forman & Alexander, 1998). Roads are the infrastructure that support social and economic integration, but they also accelerate environmental pressures. This Project and the road network it creates will act as catalysts for further disturbance, opening previously undisturbed landscapes to colonization, resource extraction, and habitat fragmentation. This is a well-documented phenomena known as the "growth-inducing effect" (Johnson, Venter, Ray, & Watson, 2019). There are many examples of this chain of development leading to unsustainable land use patterns, which is why stronger environmental safeguards and climate commitments are essential to balance infrastructure needs with long-term ecological resilience.

> *Development lies at the root of rising cumulative impacts over time, resulting in significant environmental destruction in previously undisturbed areas. Much road building is poorly planned or conducted illegally; when environmental assessments do take place, they tend to focus only on the direct effects of the immediate road footprint and its use, while ignoring the likelihood of cumulative impacts and growth-inducing effects…The largest roadless areas of the world tend to correspond with regions such as intact ecosystems that have exceptional*

> *biodiversity, carbon, cultural, and health values, deserving special policy recognition, which are becoming increasingly valuable as they dwindle. Given the significant global increase in the number and extent of roads anticipated within this century, identifying and maintaining current road-free regions is essential for preventing escalating environmental degradation stimulated by infrastructure expansion. (Poley, Schuster, Smith, & Ray, 2022)*

Highway 63, leading into the Minable Alberta Oil Sands Region (MAOSR), which facilitated new access into a remote, previously undisturbed landscape, is a Canadian example. Originally a two-lane gravel road, North of Fort McMurray the corridor is now partially a divided four-lane highway with an estimated 9 km^2 cleared ROW. As of 2022, data compilation by the Alberta Biodiversity Monitoring Institute (ABMI) indicated that the current disturbance footprint of MAOSR is approximately 1,355km^2 (ABMI, 2024). This does not account for the additional cumulative effects, but demonstrates how a 9-km^2 road footprint can facilitate an additional 1,346 km^2, or 14,956% increase in disturbance. To provide a specific example of the cumulative effects, 21.9% of wetlands within the MAOSR have been impacted between 2000 to 2018 alone "which has well-documented consequences for a variety of ecosystem services, not only related to wetlands" (Montgomery, Mahoney, Nasr, & Cobbaert, 2025).

The Draft EA/IS repeatedly suggests that impacts are not significant and cumulative effects are negligible. Nibinamik is very concerned that impacts of mining are ignored by the Draft EA/IS despite Canada's well-documented experience with mining, and the Project impacts being reasonably foreseeable as a gateway to the Ring of Fire.

"From the perspective of Webequie First Nation, the WSR could be constructed and operated as a facility that only provides a connection between Webequie First Nation and the McFaulds Lake area to serve mineral exploration and future mining development activities, with no connection to the provincial highway system" (AtkinsRéalis, 2025, pp. 26-9). This Project, especially with its purpose of connectivity to the Ring of Fire development, can be reasonably expected to impact Canada's commitments to the environment and climate change:

- The Convention on Biodiversity and its 2030 Goals and Targets to halt and reverse biodiversity loss by 2030 and put nature on a path to recovery are contradicted, because of foreseeable mining and road related impacts such as:
    - Habitat loss and fragmentation;
    - Increased predation risk;
    - Impacts to aquatic ecosystems and fish habitat;
    - Introduction of invasive species; and
    - Alteration of hydrological and hydrogeological regimes critical for normal habitat and ecosystem function.
- The objectives of caribou recovery or population maintenance requirements are contradicted, by:

- Eliminating and fragmenting a large tract of undisturbed caribou habitat which is central to maintaining self-sustaining local populations.
- Creating new linear features increasing predation risk, which is a primary driver of caribou population decline.
- Lacking long-term wildlife monitoring to detect and address impacts to wildlife movement and mortality.

- Canada's commitment to conserve or use wetlands wisely is undermined:
  - Consideration of this commitment is limited to Ramsar sites, which does not fully encompass Canada's commitments.
  - Lack of commitment to offset wetland loss caused by removal.
  - Lack of long-term monitoring to detect and address impacts to wetland hydrology/hydrogeology from linear fragmentation.
- Migratory birds are reasonably impacted by habitat fragmentation, with the most significant impacts as a result of reasonably foreseeable mining.
  - Habitat fragmentation, dust, and noise reduces breeding success and traffic increases collision risks.
  - Mining project tailings ponds pose significant risk, especially for waterfowl.
- Canada's climate emission target of net-zero by 2050 is impacted:
  - The Project's contribution to scope 1 and 2 emission during construction are assessed, however Scope 3 is absent and consideration for the emissions of pending mining operations and other induced development are also unaccounted for.
  - There is no consideration for electrification or other means for reducing local and future emissions. For example, reducing Webequie reliance on diesel generation for power, and an understanding of how the future Ring of Fire will be powered and subsequent influence on emissions commitments.
  - Presumably any consideration for electrification will further impact wetlands, migratory birds, caribou, and biodiversity in general (as noted throughout this review).

The Project's lack of decarbonization and (direct or indirect) environmental impacts, in absence of specific monitoring to demonstrate effective mitigation, leads Nibinamik to conclude that the Project cannot reasonably state there is no influence on Canada's environmental and climate commitments. It is also reasonable to assume that any preliminary estimates of the significance of impacts will increase and further affect Canada's ability to meet climate targets and environmental commitments.

Nibinamik asserts that evidence demonstrates it is neither scientifically credible nor consistent with policy to conclude that this Project will have no adverse influence on Canada's environmental and climate commitments. The well-documented dynamics of road ecology and access-driven development—demonstrated globally (Forman, 1998; Johnson et al., 2019; Poley et al., 2022) and domestically in the Alberta Oil Sands Region (ABMI, 2024; Montgomery et al., 2025)—show that initial infrastructure projects act as gateways to cascading and often irreversible ecological change.

By extension, it is reasonably foreseeable for the proposed Project to contribute to:

- The continued loss and fragmentation of biodiversity and habitats, undermining Canada's obligations under the Convention on Biological Diversity.
- The further degradation of wetlands, contravening commitments under the Ramsar Convention and Canada's stated policies on wetland conservation and wise use.
- The fragmentation and disturbance of critical caribou range, fundamentally at odds with the federal caribou recovery strategy.
- The mortality and displacement of migratory birds, exacerbated by habitat loss, disturbance, and risks from industrial activities.
- The expansion of extractive industries with significant associated emissions, jeopardizing Canada's progress toward its net-zero 2050 target.

The Draft EA/IS also claims that this Project will contribute to Targets 12 and 15 of the 2020 Biodiversity Goals and Targets for Canada: supporting traditional land use and respecting IK. Nibinamik (among other Indigenous communities) have had limited consultation, and this technical review is the first opportunity to meaningfully contribute to the Project. Fulfillment of Targets 12 and 15 is predicated on the outcomes of consultation, final decision making as to how Nibinamik's input is incorporated into the Final EA/IS, and the success of the Project to mitigate impacts as determined through effectiveness monitoring. Nibinamik asserts that it is premature to suggest Targets 12 and 15 are supported through this Project.

The WSR is not an isolated transportation proposal; it is an enabling mechanism for large-scale regional development, with cumulative effects that are reasonably foreseeable, demonstrably significant, and directly relevant to Canada's binding international and domestic environmental commitments. The Draft EA/IS, by dismissing these cumulative and indirect effects as negligible, risks replicating the same oversight that has already undermined Canada's ability to meet past biodiversity and climate obligations. Without explicit safeguards, binding mitigation measures, and transparent long-term monitoring, all with direct and overt Indigenous inclusion, approving this Project would place Canada further off course from meeting its legally recognized and internationally reported goals.

2.16.3 RECOMMENDATIONS AND REQUESTS

Nibinamik asserts that by completing the ongoing RA, there is opportunity to address the regional challenges posed by this Project. The Project scope should include a mandate for environmental

offsets and restoration. The Project should include requirements for wetland offsetting and replacement within the wetland RSA, and reforestation to offset the Project footprint, ideally within local areas affected by wildfire or other disturbance. To ensure that mitigations are effective and work to achieve their intended objective, there must be robust long-term monitoring and adaptive management programs developed that incorporate Nibinamik IK. Conservation or land set-aside should be identified and protected from future disturbance. Nibinamik also recommends that incentives for electrification or renewable energy supply be used to ensure emission reductions over the WSR lifecycle.

2.17 PROJECT CONTRIBUTIONS TO SUSTAINABILITY

2.17.1 SUMMARY OF DRAFT EA/IS CONTENT

The Draft EA/IS considers the Project to be a sustainable initiative that aligns with both Indigenous and government planning and principles. Sustainability is defined by Webequie and government standards through tools such as Webequie and Ontario development plans, and is guided by sustainability principles from the IAAC. The Project's foundation is Webequie's own plans, including its Community Readiness Plan, Comprehensive Community Plan, and Community-Based Land Use Plan. These plans are rooted in the customary teachings of Webequie Elders and leaders. The Project is an Indigenous-led effort designed to create employment and economic development opportunities, thereby contributing to the Nation's goals of self-determination and economic sustainability.

The Draft EA/IS highlights that the Project may support the United Nations Sustainable Development Goals (SDGs), particularly by enhancing economic growth and accessibility for Webequie. This is predicated on robust planning and design, the inclusion of IK into VCs, setting a foundation from Webequie community plans, and creating a Project compatible with government initiatives. This claim is asserted through and evaluation of four principles (as prescribed in the TISG):

- **Interconnectedness of human and ecological systems:** The assessment emphasizes the dependence of human well-being on the health of the land, water, and wildlife. Potential cascading effects are considered, such as impacts on surface water affecting human health.
- **Well-being of present and future generations:** The Project is framed as a tool for cultural and economic revitalization, improving access to goods, services, transportation, healthcare, and traditional activities, while mitigating the effects of western societal influences on Indigenous ways of life.
- **Maximizing benefits and minimizing negative impacts:** Design and mitigation measures are intended to balance positive and adverse outcomes, though details of implementation remain at a high level.
- **Precautionary principle:** Potential risks are identified, with high-level commitments to mitigation, monitoring, and follow-up programs.

2.17.2 EVALUATION

While the Draft EA/IS highlights that sustainability is a central principle, Nibinamik considers several critical technical and regulatory shortcomings to be evident.

Sustainability is defined by Webequie and government standards. The engagement and consultation section highlights issues of importance and the essential value of bringing in key issues and IK from local communities such as Nibinamik. Key issues of importance that are addressed by the Project align with the SDGs, which is an admirable standard for comparison. However, in absence of free, prior, and informed consent from Nibinamik through Nation-specific engagement processes, the Project falls short of meeting another important United Nations principle, ratified through Canada adopting UNDRIP. While UNDRIP does not form part of the SDGs, it sets an important framework for achieving the SGDs. With this in mind, not only do all other Project components require more robust involvement from Nibinamik to meet the threshold of FPIC, UNDRIP and SDG, but their definition of "sustainability" must be considered in evaluating the Project Contributions to Sustainability.

The Draft EA/IS considers long-term planning and design to result in a sustainable Project, and the various assessment studies contained with the Draft EA/IS are meant to prove the WSR will have a sustainable outcome. As presented in Figure 26-1 from Section 26 of the Draft EA/IS, the ecological condition influences all other aspects of well-being, including Aboriginal and Treaty Rights. The bulk of potential deficiencies in the Draft EA/IS noted throughout this technical review, create uncertainty regarding the Draft EA/IS's assertions that the Project will not result in impacts to Nibinamik rights. The Draft EA/IS contains numerous uncertainties in the baseline data collection and effects assessment, many of which are identified by the Draft EA/IS. While the Project states that is has applied a robust mitigation hierarchy (to mitigate away uncertainty), Nibinamik's technical review offers suggestions for improvement in addressing uncertainties. It is clear that IK has not fully informed the indicators, criteria, metrics, or significance determination that drive the assessment.

The Draft EA/IS presents sustainability as an outcome rather than a process requiring continuous oversight, adaptive management, and inclusive engagement. This technical review highlights the bias in the Draft EA/IS claim to have developed a Project which alleviates the potential concerns implicit in the TISG-noted principles. The Draft EA/IS's assertion that the Project fully addresses TISG principles appears overstated. Without full integration of IK/TEK from all potentially impacted Nations, including Nibinamik, and without detailed mitigation and monitoring plans, the claim that the Project is inherently sustainable is unsupported.

Further to discipline-specific deficiencies, the cumulative effects assessment is limited, particularly regarding impacts across the wider Ring of Fire. Without a robust RA incorporated into this assessment, assertions regarding sustainability and minimal adverse effects cannot be considered reliable.

2.17.3 RECOMMENDATIONS AND REQUESTS

Robust contribution from all affected First Nations, including Nibinamik, has not been embedded into this Project. Nibinamik's specific process for consultation has not been implemented, which precludes

Nibinamik from considering how this Project can achieve FPIC. This Project should strive not only to meet the mentioned SDGs but also UNDRIP and FPIC. It is recommended that the WPT engage with Nibinamik to fully understand what mitigations and accommodations are required to obtain FPIC from Nibinamik.

The content within this report highlighted challenges with the Draft EA/IS content and its predicted results. It is not clear that the assertion of Project sustainability is justified. To improve the Project's potential for sustainability, Nibinamik recommends that the Ring of Fire RA be completed first. The completion and integration of the RA and ongoing involvement of Nibinamik (among other first Nations) should serve to reduce uncertainties and reduce the risk of irreversible harm by way of improving the identification of relevant mitigations.

3.0 SUMMARY AND RECOMMENDATIONS

Nibinamik's key concern is that the regulatory review of the WSR is moving forward before the comprehensive RA for the Ring of Fire has been completed. Proceeding with Project approval in advance of the RA creates a significant risk that decisions will be made without a complete understanding of the long-term, synergistic regional impacts.

Nibinamik acknowledges the WPT's efforts. However, Nibinamik finds the Draft EA/IS to have notable deficiencies that limit the ability to fully evaluate the Project's effects, particularly regarding Nibinamik rights and interests, and the broader regional context of development. The Draft EA/IS determines significance of potential effects based on a biased scoring system that downplays impacts. The current approach often presents a piecemeal view, failing to adequately capture the cumulative and interconnected nature of environmental and socio-economic impacts to Aboriginal and Treaty Rights and Homelands.

> *[We are] Anishinaabe people who can be one with the land and harness the energy that comes from within. Steel and concrete does not have the energy of the forest, Colonial laws and policies dictate how to live …[we] can demonstrate [our] morals and values, rights to be sovereign, practice the governance of the clan system; once [colonial] depletion take place this cannot be recovered. The environment was plentiful, people live in harmony and this was lost through loss of the environment and loss of governance systems. How is this preserved for the next generation, the same feeling for what we adults had as children? [It] needs mother nature to be intact for physical, mental and spiritual health. (Ogamakan, Michael Sugarhead)*

Nibinamik recognizes the benefits of road access for Webequie First Nation and supports improved infrastructure, as well as sharing this desire for their own community. Nibinamik wants to support the Webequie community in realizing the benefits of a road and avoiding undue regulatory delay or impacts to Aboriginal and Treaty Rights (unforeseen or otherwise). However, these benefits must be realized in a manner that does not compromise Aboriginal and Treaty Rights or ignore potential cumulative impacts. Therefore, it is essential that the WSR approval conditions explicitly require the incorporation of the RA outcomes once available. Project-specific mitigation and monitoring measures should also be designed to respond adaptively to findings from the RA, ensuring that local

and regional environmental, social, and rights-based considerations are addressed in a coordinated and integrated manner.

The recommendations and requests from this technical review can be summarized into the following themes:

- Governance, Rights, and Process:
  - Complete the RA prior to any WSR approvals; integrate results into Project design and mitigation.
  - Ensure Nibinamik-led IK informs mitigation and monitoring plans (follow-up effectiveness monitoring), supported with resources and timelines.
  - Uphold FPIC by establishing a Nibinamik-specific consultation framework with adequate capacity funding.
  - Revise the significance determination framework, which is currently biased toward proponent-led thresholds and does not adequately incorporate Indigenous Knowledge or lived experience of impacts.
  - Deficiencies with the significance determination and the cumulative effects assessment must be addressed. A comprehensive assessment for all disciplines is necessary to account for the combined impacts of the WSR with all other existing and reasonably foreseeable developments, especially those facilitated by the road. The measure for determining "reasonably foreseeable" must include common awareness and anecdotal knowledge, rather than tied only to the degree of project-specific planning or certainty.
- Engagement and Participation:
  - Ensure meaningful and ongoing engagement across the full Project lifecycle; Include Nibinamik representatives in monitoring, stewardship, and adaptive management programs.
- Cultural Heritage and Archaeology
  - Reassess archaeological potential using IK; expand survey areas and reclassify "low potential" zones.
  - Avoid overuse of Standards & Guidelines exemptions; complete phased Stage 2 assessments aligned with road construction.
  - Develop a chance find protocol with First Nations that ensures community ownership of artifacts and cultural sites is respected.
  - Identify and protect CHLs through engagement with Nibinamik.
- Climate Change and Hydrology:

- Apply the SPP-5 (highest emissions) climate scenario for all design criteria, incorporating pre-1981 and post-2010 data.
- Design hydrological infrastructure (culverts, bridges, drainage) to accommodate projected precipitation events under the SPP-5 scenario.
- Integrate IK into climate baselines, including observations of freeze-thaw cycles, snowfall, flooding, and drying.
- Commit to adaptive management with thresholds that trigger infrastructure upgrades if climate conditions exceed predictions.

- Wildfire and Safety:
  - Design the road as an effective firebreak with dual use for firefighting and emergency egress; include turnouts and water access points.
  - Mitigate wildfire risks related to increased human access with signage, hydrological connectivity (culverts), and monitoring.
  - Future-proof the ROW as a corridor for emergency management and communications infrastructure.
- Environment and Offsets:
  - Commit to wetland replacement and forest reforestation offsets within the RSA, ideally in wildfire- or disturbance-affected zones.
  - Identify conservation lands or set-asides to buffer against future disturbance and support Canada's climate and environmental obligations.
  - Strengthen long-term monitoring of wildlife movement, mortality, and wetland hydrology, incorporating IK into adaptive management.
  - Provide incentives for emissions reduction, including electrification and renewable energy supply.
  - Revisit fish presence and use field surveys with improved methodology, to avoid impacts to valued species and their habitats.
  - Address cumulative effects assessment deficiencies by requiring a comprehensive integration with the RA finding and comprehensive follow-up program to demonstrate the assessment predictions are accurate.
- Economic and Community Benefit:
  - Ensure equitable employment, training, and procurement opportunities for Nibinamik citizens, with early planning.

- Establish community-specific mechanisms or funding supports if Project benefits are unequally distributed.
- Require the Project's contribution to fulfilling constitutional and Treaty obligations as part of the economic environment assessment; including commitments to revenue sharing to ensure that Nations benefit economically, and can better enable their ability to capture the positive effects of development (WSR and regional) within their Homelands.

- Community Safety, Identity and Well-Being:
  - Enhance community safety and cultural continuity by incorporating Indigenous languages and place names into road signage and implementing road security measures.

Additional detailed concerns and their associated requests and recommendations are provided in the comment tracking table in Appendix A.

CLOSING

Based on Nibinamik's comprehensive review of the Draft EA/IS, several issues require immediate regulatory attention under both the federal IAA and Ontario's *Environmental Assessment Act* (OEAA). The most urgent priority concerns the sequencing of assessments. Under s.6(1) and s.22 of the IAA, cumulative and regional effects, as well as impacts on the exercise of Aboriginal and Treaty Rights, must be meaningfully assessed before Project-level decisions are taken. Proceeding with the WSR application in advance of the Ring of Fire RA would contravene these statutory requirements and risk creating irreversible authorizations without an adequate understanding of the full scope of environmental and rights-based impacts. Similarly, the OEAA requires that alternatives and cumulative impacts be considered in a manner that ensures decisions are made with full knowledge of broader ecological and social effects. For these reasons, regulatory approval for the WSR must be postponed until the Regional Assessment is completed and its findings are integrated into the Project assessment.

A second critical issue is the requirement for equitable and meaningful consultation. Under both federal and Ontario law, consultation processes must respect the governance authority of Indigenous Nations and support their active participation not only in the initial assessment but across all stages of project planning, construction, operation, and closure. The current process does not yet achieve this standard. A restructured consultation framework is therefore required that ensures Nibinamik is engaged on their own terms, with adequate capacity funding, and with regulatory conditions mandating their ongoing role in monitoring, mitigation, and adaptive management.

Deficiencies in the cumulative effects assessment and determinations of significance also require consideration. The IAA mandates that cumulative environmental, health, and socio-economic effects be fully assessed, while the OEAA requires assessment of cumulative environmental effects and consideration of reasonably foreseeable future activities. The Draft EA/IS falls short of these obligations and the outcomes leading the Project cumulative effects assessment are skewed to minimize the predicted impact.

To comply with federal and provincial requirements, the cumulative effects assessment should be redone with IK informing the criteria, metrics and threshold of significance. At a minimum the Project must be required to integrate the RA outcomes, paired with a comprehensive follow-up program and offsetting requirements. This follow-up program must be designed to test predictions against observed outcomes, include community-defined indicators, and establish adaptive thresholds and corrective actions co-developed with Indigenous Nations. Offsetting must be established to protect areas of cultural importance and buffer against the biased interpretation of impacts from the Draft EA/IS.

The follow-up program development must reach Nibinamik's expectation for FPIC. The plans must be developed on a sliding scale of direct involvement in collaboration with Nibinamik, as prioritized by Nibinamik. To meet expectations, the plans must establish measurable performance criteria, adaptive management thresholds infirmed by IK, and transparent public reporting mechanisms. These components would ensure accountability to the outcomes predicted in the EA/IS and create actionable enforceability when thresholds are exceeded. Not only must these plans be co-developed, but they should also be co-implemented with Nibinamik, to ensure that monitoring frameworks are culturally relevant, defensible, and compliant with UNDRIP.

The financial benefits recognized for Webequie First Nation, as well as for the provincial and federal governments, are substantial. Development within Treaty Territory must not proceed without equitable benefit-sharing for all Treaty signatories whose lands and rights are directly affected. Nibinamik's Aboriginal and Treaty Rights will be impacted not only by the Project itself but also by the induced development facilitated by the WSR. In alignment with the principles of UNDRIP and the requirement of FPIC, meaningful and deep consultation with both the provincial and federal governments is required to determine how they will uphold the honour of the Crown, fulfill the Duty to Consult, and implement Canada's UNDRIP commitments, including fair compensation for the occupation and use of Nibinamik's Homelands.

The WSR represents a significant opportunity for Webequie First Nation, yet this review highlights that its development must proceed with full recognition and respect for the rights, knowledge, and long-term well-being of all affected First Nations, including Nibinamik First Nation. Moving forward, the Project must adopt a truly integrated, regional approach that accounts for cumulative effects, ensures equitable and meaningful Indigenous participation, and incorporates robust, adaptive, and culturally informed mitigation and monitoring strategies. Achieving these outcomes is critical to realizing the Project's benefits without compromising environmental integrity, cultural continuity, or Indigenous governance responsibilities. This approach also necessitates a shift in the regulatory process, ensuring that the RA informs future conditions for the WSR, and a much more comprehensive follow-up program is implemented to compensate for the significant deficiencies of this assessment. Future regulatory and operational conditions must effectively address cumulative impacts, respect Indigenous Rights, and uphold Indigenous stewardship and governance responsibilities throughout the life of the Project.

APPENDIX A: COMMENT TRACKING TABLE

GENERAL

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
1	General: Indigenous Knowledge and Land and Resource Use Program	n/a	The Project is undergoing an EA/IS process without adequate support opportunities for Nibinamik to participate in the process meaningfully. There has not been a Nibinamik-specific Traditional Knowledge and Land Use Study (TKLUS) nor a baseline study for Nibinamik existing conditions conducted in the context of the WSR. Without the information from these studies, it is impossible to adequately assess the effects of this project on Nibinamik's Aboriginal and Treaty rights and title.	The proponent must support Nibinamik in conducting a TKLUS and baseline study. The assessment of potential effects and mitigation and follow-up measures must be implemented based on the results of this study.
2	General: Socio-Economic Baseline Determination and Existing Conditions	n/a	Many of the effects assessments, including cumulative effects assessment, and consequently the proposed mitigation and follow-up measures, focus largely on the impacts of the Project on Webequie First Nation. Limited data is available for Nibinamik especially with respect to the socioeconomics components such as health and economics. While this may in part be due to a lack of available information and data of surrounding First Nations in the LSA and RSA, the EA/IS cannot be considered complete without an accurate baseline which is required to undertake an assessment of effects on surrounding communities, including Nibinamik.	Expanding on the previous recommendation (Comment 1), it is critical that impacts specific to Nibinamik's socio-economic baseline be established, assessed and mitigated in the EA/IS. This assessment must include information gathered during the eventual TKLUS and must be validated by Nibinamik. Nibinamik must also be included in decisions to determine the impacts, develop mitigation monitoring and adaptive management, and accommodations.

3	General: Mitigation and Monitoring Plan Development Timeline and Commitment	n/a	The Draft EA/IS defers detailed mitigation and monitoring plans to later stages and other proponents, relying on unproven assumptions—such as 100% effective invasive species management—to dismiss impacts. This lack of defined measures and contingency planning makes the assessment speculative, creates uncertainty about protections for Nibinamik's Rights and interests, and undermines accountability and adaptive management.	Nibinamik requests meaningful involvement in drafting, reviewing, and co-developing all mitigation and monitoring plans for both construction and operations, with adequate capacity funding to support participation. Plans must embed Nibinamik knowledge and governance from the outset, include clear adaptive management frameworks with thresholds based on IK and corrective measures. There must be collaborative decision-making beyond simply document review as part of regulatory submissions.
4	General: Reversibility	n/a	The potential Project effects are considered to be reversible, asserting that "the net effect is reversible if the roadway was removed." Nibinamik firmly rejects this assertion, given that (1) the scale and extent of changes due to such substantial linear infrastructure will not return to pre-impact conditions within an ecologically or culturally relevant timeframe, and (2) the fact that the road will not be removed. Once built and functioning, the road will be used for multiple generations to come and is more likely to see upgrades than costly full-scale removal and rehabilitation.	The Draft EA/IS must recognize that, once built and functioning, the road will not be removed. The effects assessment must recognize that the only appropriate result for the Reversibility criterion is "irreversible." Nibinamik requests that this be changed throughout all assessment tables and scoring, where reversible determinations are based on the road removal.
5	General: Significance Determination	n/a	The Draft EA/IS applies effects classification criteria in a way that constrains significance determinations, down-weights potential impacts, and minimizes responsibility for mitigation or accommodation. The ranking criteria applied obscures the seriousness of potential outcomes. This approach, combined with minimal integration of IK/TEK, particularly weakens assessments of surface water, groundwater, wildlife, fish and fish habitat, non-traditional	The Draft EA/IS constrains significance determinations while failing to reflect IK/TEK, undermining a core outcome of the assessment that defines when cumulative effects assessment and additional mitigation or accommodation is required. Nibinamik views this as invalidating the effects assessment and requests the assigned score are updated with clear IK/TEK integration, and a conservative ranking classification. This must be accompanied by a reassessment of significance. Where

			resources use, GHG emissions, making it difficult or impossible for effects to be deemed "significant."	uncertainty exists, and robust monitoring programs supported by adaptive management must be established. These measures must embed IK/TEK alongside western science and include ongoing engagement with Nibinamik to ensure accountability and protection of rights.
6	General: Cumulative Effects and Climate Change	n/a	The Draft EA/IS, minimizes the RFDs and potential confounding effects of climate change which should be considered as part of the cumulative effects assessments. These omissions are critical because the WSR is expected to enable further industrial development, thereby amplifying climate-related risks, including wildfire frequency and air quality degradation. These vulnerabilities are especially true for remote communities such as Nibinamik that are reliant on winter roads and country foods. The current assessment is limited in its ability to evaluate and mitigate cumulative effects and, as such, rights impacts. Given Ontario's Bill 5 reforms and federal Bill C-5's Building Canada framework — both of which create legal pathways to accelerate and centralize project approvals — the Draft EA/IS's current minimization of reasonably foreseeable developments and climate confounders is unacceptable. In a fast-track regulatory environment, a robust, rights-centered cumulative effects assessment is essential to protect Treaty and Aboriginal rights.	Nibinamik requests a more robust and precautionary approach, one that considers the synergistic effects of development enabled by WSR and the compounding implications for Indigenous resource access, safety, and land use in the context of a changing climate. Limitation of RFDs is not evidence based nor reflect the context of Bill 5 and C-5 for development within the Ring of Fire area, and as such must be reconsidered. Cumulative effects assessment adjustment to effectively understand Aboriginal and Treaty rights impact must not only include expanded spatial and temporal boundaries (additional RFDs) but also include Indigenous-led metrics and thresholds. For example, see comment #58 below on the deficiency of the atmospheric cumulative effects assessment to consider potential effects pathways aside from GHG emissions, including acid rain from mining or the lack of geological consideration for acid rock drainage from the RFDs (Section 2.2, above).

GEOLOGY, TERRAIN, SOILS

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
7	SECTION 6: Assessment of Effects on Geology, Terrain and Soils		The Draft EA/IS recommends that aggregate/rock for the proposed road is sourced from a glaciofluvial, ice-contact deposit area near the south-east side of Winisk Lake (AtkinsRéalis, 2025). This presents the potential for several unmitigated impacts: • Eskers are important corridors which improve wildlife movement efficiency and are used by many species including Caribou. Removal of an esker linkage area may permanently alter local wildlife migration patterns (Willison et al., 2004); • Eskers are also known to function as important denning habitat for several valued species including foxes, wolves and bears. Friable glaciofluvial deposits, combined with good drainage and, often, a favourable solar aspect, can lead to long-term occupancy of denning sites within eskers (Gallant et al., 2014).	The WSR Draft EA/IS must describe the currently unmitigated impacts of quarrying esker material, which is known to function as important movement corridor and denning habitat for various valued species.
8	SECTION 6: Assessment of Effects on Geology, Terrain and Soils		The Draft EA/IS recommends aggregate/rock source location is described as an ice-contact deposit. Aggregate extraction at a known permafrost location (within a discontinuous permafrost zone), has the potential to act as a catalyst for localized ice melting and related thaw strain.	The WSR EA/IS must describe permafrost removal and thaw strain risks associated with the road, and in particular within the ice-contact glaciofluvial deposit recommended as the quarry site.
9	SECTION 6: Assessment of Effects on		The degradation of soil structure within the project footprint will increase the risk of erosion and sedimentation into adjacent creeks and wetlands, as well as increased	More detailed maps, models and descriptions of the expected erosion, sedimentation, and dust fallout patterns from the WSR. These should also show best-available predictions

	Geology, Terrain and Soils		dust fallout in all downwind areas. The Draft EA/IS states that erosion will be largely mitigated by the highest winds occurring during the winter when the ground is frozen. However, each decade, as winter becomes shorter due to anthropogenic climate change, the erosion and sedimentation risk of this project into surrounding water bodies will increase. Furthermore, the dust from increasingly hotter, drier summers will negatively impact vegetation communities.	of these models within the context of the warmer and drier climate projected for Ontario over the expected project lifetime of the WSR.

SURFACE WATER

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
10	Draft EA/ IS Section 7.0 Surface Water	Section 7.1.2 Consideration of Input from Engagement and Consultation Activities	The engagement record highlights concerns regarding the mobilization and release of mercury and methylmercury due to changes in water flow. Despite the importance of these concerns for environmental and human health, the results of mercury and methylmercury analyses are not presented in the main body of the Draft EA/IS and are instead buried within an appendix. This placement demonstrates insufficient consideration of Indigenous knowledge and community concerns, given the potential significance of these contaminants to local ecosystems and human health.	The Draft EA/IS should demonstrate meaningful consideration of Indigenous knowledges and concern by clearly presenting the results of the methyl mercury and mercury monitoring. Potential methylmercury release associated with changes to hydrology and hydrogeology in peatlands represents a significant risk to Nibinamik and our neighbouring communities. Given the importance of this issue, Nibinamik recommends that a dedicated follow-up mercury monitoring program is established, independent of the proposed water quality monitoring programs. This follow-up program should include multi-media monitoring across surface water, groundwater, wetlands, sediment, fish, and benthic communities, and ensure monitoring is conducted at ecologically and culturally relevant locations as determined by our knowledges. Addressing the very real

				potential harm from mercury release requires robust planning, monitoring, and management, with meaningful involvement from Nibinamik in the design and implementation of the program.
11	Draft EA/ IS Section 7.0 Surface Water	Section 7.1.4 Value Components and Indicators	The subcomponents identified for the Surface Water Resources VCs do not fully capture the concerns raised through Indigenous knowledge and consultation. Engagement results (Section 7.1.2) and the incorporation of Indigenous knowledge (Section 7.1.3) highlight community concerns for overall watershed health and the interconnectedness of water with other parts of the ecosystem. While the current subcomponents address surface water quality, quantity, and sediment quality, they do not capture broader changes to watershed health or ecological connectivity, leaving a critical gap in the assessment of potential impacts.	Nibinamik recommends the Draft EA/IS expand the surface water value components to explicitly include subcomponents of watershed health. This addition reflects the concerns raised in consultation records and align with Nibinamik's concerns for the project. The watershed health VC should emphasize the interdependence of water with surrounding ecosystems and ability to exercise traditional practices. The addition of this VC must be done in consultation with Nibinamik and our neighbouring nations to ensure concerns are adequately addressed by indicators and assessment methods. Assessing only water quality, quantity, and sediment quality is insufficient to capture potential disruptions to hydrological linkages, habitat connectivity, and the cumulative impacts of land use change.
12	Draft EA/ IS Section 7.0 Surface Water	Section 7.2.1.2 Surface Water Quantity	Peak discharge at the proposed waterbody crossings has been estimated using a suite of methods, with results varying significantly depending on the approach (e.g., up to 40% variation). The Index Flood Method was selected to represent peak flow, as it generally fell near the middle of the range of results. Nibinamik acknowledges the rigour and rationale provided in the hydrologic analysis. However, it remains unclear whether the methods employed are appropriate for estimating conditions during spring freshet in these snowfall-driven catchments. In addition, the analysis	Nibinamik would like ensure that the hydrologic methods applied are appropriately suited for northern Ontario hydrology. The final EA/IS should address how suitable the hydrologic analysis is for northern Ontario conditions, where catchments are marked by an abundance of lakes and wetlands, hydrologic regime driven by snow accumulation and freshet, and rivers subject to ice break-up and transport. The assessment should also include comprehensive cumulative effects assessment which discusses how potential changes to the regional climate and catchment characteristics (e.g., land use

			does not address important factors such as ice-jams, potential climate change effects, or land use changes, all of which could have cumulative effects which influence peak flow and waterbody crossing performance.	changes, increase in percent impervious) may impact hydrology and our ability to track natural versus project-related variation. Furthermore, it must be demonstrated that analysis or modelling conducted to size infrastructure is grounded in culturally relevant timescales and validated by Indigenous knowledge holders. Input data must reflect a timeframe meaningful to Indigenous experience. For example, a 30-year climate record is insufficient for determining design storms, as it does not encompass a full lifetime of observations. Members of Nibinamik possess memory and knowledge of climate events and river flows that have had significant consequences, and it must be clearly demonstrated that these observations are integrated into both analysis and design to ensure infrastructure is resilient and culturally appropriate.
13	Draft EA/ IS Section 7.0 Surface Water	Section 7.2.1.2 Surface Water Quantity	The Draft EA/IS notes that beaver activity occurs at some proposed waterbody crossing locations. Proposed mitigations are limited to removing dams in accordance with the Fisheries and Oceans Canada (DFO) *Code of Practice: Beaver Dam Breaching and Removal* during construction. While the DFO Code of Practice is designed to protect fish and fish habitat, it does not provide measures to protect beavers or their habitat, nor does it prevent future damming that could affect water flows. In fact, the DFO COP explicitly states that "the breaching or removal of a beaver dam may not necessarily prevent future beaver activity in the area" (Fisheries and Oceans Canada, 2025). Given that this mitigation will not prevent subsequent damming or contribute to the active management of beavers, additional	Nibinamik requests that the Draft EA/IS is updated to identify and implement further mitigation measures to address beaver activity. These measures should be protective of beavers and beaver habitat, prevent or manage future damming that could impact water flow and include adaptive management strategies. Nibinamik requests the right of first refusal for participation and development.

			mitigations must be identified and proposed to address potential ecological and hydrological impacts.	
14	Draft EA/ IS Section 7.0 Surface Water	Section 7.3 Identification of Potential Effects, Pathways and Indicators	The Draft EA/IS proposes that the floating road design will avoid potential ecological consequences of peatland drainage. While floating roads can mitigate some impacts, they cannot be considered impact-free. The feasibility and effectiveness of this design depend on site-specific conditions (e.g., peat depth, slope, in-situ strength), engineering design considerations (e.g., geotextile placement, road thickness, construction sequencing), and require robust monitoring to detect settlement and lateral displacement. The Draft EA/IS has not demonstrated that these factors have been fully considered, nor does it provide contingency plans in the event that site-specific conditions or design limitations reduce the effectiveness of the floating road as a mitigation measure.	The Final EA/IS must demonstrate advanced planning and site-specific feasibility studies to demonstrate that the floating road design will be an effective mitigation measure. Additional management and contingency planning, as well as a robust follow-up monitoring program should be developed to verify the effectiveness of floating roads as a mitigation measure. Contingency measures should clearly articulate situations where site conditions or design limitations may compromise the effectiveness of floating roads and provide available adaptive management measures. Nibinamik requests right of first refusal for the development and participation of follow-up programs.
15	Draft EA/ IS Section 7.0 Surface Water	Section 7.3 Identification of Potential Effects Pathways and Indicators	Further to Comment 14 above, if it cannot be demonstrated that floating road construction will avoid impacts to hydrology and peatland drainage, additional assessments and mitigation measures are required. In particular, enhanced wildfire monitoring, prevention, and response measures must be developed. Without these safeguards, there is a heightened risk of peatland destabilization, altered hydrology, and increased vulnerability to wildfires, which could result in long-term ecological damage, loss of wetland function, and adverse effects on culturally and ecologically important landscapes.	Nibinamik recommends that the Draft EA/IS include additional assessments to confirm that floating road construction will not adversely impact hydrology or peatland drainage. Where risks remain, robust mitigation measures must be implemented, including enhanced wildfire monitoring, prevention, and response strategies. These measures should be designed to prevent peatland destabilization, maintain natural hydrological function, and protect ecologically and culturally significant areas throughout construction and operation.

16	Draft EA/ IS Section 7.0 Surface Water	Section 7.3 Identification of Potential Effects Pathways and Indicators	Equalization culverts are another proposed mitigation measure to maintain hydrologic connectivity. The success of these culverts in maintaining drainage and hydrologic connection depends on the spacing and orientation (SarasSaraswati, 2020).	To ensure that culverts are installed as an effective mitigation measure, it is recommended that culvert placements and design should be developed by a qualified environmental professional. Culvert designs should also include strategies to monitor success and adaptive management plans.
17	Draft EA/ IS Section 7.0 Surface Water	Section 7.3 Identification of Potential Effects, Pathways and Indicators	The Draft EA/IS has not adequately consider the effect pathway between vegetation clearing/grubbing and changes to surface water quality. Vegetation in wetlands and riparian areas provides critical functions for maintaining water quality. Its removal can create short-term effect pathways, as organic matter and sediments may be mobilized into surface water bodies, potentially altering water chemistry and impacting aquatic ecosystems.	Nibinamik requests that the Final EA/IS is updated to include the effect pathway between vegetation and grubbing and surface water quality changes. The assessment should also be updated with available mitigation measures and effects assessment.
18	Draft EA/ IS Section 7.0 Surface Water	Section 7.4 Mitigation Measures	The mitigation measures state that waterbody crossing structures will be designed to accommodate the 100-year peak flood event, with additional up-sizing to account for climate change. However, the Draft EA/IS later indicates that "structures from a hydraulic perspective have been designed to pass frequent floods or precipitation events (2-year return period) with minimal effect on stream discharge" (AtkinsRéalis, 2025, pp. 7-53). Clarification is needed to confirm that both extreme flood events and routine flows are adequately addressed in the design. Failure to account for this full range of flows could result in insufficient conveyance during extreme events, leading to flooding, damage to infrastructure, reduced fish passage, impaired navigability, and increased erosion or scour at crossings.	Nibinamik would like more information to ensure that the sizing of water body crossings will mitigate impacts: • Please clarify whether the hydraulic design of the Project's bridges and culverts will be sufficient to convey the 100-year flood. The design should demonstrate that a full range of flows, including low-flow (drought) and high-flow conditions, has been considered to prevent impacts on stream discharge, fish passage, water navigability (where applicable), and erosion/scour. • Specify which design storm will be applied for scour analysis and check flow and explain how these considerations will be incorporated into the overall water crossing design. • Describe what additional measures have been considered to convey storm events

				or mitigate flooding. Alternatives to up-sizing infrastructure, such as maintaining or restoring riparian areas and wetlands, or incorporating natural design features, should be thoroughly evaluated and compared to ensure the most effective and ecologically sensitive approach is implemented.
19	Draft EA/ IS Section 7.0 Surface Water	Section 7.4 Mitigation Measures	A key mitigation measure to prevent changes to water quality in the LSA is the implementation of a water quality monitoring program. The Draft EA/IS proposes a Surface Water and Storm Water Management Monitoring Program for both the construction and operational phases, however, details regarding the program are vague. While Nibinamik supports the use of a monitoring program, it must be demonstrated that the program has robust capacity to detect and respond. to changes in water quality. This must include the ability to comparing observed concentrations to baseline conditions at ecologically and culturally important spatial scales. The Draft EA/IS has not shown that baseline conditions have been sufficiently characterized across all potentially impacted watersheds. The water quality monitoring program to track and respond to temporary changes, but this measure alone may not adequately mitigate water quality impacts in the broader RSA. Alterations in hydrology, land use, and dewatering caused by road installation, particularly through peat-rich environments, may lead to regional impacts on surface and subsurface flows. These changes could dewater peatlands or alter water chemistry, including acidity, nutrient levels, particulate matter, and organic	To provide enhanced environmental protection from roadway runoff, a robust monitoring program is recommended. Nibinamik requests further consultation, engagement and capacity support to be included in the development of a robust monitoring program. The monitoring program should be considerate of known roadway runoff contaminants (e.g. nutrients, oils and grease, heavy metals, fertilizers, sediments, etc.). Monitoring should also consider sediment quality and monitoring signs of runoff pathways (e.g., gullies, bank erosion, muddy water, state of swales and vegetation). To ensure the program is successful in detecting changes on ecologically and culturally relevant scales, monitoring should be conducted throughout the broader watershed area at sites selected through engagement with Nibinamik and our neighbouring First Nations. The program must include provisions to collect additional information on baseline quality at these sites, to ensure there is adequate data to draw comparisons and implement adaptive management. Members of Nibinamik request for involvement in the development and execution of these plans, including drafting the program, collecting field data, and the interpretation of results and decision making. This program may be best support through a

			content. Furthermore, long-term operation of the road will increase the potential for water quality degradation from roadway runoff, which contains a range of chemicals known to have unexpected impacts on aquatic ecosystems.	Watershed Stewardship Initiative, which allows for collaboration across our Nations to support Nation-to-Nation decision making on watershed-scale issues.
20	Draft EA/ IS Section 7.0 Surface Water	Section 7.4 Mitigation Measures	Nibinamik is pleased that low-impact stormwater management infrastructure is proposed for the WSR. Low-impact infrastructure such as enhanced swales must be monitored and maintained regularly to ensure they are operating as designed. Maintenance must include the removal of sediments (as well as debris, litter, etc.). to remove accumulated pollutants from the infrastructure and prevent the recycling of pollutants to stormwater. The Draft EA/IS has not provided plans for maintenance to ensure longevity of low-impact design and efficacy of this mitigation measure.	Nibinamik requests that a stormwater maintenance and monitoring plan be developed for low-impact infrastructure. The plan should specify responsibly, procedures, maintenance schedule, and adaptive measures to address deficiencies. Implementing this plan helps ensure stormwater infrastructure is operating properly for the life of project and continue to offer protection to water quality and aquatic habitat. Nibinamik also recommends that WPT consider engaging in research and development initiatives for low-impact design features. Studies on the efficacy of low-impact design and treatment capacity for roadway runoff, are well suited to be conducted in the area given the remote nature, timing of the development, abundance of reference sites and growing body of knowledge demonstrating impacts to freshwater ecosystems from roadway runoff (Cojac, 2024). Nibinamik requests that community members be provided with an opportunity to engage in any research and development activities to help offset potential impacts.
21	Draft EA/ IS Section 7.0 Surface Water	Section 7.4 Mitigation Measures	Soil compaction during construction activities can significantly affect runoff rates. Section 7.4.2 of the Draft EA/IS indicates that disturbed areas associated with temporary support infrastructure will be restored through soil decompaction and	Clarity is needed for the use of soil decompaction as a mitigation measure. Please discuss if and when soil decompaction may be needed and provide a discussion of risks and benefits of applying soil decompaction within peatlands and riparian areas. This discussion

			the placement of similar native soils, or more permeable soils where practical. However, mitigation measures listed in Appendix E and Table 714 do not explicitly include soil decompaction as a mitigation measure. While soil decompaction can improve permeability, it also carries risks to soil transport, soil structure, and overall soil health. These risks are particularly pronounced in muskeg environments, where mechanical disturbance can destabilize peat and alter local hydrology, potentially leading to longer-term impacts on water flow and peatland/wetland function. Disturbance of peatland soils may also release contributions of heavy metals, sediments and organics stored in peatlands to surface waters.	should include a wholesome consideration of peat restoration techniques available to restore hydrology and hydrogeology in wetlands. Where decompaction is proposed, a site-specific soil management plan should be developed in consultation with Indigenous knowledge holders and soil specialists to evaluate potential risks to peat stability, soil structure, and hydrological connectivity. Alternatives to mechanical decompaction (such as natural revegetation, low-impact surface treatments, or controlled hydrological restoration techniques) should be prioritized in peatland and muskeg areas. Monitoring of post-construction soil permeability, stability, and hydrological conditions should be included as part of the environmental monitoring plan, with adaptive management measures applied if impacts to wetland or peatland function are detected.
22	Draft EA/ IS Section 7.0 Surface Water And Section 4.0 Project Description	Section 7.4 Mitigation Measures Section 4.3.3.5	The Draft EA/IS notes that winter maintenance activities may affect surface water quantity, but the proposed mitigation measures are not clearly defined. Snow removal and placement can alter the amount and distribution of snow available to recharge surface water, groundwater, and wetlands within the affected catchments. Consideration should also be given to how snowpack placement and management will influence both snowmelt dynamics and stormwater management. Furthermore, the project does not plan to use salt or sand for de-icing. It is not clear how road ice will be safely managed to prevent spills and accidents.	The Final EA/IS should provide clear and detailed mitigation plans to address the potential effects of winter maintenance. These plans must explicitly consider how snow removal and storage may alter local water balances, affect snowpack distribution and melt, and influence both surface and subsurface hydrology. Mitigation should include: • Locating designated snow storage away from sensitive features; • Protection of wetlands, riparian zones, and other vulnerable areas; • Measures to maintain natural drainage patterns and peak flows; • Adaptive management, including monitoring and corrective actions, to ensure the effectiveness of mitigations over time; and

				• Provide clarity on road ice management to prevent accidents and spills that may impact surface water.
23	Draft EA/ IS Section 7.0 Surface Water	Section 7.4.1 Dewatering, Water Taking and Discharges	Several Project activities require water taking and discharge either temporarily (e.g., installation) or for a pro-long period (e.g., aggregate pits). The Draft EA/IS suggests that PTTW will be used as mitigation measures prevent impacts to water quantity and quality. Nibinamik is concerned that PTTW applications do not include steps for consultation. Further, some technical assessments required for certain PTTW applications (e.g., EASR registry for a highway project) do not require that a technical assessment is physically submitted to the ministry or reviewed. The requirements of the technical assessment may also not provide robust enough assessments for the sensitive nature of the pristine environment.	Nibinamik requests the Province and the WPT conduct further consultation when applying for any water taking permits related to the project. Consultation should be initiated at the start of the technical assessment, where Nibinamik should be given the opportunity to comment on the scope of the assessment to ensure that technical assessments are robust and consider cumulative effects. Consultation should continue until permits have been issued and permit conditions (e.g., monitoring requirements) are co-developed with, and approved by, Nibinamik and other consulted Nations. To further mitigation effects from water taking and discharge, Nibinamik requests that a Discharge Management Plan is developed. This management plan should include a description of water taking and discharge locations, timing, frequency, volumes, quality as well as a discussion of discharge site conditions. Site descriptions should identify any environmentally sensitive areas which may require additional protection (e.g., spawning habitat) and identify available on-site mitigation measures.
24	Draft EA/ IS Section 7.0 Surface Water	Section 7.5 Characterization of Net Effects	The criteria for characterizing net effects considers input from Indigenous people, but states “no input was received during engagement and consultation” (7-68). Section 7.1.2 (Consideration of Input from Engagement and Consultation Activities) and Section 7.1.3 (Incorporation of Indigenous Knowledge and Resource Use) contain ample feedback on the importance	Nibinamik requests further clarification on how the information provided through IKLRU studies and consultation and engagement have been considered in the characterization of net effects. Justification is needed as to why Indigenous perspectives were not incorporated into this section, despite the ample feedback provided on the water value component. Nibinamik requests the

			of water and concerns regarding project interactions.	recharacterization of the net effects and significance based on meaningful consideration of concerns. This characterization must demonstrate explicit consideration of Indigenous input in the characterization and determination of significance for net effects related to water.
25	Draft EA/ IS Section 7.0 Surface Water	Section 7.5 Characterization of Net Effects	Table 7-15 summarizes the predicted net effects on surface water resources. Magnitude of change is described relative to existing conditions (e.g., a low magnitude indicates changes that are characteristic of current conditions). For surface water quantity, all potential effects—including water taking, discharge, land cover changes, and waterbody crossing installation—have been characterized as low magnitude. However, Section 5 of the Natural Environment Existing Conditions Report (NEEC) notes that the Project will affect 18% of the total tertiary watershed area and that waterbody crossings may impact 5–7.3% of the mean annual flow within tertiary watersheds. The Draft EA/IS does not provide sufficient evidence to demonstrate that this level of change can reasonably be considered characteristic of with existing conditions.	Further justification is needed to support the conclusion that net effects to surface water quantity are of low magnitude. This justification may be best achieved through RA, as previously recommended by Nibinamik. Given the nature of water to accumulate impacts across the watershed, and the connectivity of water to our ecosystems, potential changes to this value component must be well understood. If this conclusion is substantiated without further support from an RA, Nibinamik requests the following is provided as justification: • Clear methods for estimating mean annual flow at waterbody crossings and across tertiary watersheds. • An explanation of how mean annual flow estimates were validated using spatially and temporally relevant field data. • Data-supported justification demonstrating that predicted changes in mean annual flow are consistent with baseline conditions. • Evidence showing that predicted effects will remain limited to the LSA, rather than extending to hydrologically relevant boundaries (e.g., sub-catchment, RSA). • An assessment of how projected flow changes account for cumulative effects related to groundwater and wetlands. Nibinamik requests that impacts to surface water be re-characterized based on improved

				justification. Recharacterization should consider impacts to surface water as moderate to high in magnitude, and significant, if predicted changes cannot be shown to fall within the natural range of variation for the region.
26	Draft EA/ IS Section 7.0 Surface Water	Section 7.5 Characterization of net effects	The Draft EA/IS suggests that the Erosion and Sediment Control Plan is sufficient to prevent net effects to surface water quality. While Nibinamik appreciates the proposed mitigations, the effectiveness of these mitigations is dependent on design and execution.	Nibinamik recommends that an Annual Follow-Up Monitoring Program is developed for the Erosion and Sediment Control Plan. The Follow-Up program should assess the success of mitigation measures, provide the results of any issues or malfunctions, and report on adaptive management employed. The intent of the follow-up program should be to assess the efficacy of these measures in prevent sediments from entering waterways and adapt the Sediment Control Plan as needed as the project continues.
27	Draft EA/ IS Section 7.0 Surface Water	Section 7.5.2.1 Changes in Surface Water Quality	The Draft EA/IS applies a Western-centric approach to quantifying effects on the hydrological regime. By focusing on watershed area loss relative to overall watershed size, the analysis fails to account for effects that may disproportionately impact hydrologically diverse environments (e.g., wetlands, recharge areas, discharge areas) and the aquatic and terrestrial habitats they support. It also overlooks how these impacts may be intensified by seasonal patterns or interannual climate variation. Changes to water levels, such as prolonged low water, pose direct and significant consequences for Nibinamik, restricting community access to the land and undermining the ability to meaningfully exercise constitutionally protected Rights and Interests.	Without a fulsome discussion of how hydrologic changes may affect sensitive environments, Nibinamik cannot be assured that impacts to surface water quantity are being sufficiently mitigated. The Draft EA/IS must be strengthened to clearly describe how seasonality, interannual climate variation (e.g., wet and dry years), and long-term climate change were considered in determining and characterizing potential and cumulative effects. It must also demonstrate how these factors were incorporated into mean annual flow estimates and other key metrics used to assess the extent of potential impacts.

28	Draft EA/ IS Section 7.0 Surface Water	Section 7.1.2 Consideration of Input from Engagement and Consultation Activities Section 7.3 Identification of Potential Effects, Pathways and Indicators Section 7.5.2 Predicted Net Effects	The Draft EA/IS states that in the event of "flows greater than the design flow, there could be reduced water crossing clearance, impounding of water upstream of the road alignment, overtopping of the roadway and water crossings, and/or damage to the road structure" (AtkinsRéalis, 2025, pp. 7-10). While changes to surface water quantity from waterbody crossings are discussed as a predicted net effect, it is unclear how potential downstream or knock-on effects on water and sediment quality have been considered. Additionally, the overflowing of roadside ditches is not identified as an effect pathway, and waterbody crossing impacts are characterized as temporary only. Flooding and road damage have the potential to degrade the surrounding environment, disrupt access, and increase the risk of accidents, spills, or the release of substances such as sediments and road materials. These impacts could lead to changes in surface water quantity, quality, or sediment dynamics, which in turn would directly affect Nibinamik's ability to exercise Rights and Interests.	Nibinamik appreciates that the crossings are sized with additional contingency (e.g., 1:100-year event), however, the Draft EA/IS has not described what mitigation and response measures are available in the event of water impoundment and road flooding. The Draft EA/IS should describe the mitigation and emergency response measures that will be implemented in the event that large flows impound water upstream of the roadway, overtop, or damage the roadway. These measures should ensure that environmental damage is minimized, restoration occurs in a timely manner, and that any potential impacts on access or safety are reduced.
29	Draft EA/ IS Section 7.0 Surface Water	Section 7.7 Cumulative Effects	The proposed road laterally crosses several catchments, where swales will divert water along the roadway and culverts will help promote surface and subsurface flow. While it is acknowledged that these mitigations are included in the design, the effectiveness of these mitigation measures depends on site characteristics, and laterally crossing catchments may still impact surface hydrology and peatland functions by modifying natural drainage patterns. Additionally, several proposed activities will remove or relocate water from catchments in the LSA, including snow	Further planning and management programs are required to ensure that catchment-scale water balances are maintained. The Final EA/IS cumulative effects assessment should explicitly present catchment-level water balances that account for cumulative water taking, discharge, and diversion associated with project construction and operation. This analysis must demonstrate that project activities will not adversely impact water quantity at the catchment level. In addition, the assessment should identify and discuss sensitive areas and traditional uses within each sub-catchment (e.g., spawning habitat,

			removal, dewatering, and other water taking activities. These effects may also be enhanced by the loss of vegetation and peat along the LSA leading to changes in infiltration, evaporation and transpiration. No catchment-scale water balances or cumulative effects assessments have been provided to demonstrate that cumulative effects to drainage, water taking and water relocation will not adversely impact water availability and distribution at the catchment scale. Without a clear, catchment-scale water balance assessment, the Draft EA/IS cannot demonstrate that Project-related water taking, discharge, and diversion will avoid adverse impacts on water quantity. Failure to account for cumulative changes at the catchment level may result in the dewatering of spawning habitats, reduced surface water availability for traditional harvesting, and altered navigability of water bodies relied upon for travel. Altering the catchment level water balance can lead changes in peatland hydrology, increasing risk of fire and loss of terrestrial habitat. These impacts would not only degrade ecological integrity but could also infringe upon Indigenous rights, limit access to culturally important areas, and erode community trust in the project's management of water resources.	traditional harvesting areas, navigable waters) to ensure these values are fully considered and protected.
30	Draft EA/ IS Section 7.0 Surface Water	Section 7.7 Cumulative Effects	The cumulative effects assessment is insufficient to assure Nibinamik that water resources will remain protected. The proposed road crosses three secondary watersheds that feed major river systems, including the Winisk, Ekwan, and Attawapiskat Rivers. The assessment is	The Draft EA/IS must include a comprehensive, watershed-scale cumulative effects assessment that extends beyond arbitrary quaternary watershed boundaries. This assessment should:

			restricted to the RSA, defined by quaternary watersheds crossed by the project. These arbitrary boundaries artificially limit the number of projects and RFDs considered in the cumulative effects analysis, overlooking the significance of these major river systems to Nibinamik and neighbouring Nations. Moreover, the assessment relies on other projects to implement site-specific mitigation measures, rather than providing a comprehensive evaluation of potential effects or coordinated strategies to minimize cumulative impacts.	• Include all relevant projects and RFDs that may influence the Winisk, Ekwan, and Attawapiskat river systems. • Evaluate cumulative impacts on water quantity, quality, ecological integrity, and culturally important uses. • Identify coordinated mitigation strategies, rather than relying on other projects to implement site-specific measures, to ensure cumulative impacts are meaningfully reduced. • Explicitly consider the importance of these major rivers to Nibinamik and neighbouring Indigenous Nations, including ecological, cultural, and subsistence values.

GROUNDWATER

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
31	Draft EA/ IS Section 8.0 Groundwater	Section 8.2 Existing Conditions	Ground elevations for well heads were determined using LiDAR imagery when available, or from the publicly accessible Canadian Digital Elevation Model (CDEM). The CDEM provides an accuracy of 0–5 m, whereas LiDAR offers a much higher resolution of 20 cm. Given that most wells are drilled to depths of less than 10 m, a 5 m elevation uncertainty could significantly affect the interpretation of water level measurements and the assessment of groundwater flow dynamics.	The use of LiDAR data is preferred to determine reliable groundwater elevation data. Groundwater elevations are used to determine groundwater-surface water interactions and potential impacts from dewatering. Using data that can have errors up to 5 m may introduce error into the Draft EA/IS and obscure potential impacts. Nibinamik requests that groundwater elevations be improved through additional LiDAR data collection or ground validation. The Draft EA/IS should also be explicit in which groundwater elevations are determined by LiDAR versus the CDEM dataset, and the level of uncertainty tolerated by the assessment. The level of accuracy/uncertainty tolerated by the

				assessment must be justified with scientifically relevant documentation or guidance or improved to meet accepted standards.
32	Draft EA/ IS Section 8.0 Groundwater	Section 8.2 Existing Conditions	The TSIG requires that the Draft EA/IS identifies and describes the location of all springs, including their use, potential future use, and importance to Indigenous peoples. The Draft EA/IS indicates no seeps or springs were observed during field work, but "no targeted surveys for this water resource feature were conducted" (AtkinsRéalis, 2025h, p. 136). The lack of targeted fieldwork does not reflect the level of assessment needed to protect this water resource.	A target spring study should be conducted to strengthen the Draft EA/IS. The spring study program should be guided by Indigenous knowledge holders and land users, who may be aware of current or historic springs and include opportunity for participation by Nibinamik. Springs identified must be mapped, described, and assessed for potential effect pathways. Mitigation measures should be presented, including spring monitoring programs. The Draft EA/IS should also discuss where in the study area conditions are favourable for springs (e.g., hill slopes, valley sides, soil permeability) and demonstrate how these areas were reviewed in the spring study.
33	Draft EA/ IS Section 8.0 Groundwater	Section 8.3 Identification of Potential Effects, Pathways and Indicators	The Draft EA/IS proposes that the floating road design will avoid potential ecological consequences of peatland drainage. While floating roads can mitigate some impacts, they cannot be considered impact-free. The feasibility and effectiveness of this design depend on site-specific conditions (e.g., peat depth, slope, in-situ strength), engineering design considerations (e.g., geotextile placement, road thickness, construction sequencing), and require robust monitoring to detect settlement and lateral displacement. The Draft EA/IS does not demonstrate that these factors have been fully considered, nor does it provide contingency plans in the event that site-specific conditions or design limitations reduce the effectiveness of the floating road as a mitigation measure.	The Draft EA/IS must demonstrate advanced planning and site-specific feasibility studies to demonstrate that the floating road design will be an effective mitigation measure. Additional assessments should address potential changes to both groundwater quantity (i.e., road barrier effect) and groundwater quality (i.e., peat compression), Additional management and contingency planning, as well as a robust follow-up monitoring program should be developed to verify the effectiveness of floating roads as a mitigation measure. Contingency measures should clearly articulate situations where site conditions or design limitations may compromise the effectiveness of floating roads and provide available adaptive management measures. Nibinamik requests

				right of first refusal for the development and participation of follow-up programs.
34	Draft EA/ IS Section 8.0 Groundwater	Section 8.3 Identification of Potential Effects Pathways and Indicators	Equalization culverts are another proposed mitigation measure to maintain hydrologic connectivity. The success of these culverts in maintaining drainage and hydrologic connection depends on the spacing and orientation (SarasSaraswati, 2020). These mitigation measures are especially important in low land areas, where no ditch drainage is proposed.	To ensure that culverts are installed as an effective mitigation measure, it is recommended that culvert placements and design should be developed by a qualified environmental professional. Culvert designs should also include strategies to monitor success and adaptive management plans. Designs should demonstrate that stormwater and runoff will be effectively managed, peatland hydrology will remain characteristic of baseline conditions, and that roadway flooding is mitigated.
35	Draft EA/ IS Section 8.0 Groundwater	Section 8.3 Identification of Potential Effects Pathways and Indicators	A preliminary water balance has been provided to satisfy the requirements of the TSIG but acknowledges that more sophisticated approaches are available. Nibinamik appreciates the preliminary estimates to support the impact assessment and supports that more detailed water balance modelling is needed to support the detailed design and impact assessment.	Nibinamik looks forward to a more sophisticated water balance to predict potential changes to groundwater quantity. As discussed in the surface water resources section, improved water balances should be conducted at the sub-catchment and watershed level to understand local and regional changes at hydrologically relevant scales. The Draft EA./IS should provide more detailed information on the proposed sophisticated water balance assessments, when this assessment will be complete, and information on how results from these detailed assessments will be used to inform the characterization of net effects, cumulative effects and mitigation measures.
36	Draft EA/ IS Section 8.0 Groundwater	Section 8.3 Identification of Potential Effects Pathways and Indicators	Nibinamik appreciates that monitoring will be conducted to assess settlement, serviceability and safety issues related to roads in peatlands during the operational phase.	Nibinamik requests further engagement to participate in the development and implementation of this monitoring program. Commitments for this program should be made clear in the Draft EA/IS mitigation measures. The program must also include adaptive management strategies and contingency plans. Nibinamik is very interested in the success of the floating road

				construction, as settlement and other issues may jeopardize the ability of the design to prevent changes to groundwater and surface water hydrology, risking the draining of peatlands.
37	Draft EA/ IS Section 8.0 Groundwater	Section 8.3 Identification of Potential Effects Pathways and Indicators	It is anticipated that 26,750 m^3 of sand and gravel will be required annually for roadway maintenance and repair, as well as for other project components. While it is encouraging that the Draft EA/IS considers repair quantities, it is concerning that this volume of material will ultimately be lost to the environment through erosion, ground compaction, or other pathways, not described by the Draft EA/IS. Material loss in this volume can potentially change surface water quality, alter performance of enhanced swales and other drainage features, or clog soil pores reducing groundwater recharge.	The Draft EA/IS must address how the annual loss of 26,750 m^3 of sand and gravel from maintenance activities could affect groundwater and surface water resources. This evaluation should include discussions of potential effects for increased erosion and sedimentation, or compaction. Impacts to design features, like enhanced swales, should be discussed. Where risks are identified, mitigation measures, such as sediment control structures, regular monitoring, and adaptive maintenance practices, should be clearly defined by the Draft EA/IS.
38	Draft EA/ IS Section 8.0 Groundwater	Section 8.3 Identification of Potential Effects Pathways and Indicators	Section 8.4.7 indicates that sewage effluent at construction camps and the MSF may be treated using septic tanks. However, mitigation measures in Table 8-18 state that "no septic systems (with potential leaching chambers/beds) will be used for sewage treatment" (8-52). Contradicting information undermines the effectiveness of mitigation measures and the assurance that groundwater quality will not be impacted. Improper septic management can cause nutrient loading, contamination, or other adverse effects on groundwater, surface water, and wetlands.	The Draft EA/IS should clearly identify and commit to a single sewage treatment approach for construction camps and the MSF. Inconsistencies between the assessment and mitigation tables must be resolved to ensure clarity and accountability. Sewage treatment methods should be supported by design details and monitoring plans that demonstrate how sewage effluent will be effectively managed.
39	Draft EA/ IS Section 8.0 Groundwater	Section 8.4 Mitigation Measures	While mitigations for waste management are provided for the construction phase, there is no Waste Management Plan proposed for the operations phase. The MSF is a permanent project component	The Operational Environmental Management Plan must be updated with a waste management plan. The plan must demonstrate that changes to groundwater and surface water quality will be effectively

			where waste will be generated from sewage, greywater, and solid materials. If not managed, this waste can contaminate groundwater and surface water, posing risks to aquatic ecosystems, wetlands, and other sensitive habitats. Effective waste management is essential to protect the ecological integrity of area. It is also noted that the effect pathway between solid waste management and surface water quality is not presented in the Surface Water VC assessment.	mitigated. The waste management plan must consider solid waste, wastewater, grey water, and hazardous waste that could be generated at the MSF during operations. Mitigations must be robust to prevent accidental wastewater discharge or illegal dumping during operations. The Surface Water VC Assessment must also be updated to include potential effects and mitigations for solid waste.
40	Draft EA/ IS Section 8.0 Groundwater	Section 8.4 Mitigation Measures	Water Quality Monitoring, as described in Appendix E, is identified as a proposed measure to mitigate potential changes in groundwater quality resulting from concrete foundations. However, the Water Quality Monitoring Program does not include specific commitments to monitor *groundwater*, nor does it propose monitoring for pH. This is a significant concern because changes in pH could adversely affect wetlands and other sensitive aquatic ecosystems. Additionally, concrete is known to leach toxic chromium (VI).	Nibinamik requests that the water quality monitoring program is improved to include site-specific commitments for groundwater monitoring. The water quality monitoring program must include specific provisions for groundwater monitoring, including monitoring locations and parameters. Groundwater monitoring locations should consider groundwater-surface water connections, peatlands, and the locations of impactful structures or activities (e.g., blasting sites, concrete footings). Water quality parameters must include relevant indicators such as pH, alkalinity, ORP and chromium (VI). Monitoring must be conducted near concrete foundations at both surface water and groundwater sites, as well as in connected wetlands. The monitoring program should include reporting measures and communication tools to inform Nibinamik and other users of the area if changes to groundwater are detected. Adaptive management strategies should be clearly included in water quality monitoring programs, and monitoring should continue until review by a qualified environmental professional identifies risk to groundwater or surface water quality has been mitigated.

				It is also recommended that all concrete wash water is removed and treated or disposed of off-site to provide robust environmental protection. Details of concrete wash water management should be outlined as a mitigation measure in the CEMP. Nibinamik requests further consultation and opportunity for participation in the development and execution of water quality monitoring programs.
41	Draft EA/ IS Section 8.0 Groundwater	Section 8.4 Mitigation Measures	Nibinamik finds instances where the Draft EA/IS presents mitigation measures in principle but does not translate them into concrete, actionable, or enforceable management activities. For example changes to groundwater quality are proposed to be mitigated by a program which does not monitor groundwater. Further, commitments have been made to Groundwater Management Plan in the consultation record, yet this plan has not been included in the mitigation measures, construction plans, or operational plans. Failure to execute mitigation measures eliminates their effectiveness in protecting groundwater and dependent ecosystems.	Nibinamik requests the Draft EA/IS is improved to ensure that all proposed mitigation measures and management commitments have been translated into actionable management plans, or other measures to ensure implementation. The Draft EA/IS should also ensure that consistent information is presented throughout.
42	Draft EA/ IS Section 8.0 Groundwater	Section 8.4.1 Vegetation Clearing ad Grubbing	The Draft EA/IS downplays the challenges associated with peatland restoration. Temporary supporting infrastructure is proposed to be restored to baseline conditions after construction; however, the restoration of peatlands is inherently complex. This is particularly true for groundwater-fed fens, which are known to be difficult rehabilitate successfully (Rodney A Chimer, 2017). It is also concerning that the stripping and removal of peat is characterized as a net benefit to groundwater quantity. While	Given the challenges of restoring groundwater-fed peatlands, additional information is requested to demonstrate the efficacy of reclamation plans. The Draft EA/IS should provide evidence that demonstrates reclamation feasibility and expected timeframes. Further justification should address that potential changes to groundwater quantity, surface hydrology, and peatland function can be effectively reversed as validated by monitoring data. Further mitigation planning should be conducted in consultation with Nibinamik to ensure that

			recharge rates may increase locally, the removal of peat will cause barrier effects and potentially disrupt regional peatland complexes, presenting a negative effect.	ecologically and culturally significant areas are identified and protected, and that the placement of temporary infrastructure avoids sensitive locations.
43	Draft EA/ IS Section 8.0 Groundwater	Section 8.4.5 Dewatering / Pumping	The information presented in the Draft EA/IS has not demonstrated that impacts from quarry and aggregates pits are fully mitigated: • Conflicting information has been presented on the presence of groundwater at ARA-4. Review of borehole logs indicate groundwater elevations at 1 to 2 mbgs at WQA-6 and WQA-7, respectively. • Quarry reclamation plans have not been provided to assure Nibinamik that site conditions will be restored to baseline hydrologic function. Quarries and pits are known to alter groundwater levels, flow pathways and increase the risk of sediment runoff, which may degrade aquatic habitat quality. Quarries strip natural vegetation, creating preferential flow pathways for groundwater recharge, where chemicals or fuels used in quarrying may be spread to groundwater more easily.	Nibinamik requests capacity support to be actively involved in the consultation and review of aggregate pit applications. Future permitting of these sites may require additional monitoring and assessment to ensure that potential impacts are fully identified and mitigated. As stewards of the land, Nibinamik's involvement in consultation and review processes is essential to ensure that assessments account for culturally and ecologically sensitive areas, and that mitigation measures are effectively implemented to protect connected water resources and dependent ecosystems.
44	Draft EA/ IS Section 8.0 Groundwater	Section 8.4.6 Road Construction	Road construction may compress peat, reducing permeability, changing groundwater flow directions and pathways, or alter groundwater quality. Despite these effects, "no further assessment is provided here due to uncertainty" (AtkinsRéalis, 2025, pp. 8-48). While a pre- and post-construction monitoring program is proposed, this language creates concern that project effects are not fully understood. Nibinamik remains concerned that road construction	Nibinamik understands the challenges associated with road construction on peatland. However, Nibinamik cannot accept that changes to groundwater quantity and groundwater quality from road construction are considered not significant while impacts are uncertain or not assessed. The Draft EA/IS should propose additional contingency measures, monitoring programs, adaptive management plans, and follow-up programs to help manage the uncertainty associated with road construction. Nibinamik requests

			will alter regional and local hydrology, and risk peatland drainage.	further consultation in the development and execution of such programs.
45	Draft EA/ IS Section 8.0 Groundwater	Section 8.5 Characterization of Net Effects	Nibinamik appreciates that preliminary estimates of dewatering rates and potential drawdown have been provided at this point in the assessment, however Nibinamik requires more hydrogeologic investigation is completed to understand potential impacts to groundwater resources, and well as the how changes to groundwater will impact surface water and wetlands. Technical deficiencies in the current assessment support Nibinamik's request: • The ZOI is described as "not anticipated to extend beyond the LSA," "may extend slightly beyond the LSA," or "could range from a few metres to a few hundred metres" (p. 856). Inconsistency and a high level of uncertainty suggest that potential affects to groundwater are not well understood. • Consideration of site-specific heterogeneity in hydraulic conductivity is not explicit. • The methods used to estimate the ZOI for structure foundation is not provided. • Groundwater drawdown is assumed at 4 m and sensitivity of this parameter on drawdown is not assessed. • The location and number of supply wells for construction are not known, meaning site-specific hydrogeologic characteristics are not considered in the assessment, nor the potential for overlapping drawdown.	Nibinamik requires more robust hydrogeologic studies are conducted to support conclusions of the Draft EA/IS. These studies must be grounded in site-specific data and robust hydrogeologic modelling. Operational plans, such as sequenced extraction to reduce the dewatered area, must be clearly presented along with feasibility assessments or other justification. The Draft EA/IS must demonstrate coherence between the estimated ZOI determined through hydrogeologic modelling and monitoring. The ZOI should consider the cumulative impacts of multiple dewatering activities, site-specific heterogeneity, and sensitive receptors within the ZOI.

			• The Theis method is applied to estimate drawdown for the supply wells. The Theis method is applicable to confined aquifers, where corrections can be made for unconfined conditions (e.g., Jacobs method). Confined conditions have not been confirmed, nor has the Jacobs correction been applied, potentially underestimating the ZOI. • The assessment assumes one tenth of the area will be dewatered at a time (200 m by 200 m), without justifying how this will be feasible in an open aggregate pit. The role of groundwater in sustaining surface water systems and peatlands is well established. For Nibinamik, it is therefore a priority that groundwater resources are carefully managed to avoid ecological disruption to the landscapes that support the community's ability to exercise traditional practices.	
46	Draft EA/ IS Section 8.0 Groundwater	Section 8.5 Characterization of Net Effects	Further to Comment 45 above, the effects assessment has not clearly described how dewatering activities could affect site-specific ecologically sensitive or culturally important areas. Dewatering can alter groundwater levels, reduce baseflow contributions to streams and wetlands, and disrupt hydrological connections that sustain sensitive habitats. These changes may in turn impact culturally significant landscapes.	It must be demonstrated that ecologically sensitive or culturally important areas will not be disrupted by dewatering. Further capacity support should be provided to Nibinamik to identify and map these areas through a TKLUS study. Site-specific maps should be developed to display the ZOI relative to ecological features (e.g., spring, wetlands, habitat, surface water). Specific mitigation measures, such as monitoring and adaptive management plans, must be developed to mitigate impacts to site-specific features within the ZOI. Assessments of the ZOI must be grounded in robust hydrogeologic modelling and consider the effects of cumulative or overlapping water taking activities.

47	Draft EA/ IS Section 8.0 Groundwater	Section 8.3 Identification of Potential Effects, Pathways and Indicators. Section 8.1.2 Spatial and Temporal Boundaries	The cumulative effects assessment should be completed at the regional scale (i.e., VC specific RSA). No RSA has been defined for groundwater resources, with the justification that "potential effects on groundwater resources are not expected to extend beyond the LSA" (EIS, p. 8-17). Furthermore, the LSA is limited to prescribed buffers of 1 km and 500 m from the road and support infrastructure, without regard for ecological or hydrologically relevant boundaries. Without a study area that is defined on regional and hydrological terms, the cumulative effects assessment cannot meaningfully identify, assess, or mitigate impacts at the regional scale.	The cumulative effects assessment should adopt study areas that are regionally and hydrologically relevant, such as watershed or aquifer boundaries. This approach is necessary to ensure that regional-scale changes to groundwater are meaningfully identified, assessed and mitigated. By grounding the assessment in ecologically appropriate boundaries, the integrity of interconnected ecosystems can be better protected to support Nibinamik's continued stewardship of the land and ability to exercise traditional land use and cultural practices. An enhanced cumulative effects assessment is necessary to inform an RA which should be completed prior to regulatory decisions on this Project.

ATMOSPHERIC ENVIRONMENT

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
48	Draft EA/IS Section 09 Atmospheric Environment	Section 9.1.6 Identification of Project Interaction with Atmospheric Environment and Section 9.3 Identification of Potential Effects, Pathways and Indicators	In Section 9.1.6 Project components expected to have potential effect on the atmosphere are not identified, instead a catch-all project component was developed for emissions, discharges, and wastes. This is designed to replace the need for outlining if there will be potential effects from the change in air quality, GHG emissions, vibration, sound and light for individual aspects of construction and operation. In Section 9.3 the pathway of effects identifies specific project components and the pathway for those components to create a potential effect, however, not clearly encompassing all project components.	Sections 9.1.6 and 9.3 should be aligned to provide a consistent and complete list of project components that may cause atmospheric effects. This will reduce uncertainty whether all relevant components are considered in the assessment. The lack of alignment raises concern that some sources of effect have been excluded. For example, See recommendations 49 and 50 below. The lack of congruency between these section highlights that there may be project components with potential effects that are not included in the effects assessment.

49	Draft EA/IS Section 09 Atmospheric Environment	Section 9.3.1 Change in Air Quality Section 4.4.2.2 Vegetation Clearing and Grubbing Section 4.3.3.6 Storage of Fuels, Explosives and Wastes Section 4.4.2.8 Potential Emissions, Discharges, and Wastes	This section identifies the use of vehicles and combustion engines as the only source of potential effects on air quality. This ignores the other project components: • Non-mobile equipment will be present. • The project description includes burning as a means to manage non-merchantable timber. • Fuel storage is anticipated, along with waste from heavy oil which may release emissions. • Domestic waste may be treated on site. • Dust will be created from quarries, stockpiles, construction, and road operation. The air dispersion modelling completed in section 9.3.1.2 and 9.3.1.3 do include dust but not consistently; quarry operation dust is excluded from operation phase assessment. Neither the operation phase nor construction phase assessment include emission from burning. The operation phase assessment also does not include MSF emissions from power generation.	It is recommended that even minimal potential contributions to effects are discussed and evaluated as part of the air quality assessment in the Final EA/IS. To assist in ensuring all potential impacts are considered, it is further recommended that the list in Section 9.1.6, identifying project component contributing to atmospheric effects, is completed in alignment with the project description (specifically Section 4.4.2.2, 4.3.3.6 and 4.4.2.8) to ensure the full spectrum of potential effects is captured for alignment throughout the Draft EA/IS. The exclusion of potential impacts from the air dispersion modelling suggests that either the mitigations should be 100% effective in eliminating the impact,(i.e., absolutely no burning should take place, and MSF power should be from renewable energy) or the modelling should be adjusted to accommodate all potential emission sources.
50	Draft EA/IS Section 09 Atmospheric Environment	Section 9.1.2 Consideration of Input from Engagement and Consultation Activities and Section 9.3 Identification of Potential Effects, Pathways and Indicators	Dust and Particulate matter are noted to be primary air contaminates from dispersion modelling, and persist despite the mitigation which is primarily road watering. Nibinamik members have noted the reduction of water levels, and uncertainties about water associated with climate change. Furthermore, the consultation feedback provided in Section 9.1.2 calls for long-term dustfall monitoring to understand the	To improve the performance of mitigations for dust and particulate matter it is recommended that the project consider road applications with a longer-term effectiveness than water. In comparison with other road applications water has a relatively short-term ability to mitigate dust, however, this must not be interpreted that there is a preference for chloride-based products or that the effects of other chemical applications are acceptable. Impacts of dust must not be traded for the impact from other potential chemical applications; Nature-based

			effectiveness of mitigations and address potential rights and environmental impacts. While the project description notes that gravel sections may eventually be resurfaced with asphalt (a good dust mitigation), this is a long-term solution and does not address short-term impacts.	alternative solutions should be applied to improve effectiveness of dust mitigation; and selected under the provision of Free Prior and Informed Consent. To ensure the mitigations are successful, a dustfall monitoring program should be established for construction and early operation. This should be paired with particulate monitoring at potentially affected sensitive (human occupancy) receptors. Receptors should be established through reconsideration of the spatial boundaries (see comment 51).
51	Draft EA/IS Section 21 Cumulative Effects Assessment and Section 09 Atmospheric Environment	Atmospheric Environment Section 9.1.5 Spatial and Temporal Boundaries	The LSA for air quality is a 1km buffer from the road centreline and a 500m buffer from temporary infrastructure. The RSA adds 5km to the LSA. These boundaries delineate the reasonably foreseeable projects included in the cumulative effects assessment. This boundary of the RSA and LSA ignores literature addressing particulate and dust transport from industrial activities, indicating movement can be up to hundreds of km from the source. Fine particulate matter ($PM_{2.5}$), including road dust source, have demonstrably had impacts from 10-30 km from sources and up to 100 km under favourable weather conditions (Phillips-Smith, et al., 2017) (Horb, et al., 2022) (Landis, et al., 2019). Further the reasonably foreseeable project list does not include potential forestry or other road projects and local Webequie sources affecting air quality such as the power plant. The Draft EA/IA consideration of air quality does not sufficiently meet the IAAC guidelines on cumulative effects assessment, nor does it apply appropriate	It is recommended that the RSA be expanded to cover the potential extent of air quality impacts. There are more reasonably foreseeable projects that will interact with the RSA (especially if extended appropriately), this include local Webequie sources as well as farther afield industrial activity. It is recommended that a much more robust and reasonable cumulative effects assessment is undertaken to comprehensively address the air quality and the Project contribution to cumulative effects, especially considering it is the gateway to Ring of Fire development. Accommodation measures to support reducing air emission should be considered, such as technology upgrades to the Webequie power plant. Mitigation to further reduce Project emissions should be employed such as renewable sources of energy for the camps and MSF. Additionally, given that the Draft EA/IA claim local vegetation will mitigate air quality impacts there should be offsetting measures to preserve pristine land and vegetation that will "act as physical barriers" (2025, pp. 9-116) to air contaminant dispersion.

			spatial boundaries for the assessment of effects on the air environment.	
52	Draft EA/IS Section 09 Atmospheric Environment and Section 04 Project Description and Appendix J: Noise and Vibration Technical Report	Draft EA/IS Section 9.3.3 Change in Sound Levels Section 9.5 Characterization of Effects Section 4.4.2 Construction Phase Activity Appendix J Section 13.2 Construction Noise - General Construction Activities	Appendix J assumes that road construction will progress at 100m per day. With the road being 107km long this would dictate a construction timeline of 3 years. Currently the Project is predicting 5 to 6 years of construction meaning construction will progress at a rate of approximately 50m or 60m each day, doubling the noise exposure timeline. Additionally, with a 1.5km radius as the exposure boundary this indicates that point receptor could experience noise for approximately 1 month, not the predicted one week. This estimate is not applicable to bridge construction, which is wholly different from the basic road construction expected progress of 50-60m daily. Receptors at bridges will experience noise for an extended period. Additionally, the NSA's were identified based on Indigenous rights and interests including traditional land uses (for a select portion of the representative local Indigenous communities–Nibinamik excluded). As such, to conclude that no additional considerations beyond best management practices are warranted may result in rights impacts. Traditional land uses are typically seasonal in nature and the further exclusion of timing criteria from the net effects assessment ignores the values or purposes of NSAs.	It is recommended the net effects assessment consider the timing of effects as this is an important criterion for traditional land use and understanding noise impacts. For all NSAs it is recommended that a construction schedule is developed collaboratively with the land users to avoid periods of land use, as well as a notification process to advise other potential land users of the location and timing of noise activities. This includes helicopter fly paths and blasting noise with consideration for wildlife movement patterns and avoiding noise disruptions to wildlife that has the potential to affect NSA's and traditional land use in general. While Nibinamik agrees with the mitigation in place, the complaint and investigation process should include that the issues can be brought directly to the construction contractor or operation and maintenance contractor. This process must include accountability for communicating resolutions or changes in general noise management practices to ensure rights are appropriately addressed. This is especially important as there is no proposed mitigation beyond best practices, and it is unclear that the assessment includes all potential noise sources (see comment 53).
53	Appendix J Noise and Vibration Technical Report	Section 7.2.2 Assumed Noise Sources and Section 2.3	Construction camps are considered as receptors but can also be sources of noise. It is not clear that the noise sources extend to camp operations.	Noise from camps such as generators and helicopter transportation should be considered to ensure the assessment accurately predicts effects and impacts.

	and Appendix H GHG Emissions Technical Report	Identification of GHG emissions Sources	Nibinamik members have already expressed concern about helicopters scaring off moose from mining exploration. WSR construction will be using helicopters to support the movement of personnel and supplies to construction camps before road access is available. However, the use of helicopters was not considered in the noise assessment. This impacts Nibinamik's rights to hunting.	Noise from helicopters should be considered and mitigated. Flight paths should avoid areas used for hunting, and account for wildlife movement and patterns/use areas, to avoid sensitive periods.
54	Draft EA/IS Section 09 Atmospheric Environment	Section 9.4.3 Mitigation Measures - Noise and Vibration	As discussed above, vegetation is noted as barrier to air emission dispersion–the same is true for noise. While operational noise is expected to be limited this does not detract from the potential ability to address long-term noise and air quality through the same mitigation of vegetation management, especially adjacent to gravel surfaces and quarries. Other consideration for long-term mitigations are absent. Nibinamik has already experienced disruptions to traditional land use from industrial noise. This Project would introduce additional noise, both directly and indirectly, by facilitating further industrial development in the region. To meaningfully address the long-term effects on rights, it is essential that all Projects contributing to regional development in this sensitive landscape adopt enhanced mitigation measures to limit cumulative noise impacts. Given that the Regional Impact Assessment may not be completed prior to decision making on this EA/IS, it is particularly important to identify potential long-term mitigation strategies now, or at minimum commit to implementing any additional measures	It is recommended that noise mitigations encompassed in the Draft EA/IS include design considerations, and that a component of the design consideration includes: • Trees to provide noise buffering capacity. Where there are no trees along the edge of the ROW, appropriate species should be selected and planted in sufficient density to support the establishment of long-term sound barriers for NSAs. • Where fill placement will support buffering receptors from noise impacts, the use of engineered terrain must be considered as part of the design. It is acknowledged that the cut fill balance has not been determined, and the movement of material has additional environmental impacts, this solution must be weighed against other potential impacts and should form a component of consultation through the design phase for joint decision making.

			that may be recommended through the Regional Assessment.	

55	Draft EA/IS Section 09 Atmospheric Environment	Section 9.5.2.2.1 Change in GHG during construction phase,
		Section 9.5.2.2.3 Effects of the Project on Canada's Carbon Footprint and Carbon Sinks,
		Section 9.7 Cumulative Effects
		Section 9.4.2 GHGs
		and
		Section 9.5.2.2.2 Change in GHGs During Operation Phase
			Nibinamik members raised concerns about how climate change is already impacting their lives, including increased wildfire risk, unreliable winter roads, and reduced safe access to the land. While the Draft EA/IS acknowledges global climate trends and the fact that the Projects' contribution to GHG emission is the result of creating access to the Ring of Fire, it fails to assess cumulative GHG effects from foreseeable linked developments – and there will be growth-inducing effects (see Section 2.16). This gap limits understanding of how the Project may worsen climate risks and undermine First Nations land access, mobility, and cultural continuity.
			Furthermore, based on the inadequate cumulative effects assessment and general conclusion that GHG impacts are not significant there are no climate-specific mitigations.
			A more thorough assessment is needed to address these rights-based impacts. GHG specific mitigations are required to meaningfully address project impacts.
			This includes consideration that the MSF will be powered by a diesel generator set representing 35% of the GHG emissions during operations yet there are no mitigation measures or considerations to replace these generators for another power source.
				The GHG cumulative effects assessment should include emissions from foreseeable regional projects like additional roads, mining, and forestry. While climate change is global, reducing GHGs also benefits local air quality. The Draft EA/IS lacks adequate cumulative assessment and project-specific GHG mitigation, which conflicts with rights-based impact considerations and IAAC guidelines. Nibinamik recommends deferring WSR decisions until:
				• A Cumulative Effects Assessment of GHG is complete, expanding the Project's GHG scope to include lifecycle emissions (account for camps operations and long-term aggregate operation), and
				• There are Project-specific mitigations incorporating:
				  • Low-carbon procurement strategies (such as low-carbon road materials)
				  • Low-maintenance designs (durable material and design standards that reduce the need for road repair)
				  • Vegetation management to promote roadside carbon sequestration (preferencing carbon sequestering plants over riprap).
				  • Renewable energy to replace reliance on diesel generators at the MSF and quarry sites.

56	Appendix H-Assessment of GHG Emissions	Section 3.1.7 Biomass Clearing	Living biomass (peatlands, vegetation) along the ROW, temporary workspaces and permanent maintenance areas will be	Aside from properly addressing this reasonably foreseeable future impact, which is recommended in 55 above, there could be

		Section 3.1.7.1 Living Biomass	removed or covered during construction, this will effectively remove carbon sinks, lowing carbon sequestration capacity for the region. This aspect of the project is acknowledged to be the most significant source of GHG emissions and it likely to be repeated when additional linear infrastructure (power and communications) is installed to support the mining industry and growth-effect in Webequie. An important future consideration for addressing climate change and regional GHG emissions is electrification. And another potential opportunity within the corridor is communication infrastructure.	practical considerations to reduce cumulative effects. Knowing that the disruption of biomass is a significant contribution the Project should be seeking to reduce the potential future impact from other linear projects by integrating– through simultaneous operations - any other connectivity at the same time as road construction to reduce future foreseeable GHG emissions. A benefit of which would be the reduction of operational GHG impacts from power requirements at the MSF and quarries.
57	Draft EA/IS Section 09 Assessment of Effects on the Atmospheric Environment	Section 9.5.2.2.3 Section 9.7 Cumulative Effects	The Draft EA/IS compared the project emissions with provincial and national emissions leading to the conclusion that the Project will not have significant GHG emissions. It is a broad total which dilutes the consideration of significance and potential impacts.	It is recommended that the significance of the project is not evaluated in such a way that it inherently results in a favourable outcome, negating a cumulative effects assessment. A better comparison would be to evaluate the current project scope: • With consideration for foreseeable project including the development of the Ring of Fire (see Section 2.16) • Against what emissions would be if a low-carbon design and project scope was implemented (A number of best practices and lower-carbon construction and operation alternatives are presented here as examples). • Against IPPC Net-Zero Roadmap benchmarks for infrastructure compatibility with 1.5°C/2°C scenarios.
58	Draft EA/IS Section 09 Assessment of Effects on the Atmospheric Environment	n/a	The Project is designed to enable mining and related development of the Ring of Fire area, and the potential atmospheric effects of this development are not fully characterized. Nibinamik highlighted that the community is already experiencing the	Nibinamik reiterates the above recommendation to reevaluate the significance determination and cumulative effects from this Project, which must also consider the acid rain generating capacity from the potential Ring of Fire mine developments.

			impacts from acid rain related to regional development . Mining is a common contributor to this phenomenon and is excluded from the Draft EA/IS atmospheric impacts.	

FISH AND FISH HABITAT

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
59	Draft EA/IS Section 4 Project Description	Section 4.6 Management Plans	The descriptive framework for developing the CEMPs and OEMPs are conspicuously missing any mention of collaboration with First Nations communities, or inclusion of First Nations as reportees for any reporting/documentation.	Nibinamik asserts that First Nations communities must be included in development of the plans and therein must also receive any monitoring reporting to ensure adequate oversight.
60	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.1.5.1 Spatial Boundaries	Proponent has defined LSA as a buffer (1 km / 500 m) around the preferred. Nibinamik is concerned that this ignores how impacts are imparted in aquatic systems - water will convey impacts beyond imaginary boundaries.	Nibinamik requests that the Fish & Fish Habitat LSA should be based on downstream watershed or waterbody boundaries.
61	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.1.6 Table 10-5 Project Interactions with Fish and Fish Habitat VC and Potential Effects	Nibinamik is extremely concerned about the implications of increased access bringing higher fishing and hunting pressure to their territory. Therefore all project components that have the potential to facilitate access must be appropriately assessed.	Nibinamik requests that "*Vegetation clearing and grubbing*" and "*Construction and use of supportive infrastructure*" be included in the assessment for 'Change in Public Access to Fish/Fish Habitat'.
62	Draft EA/IS Section 10 Assessment of Effects on Fish	Section 10.1.6 Table 10-5 Project Interactions with Fish and	The breadth of impacts is not fully considered within the Draft EA/IS and missing essential conditions results in both gaps in the assessment and development of mitigation.	'Emissions, Discharges and Wastes' should have a checkmark for "Alteration, Disruption and/or Destruction/Loss of instream habitat" (chemical/vibration/discharge) AND "change in

	and Fish Habitat	Fish Habitat VC and Potential Effects		access" (i.e., creates barrier to fish passage) for both the construction and operation phases. Road runoff drainage (operation discharge), especially at bridges, has the ability to impact fish and fish habitat. Appropriate mitigations to prevent road runoff from directly entering fish and fish habitat must be established.
63	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.2.1 Existing Conditions: Methods	Nibinamik understands that field surveys specifically targeted crossings due to increased likelihood of potential effects to Fish & Fish Habitat. However, the preferred route (as shown in Figure 10.1) appears to run adjacent to a number of waterbodies. Nibinamik is concerned about the high likelihood that clearing/grubbing will impact the riparian area of these waterbodies, but they were not characterized during existing conditions studies.	Nibinamik requests that, at minimum, a few representative sites be chosen to characterize the small waterbodies that are likely to have their riparian areas impacted by vegetation grubbing/clearing. This information should then be brought forward into the effects assessment for the construction phase.
64	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.2.1.2.1 Fish Habitat and Fish Community Surveys	The Proponent states: "*the assessed waterbodies are presented in Figure 10.3*" however it is unclear based on Figure 10.3 whether fish community was sampled in lakes adjacent to the proposed route that did not have a crossing.	Please clarify whether these adjacent lakes were samples for fish community. If not, please provide robust justification for their omission.
65	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.2.1.2.2 Spawning Surveys	Proponent claims spring spawning surveys were conducted to determine "*…the extent of spawning habitat…*" yet only 3 locations were surveyed. Walley and Lake Sturgeon are both highly valuable species to Nibinamik, and ensuring their protection is a key concern for community members.	Please complete more robust spawning surveys to ensure accuracy of the characterizations (see also Comments 69, 96, below). Please explain how surveying 10% of the crossings is sufficient for determining the extent of spawning habitat / use in the LSA.

66	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.2.1.2.4 Environmental DNA (eDNA) Sampling	The Proponent collected eDNA from nine locations, four of which were already sampled by other methods. eDNA is an effective low-cost tool for evaluating fish species presence. Nibinamik is concerned that it was under-utilized and that characterizations do not accurately represent the fish community along the Project route.	Please justify not using eDNA surveys tool to evaluate fish presence at all locations, especially given the Proponent recognized that sampling methodology was poor for Brook Trout and Lake Sturgeon. Lake Sturgeon are a key values species for Nibinamik and it is essential that presence and distribution are accurately characterized.
67	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.2.1.3 species at risk	The Proponent did not encounter Lake Sturgeon during field surveys, and has all but excluded them from this assessment (see Comment 98, below). Sturgeon are seasonally migratory and difficult to capture, thus conventional sampling programs may be ineffective - as noted above by the proponent. Lake Sturgeon are a key species for Nibinamik members. Nibinamik is concerned that very little effort was taken to characterize their presence.	Recognizing the implications of impacts to SAR (and cultural importance of Lake Sturgeon), please explain why so little effort was made to characterize Lake Sturgeon presence and use. This is especially true for known areas of sturgeon presence (e.g., Muketei River, Winisk Lake, Winiskisis Channel). Nibinamik notes that for these areas, presence must be assumed and all potential downstream effects avoided or mitigated.
68	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.2.2 Table 10-7 Waterbody Fish Presence and Restricted Activity Timing Windows	Nibinamik notes that 16 sites were not sampled at all for fish presence.	Please justify not sampling these locations, especially with the ease and cost-effectiveness of eDNA.
69	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.2.2.1.2 Spawning Surveys	The Proponent notes that eggs were not recovered during spawning surveys, and suggested that conditions were unsuitable, and "the populations may have declined" as explanations for this failure.	Please explain why suitable conditions were not sought (i.e., field survey timing and method adjustments) to ensure walleye (at minimum) spawning was sufficiently evaluated. Please revisit the Lake Sturgeon characterization with more robust and appropriate methods, and revise the effects assessment to sufficiently

			Further, the statement "the populations may have declined" as explanation for not recovering Lake Sturgeon eggs is unacceptable to Nibinamik. Community members are extremely concerned about the cumulative effects of development across their territory, and a statement that suggests a population does not need to be included in the effects assessment *due to its existing decline* is completely unacceptable.	recognize Lake Sturgeon and include an appropriate characterization of cumulative effects.
70	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.3.1.1 Destruction/ Loss of Fish Habitat	Proponent states 9,150 m^2 of habitat destruction, based on crossing and road dimensions, but later reduces the estimate to <10% of this value (687.5 m^2), appearing to claim bridge footings represent the only possible loss of fish habitat. Later in the section, the Proponent notes an additional 750 m^2 of spawning habitat will be lost across 6 crossing locations. Then the Proponent notes that 27,640 m^2 of flooded riparian area will be cleared & grubbed, and is suitable for northern pike spawning when wetted. Given that northern pike are spring spawners, the likelihood of this riparian habitat being wetted and used for spawning is extremely high and should therefore be included in the loss calculations. The fact that the proponent has only claimed 687.5 m^2 of expected aquatic habitat destruction, and has not accounted for any of the other impacts (over 30,000 m^2), even below in section 10.3.1.2 when discussing harmful alteration, is extremely concerning.	Nibinamik requests a full revision of the effects assessment to appropriately recognize the potential impacts to fish habitat. At minimum this must include the 9,150 m^2 of combined crossing dimensions, and the 27,640 m^2 of potential northern pike spawning habitat that will be lost.

			A road project over 100 km long, with 30 watercourse crossings, even if all culverts were open-bottom, will have a substantially greater impact on fish habitat than simply the 687.5m^2 of direct loss due to bridge footings as claimed by the Proponent.	
71	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.3.1.3 Changes in Fish Access to Habitats	Nibinamik is concerned about potential impacts to fish due to unsuitable culverts representing barriers or unusable habitat.	There is ample evidence that open-bottom culverts are the best way to reduce impacts to fish and fish habitat if culverts must be constructed. The use of any other type of culvert for permanent crossings is not acceptable to Nibinamik.
72	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.3.2.2 Changes in Public Access to Fish/ Fish Habitat	The Proponent states: "*This potential effect could be amplified where other proposed roads in the region...are constructed...*" Cumulative effects, especially due to increased access and traffic, are a primary concern to Nibinamik members.	Nibinamik requests that this characterization be changed to recognize that the effect **will** be amplified as other roads are constructed, and this fact must be appropriately accounted within the effects assessment.
73	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.3.2.2 Changes in Public Access to Fish/ Fish Habitat	The Proponent appears to ignore the impact of facilitating increased road density; rather, limiting the potential for increased harvest to the footprint and LSA. Construction of the WSR will provide a starting point for spur roads (legal and illegal) which will push the impacts of increased harvest well beyond the footprint of the project. This increased access and harvest pressure is a primary concern to Nibinamik members.	The inevitable impact of increased harvest beyond the footprint and LSA must be appropriately recognized and accounted for in this assessment.
74	Draft EA/IS Section 10 Assessment of Effects on Fish	Section 10.4 Mitigation and Enhancement Measures	Nibinamik acknowledges that an Environment Committee has been proposed to facilitate communication	Nibinamik requests that the Environment Committee include Nibinamik members.

	and Fish Habitat		and oversight during construction and operation.	
75	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.4.1.1.1 General Avoidance Measures and Project Planning	The Proponent notes that "*Channel realignments/infilling will only be undertaken in locations where specific conditions are met and/or where required…*" Channel realignment/infilling is a significant fish habitat impact.	Channel realignments and infilling must be avoided. Given that the proponent has neglected to include potential realignments/infilling in this effects assessment (i.e., area calculations in 10.3.1.1), any realignment or infilling must be accompanied by significant offsetting (>2:1 ratio) and must involve First Nations in the decision-making process. If the Proponent deems a realignment necessary, First Nations (including Nibinamik) must be involved in discussions and planning from the very beginning, prior to the permitting process and any mandated consultation.
76	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.4.1.2.1 Temporary Water course Crossings	Nibinamik is concerned that MNR guidelines for water crossings are out-of-date (25 years old).	Please ensure that best management practices also align with newer guidance (e.g., Section 8 of Ministry of Natural Resources and Fisheries and Oceans Canada protocol for the review and approval of forestry water crossings, originally published in 2020 and updated in 2024). Additionally, temporary water crossing design should be done in collaboration with First Nations, to ensure that post-construction rehabilitation is aligned with and respecting Rights, Title, and interests.
77	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.4.1.2.2 Project Planning and Design	The Proponent states "*During the construction phase, Environmental Monitor(s) and/or Indigenous Monitor(s) will be on-site...*" Nibinamik notes that all construction monitoring **must** include First Nations participation. It is unacceptable for environmental oversight to be conducted solely by non-Indigenous Environmental Monitor(s).	Please revise this section to recognize that Indigenous Monitors must be part of the environmental monitoring crew during construction.
78	Draft EA/IS Section 10	Section 10.4.1.2.4	While Nibinamik supports natural revegetation following grading and	Please confirm that measures will be put in place to prevent revegetation by invasive species and

	Assessment of Effects on Fish and Fish Habitat	Storage and Handling of Material	stabilizing activities in cleared areas, community members are concerned about (1) invasive species, and (2) facilitating increased access.	prevent road users from disturbing sites or using them to access other areas.
79	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.4.1.2.7 Dewatering Activities	The Proponent notes that turbidity and total suspended solids will be monitored according to permit requirements. Nibinamik is concerned that permit requirements will not be sufficiently protective, especially where sensitive habitats (e.g. spawning) are potentially impacted.	Nibinamik requests turbidity and total suspended solids monitoring be developed in collaboration with First Nations to ensure better-than-best management practices are used.
80	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.2.1.1 Table 10-14: Criteria Results for Destruction of Fish Habitat - Construction	The Proponent considers magnitude to be "low", noting "*...very small [area] in relation to the available fish habitat...*" However, fish habitat within the LSA is not continuous - fish populations impacted by the destruction of habitat due to the project may not be able to simply relocate to habitat available elsewhere. The impacts of this pathway will be realized on a site-by-site basis, thus should be considered on a site-by-site basis.	Nibinamik requests the magnitude be increased to high.
81	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.2.1.1 Table 10-14: Criteria Results for Destruction of Fish Habitat - Construction	Similar to the above comment, impacts are realized on a site-by-site basis and therefore must be assessed as such. habitat that exists elsewhere cannot contribute to the resilience of impacted habitat at each specific site.	Please provide thorough, site-by-site, data-backed justification for judging the impacted fish habitat to be "resilient" to disturbance.
82	Draft EA/IS Section 10 Assessment of Effects on Fish	Section 10.5.2.1.1 Table 10-14: Criteria Results for Destruction of	The Proponent claims that destruction of fish habitat "*....is reversible if the roadway was removed.*" Nibinamik asserts that the Proponent is well-aware the roadway will not ever be	Nibinamik asserts that reversibility **must** be considered "irreversible".

	and Fish Habitat	Fish Habitat - Construction	removed, and instead will be used for decades into the future to facilitate resource extraction in the Ring of Fire, as well as likely other development. these impacts will affect generations of fish.	
83	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.2.1.1 Table 10-14: Criteria Results for Destruction of Fish Habitat - Operation	As in the above comment, the destruction is not reversible, given that the roadway will not be removed once it is built.	Nibinamik asserts that reversibility **must** be considered "irreversible".
84	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.2.1.2 Harmful Alteration and Disruption of Fish Habitat	The introduction of invasive species, both terrestrial and aquatic, is a key concern for Nibinamik members. The proponent has committed to preparing a plan for managing invasive vegetation during construction, but not aquatic invasives. Further, without a completed plan for review, Nibinamik has no way to verify its efficacy. The proponent is simply assuming that their invasive vegetation management plan will be 100% successful.	Nibinamik requests a much more conservative approach, recognizing that this area is pristine and at high risk of invasives. Thorough, best-in-industry prevention measures will be more effective than any monitoring and eradication plan.
85	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.2.1.2 Harmful Alteration and Disruption of Fish Habitat	The Proponent claims "*harmful alteration and disruption of fish habitat is not expected as a result of roadway operations*", noting "*effects are likely only to occur during roadway maintenance*" (Table 10-17). Nibinamik asserts that roadway operation will be a constant long-term source of impacts that will result in the harmful alteration or disruption of fish habitat. For example: • Invasive species introduction, due to increased vehicle traffic and	Nibinamik requests that Proponent revise this assessment to include likely impacts to fish habitat during roadway operations.

			human access from other areas of Ontario and beyond. • Increased human access will result in increased pressure on the ecosystems from recreational and guided users - which will result in harmful alteration or disruption of fish habitat.	
86	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.2.1.3 Fish Access to Habitats: Operations	Regarding clogged culverts, the Proponent notes "*...a monitoring and maintenance program will reduce the duration of the effect*".	Nibinamik requests that opportunities be provided to Nibinamik members to participate in the monitoring and maintenance program, in the event of Project approval.
87	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.2.2.1 Injury/Death of Fish	Nibinamik is concerned that the raw number of (potential) fish injuries or mortalities is being used as a metric to help assess the magnitude of this impact, which disregards important context. Mortality of a small number culturally significant and/or SAR fish, especially for long-lived large-bodied species like Lake Sturgeon, will have much larger population-level effects than mortality of a small number of forage minnow species. Similarly, the mortality associated with electrofishing may be "*minor*" in abundant and ubiquitous species, but sampling-based mortality and injury for culturally significant and/or SAR fish is not “minor”.	Nibinamik requests that fish injury/mortality impacts be evaluated on a species-specific and site-by-site basis, to ensure that mitigation and monitoring measures are appropriately rigorous to protect important and/or sensitive species.
88	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.2.2.2 Changes in Public Access to Fish Habitats: Operations	Nibinamik community members have expressed significant concerns regarding the expansion of recreational access into their territory that would be facilitated by the WSR, especially upon completion of the other Ring of Fire roads. Community members have	Please revise the assessment to recognize the significant increase in non-local, non-Indigenous fishing traffic that will accompany the Project over the long-term.

			already noticed resource use by external guiding outfits, and road access will only bring more off this pressure. While the immediate short-term impacts of the Project may be overall minimal and driven primarily by Webequie members and other First Nations, the fact is that this road will connect to a public road network and the long-term impacts of that will be a significant increase in fishing traffic.	
89	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.5.3 Table 10-24 Summary of Predicted Net Effects on Fish and Fish Habitat VC (and elsewhere)	Nibinamik is concerned that the effects of invasive species during construction and operation have been downplayed and/or mischaracterized. The entire assessment relies on 100% successful mitigation - despite no aquatic invasive species management plan being developed. • magnitude could be high depending on species, so should be at least moderate in the assessment; • impacts would be long-term if invasive species get established; • frequency is continuous if invasive species get established; • invasive species are known to significantly alter ecosystems - the local pristine ecosystems will not be resilient if invasives are established; and • even if the road is removed, once invasive species are established there is a very low likelihood their effects can be reversed.	Nibinamik requests a full revision of the effects assessment.
90	Draft EA/IS Section 10 Assessment of Effects on Fish	Section 10.6.1 Methodology	Nibinamik has significant concerns regarding the methodology for determining significance. The ranking impact criteria appear to be derived	Please specifically explain how Indigenous Knowledge and guidance from First Nations was used to determine the scale ranking scores.

	and Fish Habitat		from a western perspective to downplay real and potential impacts of the project, which risks mischaracterizing the Project effects and creating poorly designed monitoring and mitigation. Further, the additive nature of the scoring does not accurately represent the consequences of the impacts. For example, effects occurring during sensitive spawning windows are **not** only "1 point" more impactful than effects occurring outside of sensitive spawning windows.	Nibinamik demands a full revision of this scoring system, with meaningful input from First Nations, including Nibinamik, to ensure an accurate characterization of effects and sufficiently designed monitoring and mitigation.
91	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.6 Table 10-25 Scores Assigned for Key Criteria (Categories) of the Predicted Net Effects	The Proponent's decision making regarding scoring is unclear and likely inaccurate.	Please explain why "magnitude" has two scores of zero.
92	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.6.1 Determination of Significance: Methodology	Nibinamik notes that the highest possible score, based on the Proponents rankings and additive calculation method, is 15. Thus, the most significant impact possible to fish and fish habitat from the project (i.e., scoring the maximum value for every criterion) would only receive a significance of "moderate" - which the Proponent has also classified as "not significant".	This alone should fully invalidate the effects assessment. Nibinamik demands a fulsome revision of the entire assessment, including revised, more accurate rankings (see comment 90, above), and a more conservative approach to classification of significance.
93	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.7 Cumulative Effects	The Proponent limits the cumulative effects assessment to only "probable/certain" and "moderate/high". This allows them to minimize the number of impacts brought forward into the cumulative effects assessment.	As above, Nibinamik demands a full revision of the effects assessment–which includes a more adequate cumulative effects assessment. This revised cumulative effects assessment must include all Project effects that are considered

			The proponent states "*Net effects with this characterization are most likely to interact with other RFD] and activities*". This creates substantial risks of mischaracterizing cumulative effects by ignoring contributing impacts that may be characterized as "low" magnitude in isolation, but result in a disproportionately high impact (especially to sensitive species or SAR) in combination with other stressors.	"possible" or above, and a magnitude of "low" or greater.
94	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.10 Follow-up and Monitoring	Nibinamik acknowledges the invitation for development and implementation of monitoring programs.	Please elaborate how the road operator will ensure further mitigation measures are enacted if unacceptable effects are observed.
95	Draft EA/IS Section 10 Assessment of Effects on Fish and Fish Habitat	Section 10.10 Follow-up and Monitoring	The Proponent notes monitoring of potential impacts to fish and fish habitat will be limited to in-stream construction or active water taking/discharge. Nibinamik is concerned that this plan ignores the potential effects from activities adjacent to water.	Nibinamik asserts that monitoring for effects to fish and fish habitat must occur for any activities adjacent to watercourses and water bodies, rather than only in-stream work.
96	Draft EA/IS Section 13 Assessment of Effects on Species at Risk	Section 13.2.1.3.4	Nibinamik is concerned that the timing of Proponent surveys was not effective for characterizing Lake Sturgeon (or Walleye) spawning in the LSA, which creates substantial risk to this SAR. According to the Natural Environment Existing Conditions (Appendix F, 8.2.2.3.3), spawning surveys were conducted in June. Nibinamik recognizes that sturgeon spawning habitat is rare in the LSA. However, the appropriate timing for Lake Sturgeon spawning surveys would	Nibinamik requests new spawning surveys be conducted at appropriate times (i.e., throughout May) at all sites to ensure the effects characterization is accurate.

			be during the month of May, rather than June. Similarly, Walleye spawning is likely to occur earlier in spring compared to the survey timing.	
97	Draft EA/IS Section 13 Assessment of Effects on Species at Risk	Section 13.2.1.3.5	Nibinamik is concerned that eDNA sampling timing (Aug 17-20) and effort (9 sites) was not nearly rigorous enough to sufficiently evaluate Lake Sturgeon presence or use in the LSA. Lake sturgeon are highly migratory, especially during spawning period when they move up smaller tributaries. eDNA sampling at the majority of crossings during May would produce much more reliable results for Lake Sturgeon presence/use, as they are migrating/spawning during this time.	Nibinamik requests that new eDNA surveys at all watercourse crossings be conducted during the updated spawning surveys (see comment 96, above) throughout May.
98	Draft EA/IS Section 13 Assessment of Effects on Species at Risk	Section 13.3.12.1	The Proponent states "*Only a portion of these watercourses and waterbodies have the potential to support Lake Sturgeon based on their habitat characteristics*" Nibinamik is concerned that this ignores potential use by Lake Sturgeon as migratory corridors for spawning. This compounds, the already poor fish presence and spawning evaluations that the Proponent had conducted. Nibinamik asserts all of the crossings in the LSA must be considered potentially impacting Lake Sturgeon.	Given that Lake Sturgeon may utilize LSA watercourses for migration, potential impacted habitat must equal that of all crossings, at minimum, rather than simply bridge footings. Please also refer to comment 70, above.
99	Draft EA/IS Section 13 Assessment of Effects on Species at Risk	Section 13.3.12.1.3	The Proponent states "*Since bridges are planned at all watercourses and waterbodies where Lake Sturgeon are expected to be present, there are no expected operational effects on Lake Sturgeon passage*" Nibinamik reiterates concerns that culverts may impact Lake Sturgeon	Please either: (1) assume that any watercourse or waterbody connected to known Lake Sturgeon habitat contains Lake Sturgeon for the purposes of this assessment, or

			migration. Nibinamik also re-asserts that the Proponent has not sufficiently characterized Lake Sturgeon presence or use within the LSA, and had utilized baseline studies that were not relevant to determining Lake Sturgeon use or presence. Thus, Nibinamik is also concerned that the Proponent's understanding of Lake Sturgeon ecology is insufficient to make predictions regarding which watercourses and waterbodies are "expected" to have Lake Sturgeon present.	(2) complete revised eDNA sampling at all crossings during multiple seasons to confirm Lake Sturgeon presence/absence.
100	Draft EA/IS Appendix E– Mitigation Measures	Appendix E Section 2	The Proponent states "*Webequie First Nation, or the proponent for construction and operations for the project, will develop a Sustainability Plan which will be an integral part of the CEMP and OEMP...*" Nibinamik is extremely concerned that Webequie First Nation may only be the Project proponent for this initial regulatory phase, and that the critical environmental management plans will be developed by an entirely different entity, with little or no integration of Indigenous voices.	Please confirm: • How Webequie First Nation will be involved in determining the criteria, metrics, and thresholds for the CEMP and OEMP to ensure that Indigenous values are truly embedded within the project, and involvement is not superficial or tokenistic. • How decision making by other First Nations, including Nibinamik, will be integrated into the development of the Sustainability Plan, CEMPs, and OEMPs (to the same effect as inquired above).
101	Draft EA/IS Appendix E– Mitigation Measures	Appendix E Section 5.6	In item 2, the Proponent states that "*Whenever possible, in-water works shall be scheduled...when [watercourses are] seasonally dry or frozen to the bottom.*" Nibinamik is concerned that limited seasonal visits during existing conditions data collection have created uncertainty regarding the wetted or frozen status of watercourses in the LSA.	Please describe the contingency mitigations planned in the event that a watercourse is not dry or frozen, as predicted, during the work window.

102	Draft EA/IS Appendix E– Mitigation Measures	Appendix E Section 5.6	In item 3, the Proponent notes the *Ontario Restricted Activity Timing Windows for the Protection of Fish and Fish Habitat* will be used to establish times when no instream works are allowed.	Given that fish will use habitats for both spawning and migration to spawning grounds, Nibinamik requests that the most conservative window possible that encompasses Walleye and Lake Sturgeon (both very important species) be used to ensure critical migration periods are protected. Based on the "spring" table in *Ontario Restricted Activity Timing Windows for the Protection of Fish and Fish Habitat*, this conservative window is April 1 to July 15.
103	Draft EA/IS Appendix E– Mitigation Measures	Appendix E Section 5.7	Nibinamik is concerned about potential bed instability and habitat impacts from Temporary watercourse crossings.	Nibinamik requests that fords not be permitted, and that all temporary crossings be in the form of temporary spans to avoid infilling, grading, or excavation.
104	Draft EA/IS Appendix E– Mitigation Measures	Appendix E Section 5.8	Nibinamik is concerned about the planned rigour of downstream monitoring during watercourse diversions.	Nibinamik requests that all temporary watercourse diversions include rigorous downstream turbidity monitoring to ensure cofferdams and other sediment control measures are functioning as expected. Nibinamik also requests that opportunity (including training) be provided for Nibinamik community members to participate in this monitoring.
105	Draft EA/IS Appendix E– Mitigation Measures	Appendix E Section 5.22	The Proponent has stated water quality monitoring will occur when working in or near fish-bearing watercourses, or when required by permit. However, this appears to ignore the potential downstream transmission of impacts from "non fish-bearing" watercourses. Nibinamik is also concerned that watercourses may be judged non fish-bearing based on inadequate data (see comments above).	Nibinamik requests that water quality monitoring occur when working in or near all watercourses.
106	Draft EA/IS Appendix E–	Appendix E Section 5.22	Nibinamik is concerned that impacts to fish due to changes in water quality may	Nibinamik requests explicit minimum water quality monitoring regularity to include:

	Mitigation Measures		be missed if monitoring is not sufficiently rigorous. This area is pristine and water quality is a key concern for Nibinamik members.	• continuous temperature, pH, conductivity, dissolved oxygen monitoring downstream and upstream using dataloggers or similar; • hourly spot measurements during in-water work for turbidity, pH, temperature, conductivity, dissolved oxygen to ensure quick action if necessary as well as calibrate and verify continuous logger data; and • at least four (4) daily spot measurements during work near water.
107	Draft EA/IS Appendix E– Mitigation Measures	Appendix E Section 5.22	Nibinamik is concerned that First Nations are not included in the water quality monitoring or planning process.	Nibinamik requests the following adjustments: The Contractor shall be responsible for: • Preparing a Water Quality Management Plan for work requiring, or that may require water quality monitoring and submitting the Plan to Nibinamik and other First Nations for review prior to MECP and/or MNR prior to the start of the contract. The Plan shall include a description of the works and measures proposed to mitigate adverse changes to water quality developed in collaboration with local First Nations. • Contracting with a qualified professional to conduct water quality monitoring activities unless otherwise directed by MECP in writing. And Enabling Nibinamik to either participate in the monitoring as assistants or training Nibinamik members to act as a QP. • Conducting water quality monitoring prior to, during, and after construction activities. • Reporting exceedances immediately to MECP and local First Nations. • Ceasing work if exceedances occur and employing corrective actions to mitigate exceedances prior to restarting work. • Notifying MECP and local First Nations immediately when the water quality monitoring plan is not being adhered to.

				• Submitting water quality monitoring reports prepared by a qualified professional to MECP and local First Nations.
108	Draft EA/IS Appendix F– Natural Environment Existing Conditions	Appendix F Section 8.2.2.2	Nibinamik is concerned that the Proponent has used outdated and/or inaccurate data to characterize thermal regimes, which risks mischaracterizing the potential impacts of the Project and/or climate change on aquatic species through temperature changes.	Please explain why outdated information was used for thermal regimes. Nibinamik requests sites be re-classified with relevant guidance from Ontario. We suggest [*Jones, N. and B. Schmidt. 2019. Thermal habitat: Understanding stream temperature and thermal classifications. Ontario Ministry of Natural Resources and Forestry, Science and Research Branch, Peterborough, ON. Science and Research Information Report IR-18. 13 p.*]: • Cold water <17.5 °C, cold transition 17.5–19.5 °C, warm transition 19.5–21.0 °C, and warm >21.0 °C • These should be based on average July temperature data.
109	Draft EA/IS Appendix F– Natural Environment Existing Conditions	Appendix F Section 8.2.2.2	Assume that "Cold" designated waterbodies should read <19°C rather than <9°C.	Please revise.

VEGETATION AND WETLANDS

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/RECOMMENDATION
110	Draft EA/IS Appendix F: Natural Environment Existing Conditions	Section 9.2.2.1 Baseline Characterization	Appendix F indicates that the Ontario Parks Inventory and Monitoring Program Guidelines (OPIAM) (Draft, Ver. 1.4, 2012) were used to collect data at wetland and vegetation survey locations. However, the methodology lacks transparency, as it does not specify what measurements or assessments were actually completed to	The Wetland Function Assessment should include site-specific hydrogeologic investigations across all wetland types within the RSA to accurately characterize recharge and discharge functions. At minimum, a transparent description of field methods, data coverage, and

			evaluate wetland hydrology and hydrogeology within the LSA or RSA. Section 9.2.6 *Wetland Function Assessment* further notes that geophysical functional indices were derived primarily from published studies and spatial analyses, with only limited field data collected for groundwater recharge and discharge. These data do not extend across the Wetland RSA and do not account for all wetland types identified, leaving significant gaps in representation. Groundwater recharge and discharge are inherently site-specific processes. Hansen (2005) highlights that groundwater recharge is "variable and difficult to quantify, depending on basin shape, location within the watershed, substrate, local groundwater gradients, etc." Assigning values to wetland recharge and discharge without site-specific investigation is therefore scientifically unsound and risks misrepresenting actual wetland function within the assessment area.	limitations must be provided to support the validity of the functional ratings.
111	Draft EA/IS Appendix F: Natural Environment Existing Conditions	Section 9.4.2 Wetland Function Assessment	The Appendix F applies Tier 1 Landscape-Level Assessments. Hansen (2005) describes these as tools that "consider the broader landscape (e.g., sub-shed, watershed, country or province) [to] help identify the *relative* importance of wetland function within the landscape." However, the scope of this assessment is constrained to the RSA, which does not align with ecologically meaningful landscape boundaries or a broader landscape (e.g., sub-shed or watershed). Instead, it is restricted to a 5-km or 500-m buffer. The RSA is defined as the	A landscape-level assessment should be conducted using ecologically relevant boundaries, such as sub-watersheds or entire watersheds. This would allow wetland functions to be assessed within the full hydrologic and ecological systems that they are a part of. The Draft EA/IS should provide clear justification for limiting the assessment to the RSA and explain how this method reliably characterizes wetland function and net effects. The potential impact to wetland function within the broader context of watershed function further supports the need for a watershed health value component and the need for more coordinated watershed monitoring and

			"geographical extent to which potential effects from the Project may be expected." This means the assessment is estimating the relative importance of wetland functions only within an area already assumed to experience effects, rather than in the context of the broader watershed. As such, there is risk of underestimating effects, since wetlands are being evaluated only against other potentially impacted wetlands, rather than against their functional role within the broader watershed.	stewardship initiatives, as discussed in the surface water section.
112	Draft EA/IS Appendix F: Natural Environment Existing Conditions	Section 9.4.2 Wetland Function Assessment	The Draft EA/IS applies a semi-quantitative assessment (e.g., ordinal values) to estimate the probability that a given wetland type provides specific geophysical functions. It is stated that this method is considered adequate to determine the general function of wetlands for the purpose of conducting the alternatives analysis and developing a determination of the net effects of the preferred route. However, no justification is provided from literature, regional assessments, or guidance to support this claim. Nibinamik is concerned that this approach lacks the rigour needed to identify impacts to sensitive local wetlands or broader regional wetland/peatland complexes. While the Proponent acknowledges that a comprehensive hydrologic, groundwater, nutrient cycling, and carbon monitoring program will be needed after construction, post-construction monitoring cannot substitute for a robust assessment of net effects at this stage.	The Draft EA/IS should provide greater justification to support that the applied approach is adequate to determine net effects on wetland function (e.g., published studies, past assessments, guidance, etc.). Justification should demonstrate that this high-level assessment has been successful in determining net effects and implementing mitigations. Nibinamik prefers that a full assessment of wetland function is completed, where effects to wetland function are assessed at the site-specific and watershed level. Nibinamik requests that impacts to wetland function are considered highly uncertain at this time, and require a more robust assessment to demonstrate the scope and significance of net effects.

113	Draft EA/IS Appendix F: Natural Environment Existing Conditions	Section 9.4.11 Calculation of Accumulated Functional Values	There are concerns that the approach to the functional wetland assessment may underestimate impacts. Aggregating functional values across different wetland function groups (e.g., hydrologic, vegetation, wildlife) may dilute or obscure critical signals for specific functions, potentially limiting the ability to identify and mitigate significant impacts. Furthermore, the assessment does not explain how changes to wetland function post-construction were determined, creating uncertainty around potential effects and the adequacy of proposed mitigation measures.	The Draft EA/IS should provide a transparent methodology that evaluates each wetland function individually and clearly demonstrates how post-construction changes were estimated. This would improve confidence in identifying impacts and designing effective mitigation measures.
114	SECTION 11: Assessment of Effects on Vegetation and Wetlands	Section 11.3.2.1.3 Vegetation Community Fragmentation	The reported 0.8% direct and indirect loss of vegetation and wetlands within the RSA AtkinsRéalis, 2025) does not account for the true impact to vegetation from this road. This novel linear feature, especially in conjunction with the Northern Road Link and nearby mining operations (AtkinsRéalis, 2025), will create emergent cumulative effects that will impact local ecological communities to an unknown, but likely significant, extent. The mechanisms for these vegetation and wetland impacts are as follows: • invasive species; • edge effects; • increased dust (described in Geology, Terrain & Soils Section); and • increased anthropogenic access.	Nibinamik recommends an expanded description of “Moderate” and “High” vegetation and wetland impacts to encompass at least a 150 m buffer around the entire project footprint.
115	SECTION 11: Assessment of Effects on Vegetation and Wetlands	n/a	Invasive species exert a cost of between $13-$34 billion dollars per year on Canadian industries. And, this is, by definition, an underestimate as no dollar-value is assigned for subsistence harvesting, culturally significant plants	Nibinamik requests to be involved in the development and implementation of a comprehensive and adaptive Invasive Species Mitigation Plan. Invasive species management must not involve the use of herbicides or other

			and animals, or ecosystem services. Roads are known vectors for their proliferation, therefore, the proposed WSR comes with a major risk of spreading invasive species.	chemical treatments with the potential to have knock-on adverse environmental impacts.
116	SECTION 11: Assessment of Effects on Vegetation and Wetlands	11.9 Determination of Significance	Disturbance tolerant and invasive plant species are known to thrive along roads and other anthropogenic linear features, and in some cases, this impact has been observed extending as far as 150 m away from the road edge. Therefore, a 150 m wide corridor extending beyond the edge of the road may experience (moderate to high) impacts from shifts in vegetation community composition and diversity.	There must be an acknowledgement in the Vegetation & Wetland assessment of significance section: shifts in vegetation and wetland communities should be assessed as "Significant", due to the extensive edge effects and invasive species proliferation expected and described above.
117	SECTION 11: Assessment of Effects on Vegetation and Wetlands	n/a	Because plant medicines are not assigned economic value, they are not taken into account when examining the impact of invasive species. Habitat fragmentation would alter vegetation communities along the WSR, with ecological effects to extensive adjacent areas (such as changes in plant species composition, road avoidance by large wildlife, pollinator & seed disperser impacts etc.). The ecological changes to road-adjacent areas may impact distribution and abundance of plant medicines in currently unforeseen ways.	Nibinamik requests consultation, oversight, participation in decision making and involvement in monitoring of vegetation communities and wetlands during all project phases.
118	Section 11: Assessment of Effects on Vegetation and Wetlands And Section 21 Cumulative Effects Assessment	Section 11.3.6 Effects Summary Table 11-40: Potential Effects, Pathways, and Indicators for the Vegetation and Wetlands VC and	Airborne dust and runoff contaminants such as silts, sands and salt, will have a direct negative impact on plant medicine quality near the WSR. RFDs will also have an impact on vegetation heath through the use of herbicides, pesticides, or other chemical treatments. Impacts to the health of vegetation, especially country foods, may affect Nibinamik members' health.	Nibinamik requests consultation, oversight, participation in decision making and involvement in monitoring of vegetation communities and wetlands during all project phases. A country food monitoring program to verify the presence and absence of contamination must be developed and implemented in collaboration with Nibinamik.

Section 21.4.6.5 Assessment of Significance

WILDLIFE AND WILDLIFE HABITAT

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
119	Section 12: Assessment of Effects on Wildlife and Wildlife Habitat	n/a	The health of wildlife may be impacted through direct contact and/or through their food by products used in the Project (e.g., dust and herbicides). The Project also enables RFDs which will have an influence on wildlife health through the use of herbicides, pesticides, and other chemical treatments.	Nibinamik not only requests that this Project refrain from the application of chemicals that may affect wildlife health, but it is essential that the health of wildlife is monitored. Nibinamik reiterates the request that a country foods monitoring program is established to verify the health of wildlife and potential risks to Nibinamik members from the consumption of country foods.
120	Section 12: Assessment of Effects on Wildlife and Wildlife Habitat	Section 12.2.1 Existing Conditions: Methods	For the majority of potential SWH types along the proposed WSR, no field investigations were completed. The risk of losing discrete and significant features such as mineral licks, perennial den sites, or hibernacula remains an unknown and unmitigated impact. SWH was developed based on guidance documents.	Additional ground truthing for potential high-valued SWH sites (including caribou nursery sites, hibernacula, mineral licks, den sites etc.) should be completed. Also, the Draft EA/IS should specify that these impacts are unknown and pose a high risk for various VCs within the LSA/RSA. Furthermore, well-considered adaptive management and mitigation plans should be created in order to reduce impacts to SWH features, should they be discovered.
121	Section 12: Assessment of Effects on Wildlife and Wildlife Habitat	Section 12.3 Identification of Potential Effects, Pathways and Indicators	Section 12.3.2.1 on Habitat Alteration or Degradation should address other influential effects pathways including fragmentation, which may differentially impact species in distinct ways – this is noted throughout the remainder of Section 12.3.	The Proponent must establish a long-term monitoring and adaptive management plan that includes: • measurable mitigation targets; • mechanisms to limit harvesting and access along the road; • ongoing monitoring;

			Roads are known to create substantial habitat fragmentation effects within wilderness areas. The proposed physical roadway, its traffic, and alterations to vegetation communities would all serve as barriers to wildlife movement. While a road may not entirely prevent wildlife from crossing, fragmentation increases the cost of movement and disrupts wildlife through a combination of mechanisms.	• seasonal shut-downs to facilitate wildlife movement; • invasive species monitoring and management. Further, the Proponent must ensure that wildlife corridors and passages are included in the design of the road. Nibinamik requests to be engaged on these.
122	Appendix F: Natural Environment Exiting Conditions Report	Section 10.3.1.7.4 Bat Maternity Roost Habitat	Information presented in the Draft EA/IS is lacking with respect to bat habitat use within the LSA/RSA, which creates a risk that impacts to bats would be higher than those acknowledged. Incidental surveys for bat hibernacula (aerial surveys at 100 km/h at 100 m altitude) are not sufficient to comment on the presence/absence of these features: as acknowledged in the Draft EA/IS.	Ground truthing of the highest likelihood potential hibernacula sites should be conducted during a seasonally appropriate timeframe (swarming/pre-overwintering) including the use of active and passive ultrasound acoustic detectors.
123	Appendix F: Natural Environment Exiting Conditions Report	Section 10.3.1.7.4 Bat Maternity Roost Habitat	The Draft EA/IS currently states that no bat maternity roosts were confirmed during field surveys–however no suitable surveys were conducted to examine for bat maternity roost sites. Impacts to bat maternity roosts are unknown and are an unmitigated risk of the proposed WSR.	Please revise 10.3.1.7.4 to state that "no bat maternity roost field surveys were completed."
124	Section 12: Assessment of Effects on Wildlife and Wildlife Habitat	Section 12.8.1 Table 12-244 Key Criteria and Scores for Determining the Significance of the Predicted Net Adverse Effects on Moose	The assessment that, net adverse effects on the Moose is considered not significant, is not substantiated. Especially within the RSA, the cumulative effects of multiple novel roads and mines will certainly cause increased moose mortality due to interactions with hunters, vehicles, and predators.	In light of the myriad impacts to this complex, and culturally important species, we assert that the proposed impacts to moose in the LSA and RSA should be determined as "High" magnitude and the cumulative effects as "Significant."
125	Section 13: Assessment of	Section 13.3.3 Identification of	The proposed WSR would create a large, novel, ongoing habitat fragmentation	Nibinamik requests the following:

	Effects on Species at Risk	Potential Effects, Pathways and Indicators; Caribou And Section 13.5 Characterization of Net Effects	impact within the Missisa herd range, a partial fragmentation of the Ozhiski herd and would also exert an impact on eastern migratory caribou of the Southern Hudson Bay herd. Furthermore, it would set the stage for major future cumulative effects to these herds from developments associated with the road (including forestry and mining impacts). Data collection suggests the Project will intersect to highly suitable habitat for calving and winter areas.	• consultation, oversight, decision making and involvement in the development and implementation of caribou impact mitigation planning; • provision of a memorandum report on the caribou that was killed during the collaring program; and • road mitigation planning to include seasonal shut-downs when caribou migration or calving is present near the proposed road.
126	Section 12: Assessment of Effects on Wildlife and Wildlife Habitat And Section 13 Assessment of Effects on Species at Risk	n/a	New roads create major opportunities to access natural resources, and thus pose the risk of increased harvesting and hunting pressure in the region. The completion of the WSR would immediately expose timber, wildlife, plants, fungi, and minerals to increased harvesting levels and greatly enhance the risk of over-exploitation. Public access is only restricted during construction.	Nibinamik requests the following: • consultation, oversight, decision making and involvement in new commercial hunting and fishing operations in the region; • consultation, oversight, decision making and involvement in access permissions along the proposed road; and • consultation, oversight, decision making and involvement in permitting forestry and mining operations and developments. Consultation, oversight, decision making and involvement in the development of detailed Monitoring Plans for the road's construction and operation including records and analysis of hunting and harvesting in the region.
127	Section 12: Assessment of Effects on Wildlife and Wildlife Habitat	Section 12.3.8 Identification of Potential Effects, Pathways and Indicators: Waterfowl and Section 12.7.8 Predicted Net Effects: Waterfowl	The Draft EA/IS states that cumulative effects to forest and wetland birds will be moderate but "Not Significant." However, there is potential for substantial and unmitigated impacts to these VCs. The boreal forest currently serves as a critical nursery ground for over 300 species, and produces billions of juvenile birds every year.	All novel road proponents in this region, including the WSR, should collaborate on a boreal bird conservation plan. This plan should incorporate known best practices such as refugia, stepping stones and corridors, as well as supporting research into region specific best practices for conserving this major population of North American breeding birds.

SOCIAL ENVIRONMENT

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
128	SECTION 14: Assessment of Effects on Social Environment	Section 1.0 Scope of the Assessment	The baseline and assessment of effects on the Social Environment is based on First Nations in the LSA available CCPs, Community-Based Land Use Plan (CBLUP) and IKLRU studies. However, only Webequie and two other First Nations have these documents and studies available, meaning the data to determine baseline and effects on Social Environment is incomplete. Completing CCPs, CBLUP and IKLRU takes time, capacity and funding.	Nibinamik requests that the proponent provides capacity and funding to support a Nibinamik -specific IKLRU study. The results of the IKLRU and assessment based on the results must be completed prior to any decision is made on the WSR project.
129	Appendix N: Community Readiness Plan	Section 7.1.1.1 Childcare and Youth Services Drop-In Centre	The CRP proposed childcare centres in Webequie to support Webequie community members who will participate in training or employment opportunities related to the project. Though this initiative is positive, there must also be an option for childcare for community members from outside Indigenous communities to benefit from to ensure equal access to employment across genders and communities.	To ensure equal opportunities to training and employment, there must be childcare and youth services available to members of other Indigenous communities who will follow training programs or will work on the WSR.
130	SECTION 14: Assessment of Effects on Social Environment	Table 14-4: Social Environment VCs –Indicators and Rationale	One of the VCs identified is Community Well-Being (CWB). One of the indicators that is of concern to Nibinamik related to CWB is the potential increased access to and consumption of drugs and alcohol, which is not mentioned as an indicator here.	As drug and alcohol consumption is a concern for many communities, and the Project, by increasing accessibility to the area, has the potential to increase the access to these substances. Therefore, we request that increased access to these substances be listed

				as an indicator and be part of the assessment of effects on Social Environment.
131	SECTION 14: Assessment of Effects on Social Environment	Table 14-5: Project Interactions with Social Environment VCs and Potential Effects	Only 9 of the 19 Project activities during the construction and operation phases are listed as interacting with the Community Well-Being Valued Component. However, all of the activities listed will have impacts on community well-being and safety, as CWB is intrinsically linked to the environment and to the ability to practice traditional land use and harvesting activities, as well as the exercise of rights. Therefore, vegetation clearing, construction of culverts and bridges, etc. will have impacts on wildlife and wildlife/fish habitat, and therefore on CWB. Mobilization of equipment will also impact community safety and well-being, since any increase of people from elsewhere jeopardizes their security/puts them at greater risks.	All of the listed activities must be indicated as having interactions with community well-being and safety.
132	SECTION 14: Assessment of Effects on Social Environment	Section 14.2.1.2 Collection and Analysis of Baseline Information	Census data was used as one of the sources for data collection and analysis of baseline conditions for Social Environment. However, Census data is rarely accurate when it comes to First Nations data collection, for many reasons including aggregation of small communities into larger district, inconsistent participation of community members, lack of meaningful engagement with communities, and lack of cultural relevancy of the surveys (Leach, 2025).	Census data must be used cautiously, and must be complimented/supplemented with Indigenous/Community-led socio-economic studies. Again, capacity and funding must be available to support communities in completing these.

133	SECTION 14: Assessment of Effects on Social Environment	Section 14.2.1.2 Collection and Analysis of Baseline Information	Only Webequie First Nation participated in the Focus Group and Knowledge Holder interviews, and only members from Webequie, Weenusk and Marten Falls First Nations participated in the community surveys (though all 22 Indigenous communities were invited to participate). This indicates a potential lack of engagement from leadership-leadership or nation-nation, which is often more meaningful than engagement from a project team or consultant.	Moving forward, creating opportunities for leadership-to-leadership discussions and engagement is important to ensure meaningful and proper engagement of affected First Nations.
134	SECTION 14: Assessment of Effects on Social Environment	Section 14.2.2 Results	The results of the social baseline study indicate that English is the primary language spoken in 74% of households in Indigenous communities in the LSA. This number is likely inaccurate for many communities.	Socio-economic data must be updated based on community-led studies and information for accuracy.
135	SECTION 14: Assessment of Effects on Social Environment	Section 14.3.4 Change to Education, Training, and Traditional Learning	It is mentioned that the Project may have positive effects on employment, training and business contracting opportunities.	We agree with this statement, however the training and employment opportunities must be specific to each community's needs and realities, and must extend to Nibinamik, as a signatory of Treaty 9.
136	SECTION 14: Assessment of Effects on Social Environment	Section 14.3.4 Change to Education, Training, and Traditional Learning	Due to lack of availability of education and training programming and facility space in communities, it is likely community members will have to leave their community to get training and employment related to the WSR. This is understandable, however the impacts that this could have on social cohesion and practice of traditional activities as well as the passing	Ensure there is an assessment of the impacts of community members leaving their community for education and training related to the WSR on social cohesion and community well-being.

			down of culture, knowledge and language must be assessed here.	
137	SECTION 14: Assessment of Effects on Social Environment	Section 14.3.4 Change to Education, Training, and Traditional Learning	The statement that "The Project will not have a direct impact on the community well-being and safety within the other LSA communities" and that this effect is negligible is not accurate.	This Project inserts itself in the cumulative development in Northern Ontario around the Ring of Fire - Nibinamik is concerned about the cumulative impacts of this development specifically on CWB (community safety and health - drug use and drug and alcohol consumption in the community) and believes there will be direct impacts of the WSR on Community Well-Being. This must be reflected and assessed accurately in the Final EA/IS.
138	SECTION 14: Assessment of Effects on Social Environment	Section 14.4.1 Change to Population and Demographics	The WSR Working Group will only be composed of Webequie First Nation Chief and Council, Elders and representatives., meaning that the Community Readiness Plan will mostly focus on mitigating effects and maximizing benefits for Webequie First Nation. There will be impacts and benefits for First Nations in the LSA, and therefore, they should be represented on the Working Group to ensure their voices are heard and they have a say in decision making.	Representatives of other FN in the LSA should be invited to participate in the Working Group.
139	SECTION 14: Assessment of Effects on Social Environment	Section 14.4 Mitigation and Enhancement Measures	Many of the mitigation and enhancement measures are focused or intended only for Webequie First Nation. As Nibinamik and other First Nations in the LSA will also be directly impacted by the WSR, they should not be excluded of these measures.	Nibinamik-specific mitigation and enhancement measures must be developed with Nibinamik First Nation, based on the results of community engagement and IKLRU studies, as well as community concerns.

140	SECTION 14: Assessment of Effects on Social Environment	Section 14.7 Cumulative Effects	Cumulative effects assessment for the Social Environment VCs are focused on Webequie First Nation. There is no assessment for the cumulative effects of the WSR Project on other First Nations in the LSA.	The cumulative effects assessment needs to integrate other communities in the LSA, including Nibinamik, as the entire region will be subjected to the cumulative effects of road development and mining/other development in the foreseeable future. Roads could facilitate other development or activities such as tourism, outfitting, forestry, hydro, etc., all of which could have negative impacts on Nibinamik CWB and their Treaty and Aboriginal rights.
141	SECTION 21: Cumulative Effects Assessment	Section 21.4.9.3 Social Environment: Mitigation for Cumulative Effects	Since the Cumulative Effects Assessment (CEA) focuses on the cumulative effects of RDFs on Webequie First Nation, the mitigation measures are geared toward minimizing impacts and enhancing benefits to Webequie First Nation There are no mitigation measures specific to the social impacts of the WSR on Nibinamik First Nation.	As previously mentioned, a CEA for impacts on the Social Environment is necessary for not only WFN, but all other surrounding FN, including Nibinamik. Mitigation and enhancement measures for cumulative effects on Nibinamik will need to be developed and implemented based on the result of this study.
142	Appendix N: Community Readiness Plan	Section 6.0 Plan Inputs	The CRP focuses on the priorities identified in Webequie First Nation's CCP. Therefore, priorities of other First Nations impacted by the WSR Project do not seem to be reflected in the CRP.	The CRP should extend to the priorities of surrounding First Nations, including Nibinamik. Funding should be provided by the Proponent for Nibinamik to develop its own CRP and participate in the development of an Emergency Response Plan for the WSR Project.
143	Appendix N: Community Readiness Plan	Section 7.2.1 Education, Training and Employment Readiness Strategy	The Training and Employment Strategy seems to be geared toward the needs of Webequie First Nation, while all surrounding First Nations, including Nibinamik, should be considered in this strategy.	Ensure equal access for Nibinamik community members to training and employment opportunities. This includes a Training and Employment Plan that considers the cultural and social reality and specificities of Nibinamik.

ECONOMIC ENVIRONMENT

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/RECOMMENDATION
144	Draft EA/IS Section 15 Economic Environment	Table 15-2 Regional and Local Economy VC–Summary of Input Received During Engagement and Consultation And Section 15.4.4 Mitigation and Enhancement Measures–Public and Indigenous Finances	The Project is intended to be an economic driver, both for the regional mineral development and community of Webequie. As an economic engine for the Treaty Territory, and Nibinamik as a signatory of the Treaty, it is imperative that the economic benefits extend to Nibinamik (in response to Treaty Rights for economic benefit from development within the Treaty territory). Mitigations and accommodation specific to the economic environment rights are missing from the results and deficient in the Aboriginal and Treaty Rights assessment section (see Section 2.14). This Project is deigned to align with Webequie First Nation self-determined goals and community priorities, but this is not clear for Nibinamik. Because this project is a cost to the province there are no mitigations or enhancements proposed in relation to Indigenous finances. Previous discussions throughout the Draft EA/IS highlight the economic and socio-economic challenges experienced with the LSA. Significant investment into the Webequie community ($60 million) is brought forward as a suggestion to enabling the Nation fully capture the economic benefits of the WSR. The same work to understand investment needs for other LSA First Nations has not been completed, including Nibinamik. There is also a lack of Project recommendations in how government	The economic environment assessment address generic benefits and impacts and is recommended to better encompass Rights consideration as this forms part of the legal and constitutional context. Beyond a separate ARTI Section, a discussion of how the Project will fulfill the constitutional and Treaty economic obligations is warranted as part of the Economic Environment. This should include revenue sharing to ensure that Nations benefit economically for development of the Treaty and can better enable their ability to capture the benefit of development (WSR and regional). An improved engagement process is required to understand how this Project, and its objective for Ring of Fire development, relate to Nibinamik's self-determination goals, traditional economies, and community priorities. Additional Community plans and inputs are necessary for Nibinamik rights to be considered, and this may include an assessment of the Nations Readiness to participate in the WSR and other regional development.

			profits and benefit s should remain within the LSA.	
145	Draft EA/IS Section 15 Economic Environment	Section 15.2.2.1 Labour Force Employment and Income Section 15.2.1.5 Summary of Data Sources Section 15.3.1 and 15.3.2	The assessment acknowledges that reliance on census data as the primary input does not adequately capture the traditional economy and may either under- or over-represent existing conditions, thereby limiting the accuracy of projected economic impacts. Socio-economic conditions within the LSA are identified as key factors influencing employment barriers and labour force participation, with a significant disparity in income and employment already present across communities. The assessment forecasts that the majority of employment opportunities will be directed to members of Webequie First Nation, with a smaller proportion available to other LSA communities, including Nibinamik First Nation. As noted, "due to the limited presence of supply chain industries in the LSA, relatively few indirect effects will be captured by the other LSA communities" (AtkinsRéalis, 2025, pp. 15-114). Given that Webequie First Nation is the Project proponent, it is expected that the Nation will hold a direct role and accountability in achieving project outcomes. Importantly, the assessment does not propose mitigation measures to address existing challenges in local employment and income conditions but instead frames these measures as "Project enhancements." Without binding commitments, the socio-economic issues documented in the existing conditions baseline can reasonably be expected to persist or worsen as a result of the Project. The characterization of these	These knowledge gaps, wage and employment disparities can be address by community-specific studies and planning to ensure the LSA to prepared to participate in the Project as well as the regional development that may come from the Ring of fire Access. Nibinamik recommends capacity to undertake economic development planning for the community. Including Nibinamik-specific outcomes in project planning is essential to address the limited supply chain. This must be paired with direct engagement • Between Nibinamik and Webequie leadership to address employment and labour force participation as part of this Project as well as adaptive management for follow-up accountability. • Between Nibinamik and the WPT along with commitments for future relationship building with the construction contractor and adaptive management for follow-up accountability. • Between Nibinamik and the Ontario and Federal government to ensure the appropriate support systems are in place to improve Nibinamik members capacity to capture future employment opportunities. Training and career development must be beyond Project-specific opportunities but is necessary now to prepare for the long-term regional development. Project-specific mitigations to improve employment and income outcomes must include:

			measures as enhancements does not provide the level of certainty required; they must be framed and implemented as formal mitigations to ensure adverse impacts are addressed.	• seasonal and flexible work opportunities to accommodate cultural practices (traditional land use and ceremony); • wage equity between employees from the LSA, RSA and beyond; • mitigative training and strict workplace policies against discrimination and harassment; • zero tolerance policy for drugs and alcohol at all work and camp sites; • inclusion of ceremonial or cultural practices in construction plans monitoring programs with specific targets and metrics on employment and income within the LSA; and • commitments for adaptive management and contingency measures if employment objectives are not met.
146	Draft EA/IS Section 15 Economic Environment	Section 15.5.1 Potential Effect Pathways Not Carried Through for Further Assessment And Section 15.2 Existing Conditions	Traditional economies are considered within the Draft EA/IS, however little data was available or provided. It is recognized that the traditional Indigenous economy is a component of Aboriginal and Treaty Rights. Many traditional economies are considered to be directly related to other disciplines of assessment (fish, wildlife, vegetation) all of which are included herein and highlight potential long-term impacts affecting Nibinamik rights. This Project is deigned to facilitate further long-term regional impacts as well as economic benefit and employment, for this reason, consideration of the cumulative effects on Rights impacts and traditional economies is warranted. The majority of data assessed is based on census, which admittedly excludes traditional economies. Employment rates are	Short-term impacts may be centralized around the lack of individual opportunities to participate in traditional economies (as a result of employment), and therefore cultural transmission. However, the impacts become cumulative with long-term potential for degradation of cultural preservation/transmission and the environmental conditions necessary for traditional economies. Mining and resource extraction have a tendency to operate on a boom-and-bust cycle, which poses intermittent positive and negative economic impacts within the LSA and RSA. This cycle emphasizes the importance of the traditional economy. Further data on traditional economy participation and the conditions to sustain this Aboriginal Rights is required to develop effective mitigations. This is recommended

			notably lower in the LSA than the rest of Ontario, the importance of traditional economies may be entirely underrepresented and in the absence of a cumulative effects assessment, the impacts (short and long-term) overlooked.	to form part of the future cumulative effects assessment on the Rights of Indigenous Peoples (AtkinsRéalis, 2025, p. 21.4.12). As noted in Section 2.1, this assessment should be validated by Nibinamik.
147	Draft EA/IS Section 15 Economic Environment	Section 15.4.3 Mitigation and Enhancement Measures– Business Environment	The assessment does not propose mitigation measures to address existing challenges in the business environment, but instead frames these measures as "Project enhancements" and include: • robust procurement policies to involve Indigenous-owned businesses and strategies to support Indigenous hiring; • set-asides for Indigenous business are noted as tentative due to the limited capacity of Webequie and uncertainty of capacity within the LSA; and • scalable contracts and training to promotes skill development and sustainable business growth. Without binding commitments, the issues documented in the existing conditions baseline of the Draft EA/IS can reasonably be expected to persist or worsen as a result of the Project.	The characterization of these measures as enhancements does not provide the level of certainty required; they must be framed and implemented as formal mitigations to ensure potential adverse impacts are addressed. Mitigation as noted under Comment 145 above are applicable here as well. Additional measures should include: • Indigenous-prioritized bidding processes; • simplified and streamlined procurement processes for Indigenous business with procurement support processes (such as guidance to navigate the procurement process); • nation-direct engagement with Nibinamik to discuss opportunities and maintenance of the business relationship; and • track, measure and report economic outcomes; require institutional commitment from senior project leadership to ensure economic goals are prioritized and achieved in collaboration with Webequie First Nation.

NON-TRADITIONAL LAND AND RESOURCE USE

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
148	SECTION 16: Assessment of Effects on Non-Traditional Land and Resource Use	Table 16-5: Project Interactions with Land and Resource Use (non-Indigenous) VCs and Potential Effects	The Project interactions table does not identify 'Change to Land Use Compatibility and Stewardship' as a potential effect of the construction of structures at waterbody crossings.	The construction of waterbody crossings will change the land and the way waterbodies and the land are used, and therefore it will have impacts on Land Stewardship, and should be assessed as such.
149	SECTION 16: Assessment of Effects on Non-Traditional Land and Resource Use	16.2.2.1.7 Federal Regional Assessment in the Ring of Fire Area	The RA of the Ring of Fire is necessary to assess the cumulative impacts of development in the area, however, as previously stated, no decision about the Project should be made until the RA is complete.	Ensure the RA is complete before making any decision about the WSR Project.
150	SECTION 16: Assessment of Effects on Non-Traditional Land and Resource Use	16.2.2.2 Land Use Planning and Stewardship	This section highlights Nibinamik (and other First Nations) land use planning and background information. As previously stated, Nibinamik does not yet have a CBLUP, and the information cited is likely outdated as it cites a 2014 study.	Nibinamik would like the opportunity to review the information provided, as well as opportunity to provide community-led information and land use planning for consideration in the assessment.
151	SECTION 16: Assessment of Effects on Non-Traditional Land and Resource Use	16.2.2.3.2 Regional Study Area - Trapping	Again, the trapping data is based on Statistics Canada Census data and is likely an underrepresentation of trapping in First Nations in the RSA. The Draft EA/IS reports that there are 0 people whose occupation is trapper or hunter.	Nibinamik requests that this data is updated based on Community-led data gathering.
152	SECTION 16: Assessment of Effects on Non-Traditional Land and	16.3.3.1.8 Road Use (Operations Phase) - Change in Access to Traditional Territory -	The effect of the operations of the WSR Project (road use) is considered to be negligible on the potential increase of tourism activities or users in the region. Rather, increase in tourism and users (outfitters, hunting, trapping, fishing,	The effect of the operations of the WSR Project (road use) on the potential increase of tourism activities or users in the region should be considered as moderate or high, and should be carried forward for further assessment and cumulative effects assessment, and mitigation

	Resource Use	Potential Increase in Number of Tourism Activities or Users	gathering, etc.) is a significant concern for Nibinamik, and increased access to the region will likely increase these activities, and thus the effect should not be considered negligible.	measures should be implemented to minimize these impacts.
153	SECTION 16: Assessment of Effects on Non-Traditional Land and Resource Use	16.3.3.1.9 and 16.3.3.2.3 Road Use (Operations Phase) - Change in Access to Traditional Territory - Potential Increase in Number of Tourism Activities or Users -Potential Decrease in Availability of Wildlife Resources and Fish Resources	Similarly, the road use is likely to decrease availability of wildlife and fish resources as it will increase access to hunting and other harvesting activities in the area. Though WSR road use does not provide a transportation connection to hunting or fishing sites (as stated in the Draft EA/IS), it does provide easier access to these areas that are currently difficult to access. This is especially true during the winter months when the winter roads are open, as there is a winter road that connects Webequie to Nibinamik. This effect is therefore not negligible and must not be assessed as such.	The effect of the operations of the Project (road use) on the potential decrease in the availability of wildlife and fish resources should be considered as moderate or high, and should be carried forward for further assessment and cumulative effects assessment, and mitigation measures should be implemented to minimize these impacts.
154	SECTION 16: Assessment of Effects on Non-Traditional Land and Resource Use	Table 16-47: Summary of Potential Effects, Mitigation Measures and Predicted Net Effects for Non-Traditional Land and Resource Use VCs	To mitigate and minimize the potential increase in mining claims, the Draft EA/IS proposed to use provisions from the *Mining Act*. With the implementation of this mitigation, the Draft EA/IS predicts there will be no net effect on commercial and industrial use in the area. However, it is important to consider other legislation that may have an impact on the potential increase in mining activity and claims in the region of the Ring of Fire, particularly the newly passed Bill C5 at the federal level, and Bill 5 at the provincial level.	Though we understand Bill 5 and Bill C5 were not passed at the time of the release of the Draft EA/IS, they must be considered in the Final EA/IS. The Draft EA/IS must take into consideration these new pieces of legislation, and the impacts they will have on development in the region.

HUMAN HEALTH

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
155	Section 17: Assessment of Effects on Human Health	Table 17-3: Human Health VC–Determinants of Health, Indicators, and Rationale	The indicator for the Determinant called "Colonialism and trauma of residential schools" indicates the temporary disruption in traditional practices on the land. Though this determinant and indicator is critical to the effects assessment, the disruption of traditional practices of Indigenous Peoples in Canada was not temporary and isolated in time, but rather ongoing and a consequence of many colonial practices and laws, including the *Indian Act*.	Temporary should be replaced with ongoing disruption of traditional practices, to accurately reflect the ongoing challenges that many First Nations, including Nibinamik, still face related to practicing traditional activities such as harvesting.
156	Section 17: Assessment of Effects on Human Health	Table 17-4: Human Health VC–Project Interactions with Determinants of Health	"Racism and social exclusion" is only determined to interact with human health during the construction phase, and not during the operation phase. Though the external workers will no longer be on site, the WSR will increase access of external people to the region, whether for recreational or tourism activities, or mining activities in the Ring of Fire. It is therefore safe to assume that there is potential for an increase in racism and social exclusion during the operation phase of the project.	The impacts of racism and social exclusion must be assessed not only during the construction phase, but also during the operation phase.
157	Section 17: Assessment of Effects on Human Health	17.2 Existing Conditions–Baseline Community Health Profile	The baseline community health profile is only established for Webequie First Nation (other than certain generalizations that are made from existing literature), despite the fact that surrounding First Nations, including Nibinamik, are within the LSA and there will be direct impacts on their health and well-being. Without a baseline for health and well-being of Nibinamik, it is not possible to adequately assess the effects of the WSR on the community.	A Nibinamik-specific baseline study must be conducted for health and well-being to establish the existing conditions and identify, assess and mitigate the impacts of the WSR on Nibinamik. This Proponent must provide capacity and funding for this study.

158	Section 17: Assessment of Effects on Human Health	17.3 Identification of Potential Effects, Pathways and Indicators	Similarly, the identification of potential effects of the WSR on Human Health is primarily focused on the potential impacts on Webequie First Nation and does not provide an assessment for the surrounding First Nation.	The identification of potential effects of the WSR must be done for Nibinamik specifically, based on the results of the baseline study.
159	Section 17: Assessment of Effects on Human Health	17.4 Mitigation and Enhancement Measures	The Community Readiness Plan and Community Readiness Working Group will be implemented to ensure that community recommendations and enhancement measures are considered. However, this Working Group must reflect the input of all First Nations in the LSA, including Nibinamik, and ensure equal representation from all communities.	The Proponent must ensure equal representation of all First Nations in the LSA on the Community Readiness Working Group.
160	Section 17: Assessment of Effects on Human Health	Table 17-6: Summary of Potential Effects, Mitigation Measures and Predicted Net Effects for Human Health VC	Mitigation measures for the "food security" determinant of health and the potential loss of access to traditional foods caused by the project is to identify traditional hunting areas and to minimize disturbance in these areas. While this measure will likely minimize the impacts on access to traditional foods and harvesting areas, the information is solely based on First Nations who have TKLUS or Community-based Land Use Plans. Therefore, at the moment, though we know that Nibinamik members travel to Webequie to practice traditional activities and to visit family members, there is no information on specific Nibinamik land use areas in the disturbance area of the Project.	A TKLUS must be conducted for Nibinamik, so mitigation measures can be applied to culturally important sites for Nibinamik First Nation.
161	Section 17: Assessment of Effects on Human Health	Table 17-6: Summary of Potential Effects, Mitigation Measures and Predicted Net Effects for Human Health VC	Another mitigation measure for loss of access to traditional foods is to ensure Webequie First Nation is involved in all land use planning activities. Having only WFN involved is not representative of all First Nations in the LSA and does not allow other impacted First Nations to be involved appropriately in the project.	First Nations in the LSA should be included in land use planning activities, and all other relevant monitoring or planning activities, including the Community Readiness Plan, the Community Liaison Committee, cultural sensitivity training, Community Health and Well-being survey, etc.

162	Section 17: Assessment of Effects on Human Health	17.5.1 Potential Effect Pathways Not Carried Through for Further Assessment	It is determined that the Project will have adverse effects on food security during the construction phase and positive effects on food security during the operations phase. Though the road will in fact increase access to the traditional territory for harvesting and subsistence hunting, fishing, trapping and gathering for community members, it will also increase access to these resources and areas for other people external to communities. This will have adverse effects on food security.	The adverse effects on food security (impacts on wildlife populations and health caused by increase in noise, dust, etc., increased access for people external to communities, etc.) during the construction phase must be assessed and mitigated and carried forward to the cumulative effects assessment.
163	Section 17: Assessment of Effects on Human Health	17.10 Follow-up and Monitoring	The Draft EA/IS invites First Nations to develop and implement monitoring programs, which will be helpful in ensuring that impacts are minimized and benefits are maximized on the surrounding First Nations. However, without adequate capacity and funding, it may be difficult for certain First Nations to develop and implement these monitoring programs.	The WPT must provide funding to Nibinamik to develop and implement a monitoring program to monitor the effects of the project on their rights and interests.
164	Section 17: Assessment of Effects on Human Health	17.10 Follow-up and Monitoring	Further, the follow-up and monitoring proposed is solely based on minimizing impacts and maximizing benefits (such as economic development and empowerment) on Webequie First Nation. This does not reflect the impacts that the Project will have on surrounding First Nations, including Nibinamik.	The WPT must provide funding and ensure that monitoring and follow-up programs are geared to impacts on not only WFN, but also surrounding FN, including Nibinamik.
165	SECTION 21: Cumulative Effects Assessment	Table 21-91: Net Effects for each Determinant of Health	Air quality, water quality and surface water quality have all been assessed to have impacts on Health, however the Draft EA/IS decided not to carry the assessment forward for these indicators in the cumulative effects assessment. No rationale is provided for this decision.	Nibinamik asks that the Draft EA/IS either provide rationale for why these determinants of health were not retained for a CEA or include them in the CEA.

ABORIGINAL AND TREATY RIGHTS AND INTERESTS

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
166	Section 19: Assessment of Effects on Indigenous Peoples and Impacts to the Exercise of Aboriginal and Treaty Rights	19.1.5.1 Spatial Boundaries	The spatial boundaries as described in section 19.1.5.1 describe the Project Footprint (disturbance area) as "35-metre wide right-of-way" and the LSA as encompassing surrounding First Nations, including Nibinamik. However, the map in Figure 19.3 shows the LSA as being a buffer around the preferred route and the RSA as a small region around the WSR, which does not encompass any other First Nations. These spatial boundaries do not align, and this information should be rectified.	For the purpose of the Indigenous Peoples and Aboriginal and Treaty Rights (IPATR), we believe the Project Footprint, LSA and RSA should be as qualitatively described in section 19.1.5.1, and not as shown on the map. The Proponent must also clearly indicate the spatial boundaries, both written and portrayed on a map.
167	Section 19: Assessment of Effects on Indigenous Peoples and Impacts to the Exercise of Aboriginal and Treaty Rights	19.2.2.2.6 Nibinamik First Nation	We appreciate that the Draft EA/IS mentions the limited available information on Nibinamik's cultural and traditional existing conditions and that the information will be incorporated into the next revision.	The WPT must ensure that sufficient time and funding is available for Nibinamik to complete these studies. The results of these studies must be used to identify culturally sensitive and significant areas, and to develop measures to avoid or minimize impacts in these areas.
168	Section 19: Assessment of Effects on Indigenous Peoples and Impacts to the Exercise of Aboriginal and Treaty Rights	Section 19.4.1.1.2 Timing/ Seasonality for Harvested Preferred Species	A suggested mitigation measure for overharvesting is to prohibit fishing for construction workers. However, there is no mention of restricting or prohibiting other harvesting practices (gathering, hunting and trapping) for construction workers.	We ask the WPT to indicate whether measures to restrict and/or prohibit all harvesting activities for construction workers will be implement, and if so, how they will be decided.

169	Section 19: Assessment of Effects on Indigenous Peoples and Impacts to the Exercise of Aboriginal and Treaty Rights	19.4.1.4 Exercise of Aboriginal and Treaty Rights with Current and Historical Use of Lands and Resources for Traditional Purposes	This section mentions the implementation of a Stewardship and Environmental Management Strategy (The Strategy).	Further information on the Strategy would be appreciated. Nibinamik would like to be involved in the development of this Strategy.

CULTURAL HERITAGE AND ARCHAEOLOGICAL RESOURCES

COMMENT #	Document Name	SECTION REFERENCE	ISSUE	QUESTION/ RECOMMENDATION
170	Draft EA/IS Appendix T: Stage 1 Archaeological Assessment Report	Section 2.3 Alternative Strategies for Special Survey Conditions: Test Pit Survey in Northern Ontario and on Canadian Shield Terrain and Section 3.0 Recommendations	A buffer of 50 m extending inland from known modern watercourses, waterbodies, and wetland areas demonstrates there are areas of high archaeological potential with the Study Area. The buffer for water as a feature of potential should be revised in line with best practices.	It is recommended that the potential model is revised to increase the buffer attributed to modern waterways to a minimum of 150 m.
171	Draft EA/IS Appendix T: Stage 1 Archaeological Assessment Report	Section 2.3, Section 2.4 Conclusions and Section 3.0 Recommendations	The attribution of low potential for the balance of the LSA due to presumed condition of vast wetlands does not align with the background research and past land use.	It is recommended that the balance of the LSA that was considered to have low archaeological potential is reevaluated.
172	Draft EA/IS Appendix T: Stage 1 Archaeological	Section 2.1 Alternatives for Potential	According to S & G Section 1.3.4, Stage 2 survey may be reduced in these areas due to the logistics of accessing these	It is recommended that the use of the exemption from S&Gs 1.3.4 is reconsidered. Site visits and the Stage 2

	Assessment Report	Evaluation in Special Conditions: Remote Areas and Section 3.0 Recommendations	remote locations, and their inherent low potential for archaeological materials. The use of an exemption that will eliminate any assessment without visual survey could put unknown archaeological resources at risk of destruction.	assessment can be completed in phases, aligned with the construction of road segments, to improve access to previously remote areas.

EFFECTS OF THE ENVIRONMENT ON THE PROJECT

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/RECOMMENDATION
173	Draft EA/IS Section Effects of Environment on Project and Appendix I: Climate Change Resilience Review Report	Draft EA/IS Section 24.2 Average Climate Trends and Appendix Section 5.2 Risk Level Assessment Section 5.3- Special Cases- Wildfires	Nibinamik members highlighted ongoing impacts of climate change including the change of fish species present or absent, (potentially related to hydrological change) and wildfire risk (to which the Project area is susceptible). The Draft EA/IS appropriately considers climate change impacts on Project infrastructure and proposes design measures to enhance resiliency. However, these considerations must also address community safety and ensure the road does not worsen environmental conditions—such as increasing wildfire risk—that would in turn heighten the very climate vulnerabilities the design seeks to mitigate. That said, the following concerns could be addressed as part of the design: Wildfire is one of the potential hazard, the road serves to address by way of: • providing access to fight wildfire; and • preventing wildfire movement by serving as a fire break. However, this must not overshadow the fact that road often act as a fire source (Bowring, Li, Mouillot, Rosan, & Ciais,	Access to address wildfire: The road itself will have the potential to act as a firebreak and emergency access for firefighters. Strategic location for turnouts and rest stops can improve potential connectivity to water sources for firefighters or act as safe haven for firefighting personnel. Importantly, the ROW may serve as a future corridor for communication infrastructure which can support emergency management and enhance human safety, all of which can be considered with the design. Fire break: Effective firebreak design should be considered, impacts weighted, and discussed with the goal of achieving FPIC in the Project design. Fire source: Roads provide access for people (a primary contribution to wildfire), fires are more likely to start near roads (the result of drying, and ignition sources). Appropriately sized culverts must be positioned to ensure flow across the ROW to maintain hydrological connectivity and prevent

			2024). The function of a firebreak also causes the conditions that can lead to the read acting as a source of wildfire. Draft EA/IS modelling demonstrated increase of heat and drier conditions which results in a medium uncertainty of wildfire risk but a probable increase of wildfire frequency. It is important that the Project does not contribute to these drier conditions (mainly to the hydrological condition of the surrounding areas) and potentially exacerbating the wildfire conditions.	drying effects which exacerbate wildfire potential. Please also refer to Section 2.3 for wetland and hydrological concerns and recommendations. Additionally, signage highlighting wildfire risk should be installed to encourage behaviour that will reduce the human potential to serve as ignition sources.
174	Appendix I- Climate Change Resilience Review	Section 3.1- Average Climate Trends and Section 4.1 Future Climate	Climate conditions and future predictions were based on a 30-year period (1981–2010) that excludes the most recent years of weather data. Nibinamik is concerned that the baseline dataset used does not represent the most extreme weather events, in particular rainfall or snowfall intensity and duration. This may result in the modelling outputs not predicting the potential severity of weather that the WSR may experience. The operational lifespan of the road is expected to be at least 75-years, so it is reasonable to rely on a more substantive weather dataset to capture extreme events between 2010 and 2025, as well as pre-1981. This would support engineering and design consideration to ensure: • the road is equipped to manage the potential snow and rain volumes; and • bridges are designed to accommodate the maximum potential debris flows.	A robust set of data is needed to make predictions on local climate trends and potential. Extremes from recent years and earlier is necessary to properly calculate the potential climate events and ensure the design is robust enough to withstand those events. This should consider Indigenous Knowledge and experiences of weather events. The project and operator should consider triggers for road and bridge upgrades if expected weather events (such as rain) are exceeded. Please also refer to comments relating to precipitation management in the groundwater and surface water section above.
175	Appendix I- Climate Change Resilience Review	Section 4.1 Future Climate And	It is noted that the application of the most conservative emissions scenario is the best approach to predicting and addressing plausible effects of the environment on the	Mitigation should specifically apply the SPP-5 predictions to the design criteria.

4.2 Extreme Precipitations	Project. Historical data suggests the 1:100 year event would see a maximum of 113mm of precipitation. The IDF data predictions note that in an SPP-5 (highest emissions) scenario the 100-year rain event would produce 180mm of precipitation. Mitigations include mention of applying the 1:100-year design criteria for culverts and bridges (plus 30 to 40% increase of IDFs). 40% of 113m does not achieve the 180mm capacity as the SPP-5 scenario suggests is prudent and the design mitigation does not state which IDF criteria is applied.	

ENVIRONMENTAL OBLIGATIONS AND CLIMATE CHANGE

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/RECOMMENDATION
176	Draft EA/IS Section 03 Evaluation of Project Alternatives and Section 25 Project Effects on Canada's Ability to Meeting its Environmental Obligation and its Climate Change Commitments	Draft EA/IS Section 3.2.5.6 Review Results and Select Preferred Route and Section 25.3 Assessment of the Project's Effects	The most preferable route from a biological and physical perspective is not the most preferred option. The assessment of the project effects (or benefits) on Canadas commitments to biodiversity conservation, caribou, wetlands, and migratory birds characterizes that there are no net effects. This is inconsistent with the concerns identified throughout this technical review, inconsistent with western science evidence on the effects of development and observed impacts in the minable oil sands region which serves as an analog. Nibinamik (among other Indigenous communities) is presenting concerns with respect to the ability maintain traditional land use and appropriately implementing Indigenous Knowledge, the assumption	The ongoing Regional Impact Assessment for the Ring of Fire provides an important opportunity to address regional impacts and ensure biodiversity, caribou, wetlands, and migratory birds are conserved. This Project should fully uphold all commitments, accommodations, and mitigations identified through that assessment. In addition, it should proactively offset its impacts through wetland replacement, reforestation, land set-asides, or Indigenous-led conservation projects—especially in areas identified by Nibinamik as critical for caribou, migratory birds, or wetlands. Effective mitigation must include long-term monitoring, adaptive management incorporating Indigenous Knowledge, and incentives for electrification and renewable energy to support emission reductions. These

			that the Project supports Targets 12 and 15 from Canadas Biodiversity Goals and Targets is not wholly accurate. There is risk that the Project becomes an enabling mechanism for unsustainable regional development, repeating past Canadian examples.	measures would directly contribute to Canada's biodiversity goals, including Target #3 to conserve 30% of land and water by 2030. Importantly to mitigate the risk of repeating past Canadian examples of unsustainable regional development the regional strategic assessment (RA) must guide Project planning and related development.
177	Section 25 Project Effects on Canada's Ability to Meeting its Environmental Obligation and its Climate Change Commitments	n/a	Cumulative impacts from roads are well documented, yet the Draft EA/IS dismisses them as negligible. Evidence from the Alberta Oil Sands Region exemplifies how small road footprints facilitated massive regional disturbance. The Draft EA/IS ignores foreseeable mining as a gateway to the Ring of Fire. Without mining impacts (proven and observed across Canada), cumulative effects are understated.	The Provincial and Federal Government should consider requirement for a case-comparison analyses (e.g., comparison with Highway 63 and the expansion of mining) to inform cumulative effects projections. Cumulative effects scenario modeling should incorporates foreseeable mining and industrial activity enabled by the Project. This should explicitly assess cumulative effects of foreseeable mining operations, including acid-generating potential, tailings management, water contamination risks, and Scope 3 emissions in climate analysis.
178	Section 25 Project Effects on Canada's Ability to Meeting its Environmental Obligation and its Climate Change Commitments	Section 25.1 Federal Environmental Obligations	This Project is more likely to undermine, than support, Canada's biodiversity commitments (CBD 2030 Targets) through habitat loss, fragmentation, increased predation risk, aquatic impacts, spreading invasive species, and causing hydrological disruption. Additionally the construction of the Project contradicts federal caribou recovery strategy by fragmenting critical habitat, increasing predation risk, and lacking long-term wildlife monitoring. Migratory birds face foreseeable impacts: habitat fragmentation, reduced breeding success, increased collision risk, forestry-	In alignment with the comment above the Proponent should implement a biodiversity offsetting plan tied to CBD 2030 Targets, identify conservation or land set-asides equivalent to lost habitat and create the conditions necessary to demonstrate there will be no-net-loss or net-gain for biodiversity. Nibinamik further recommends a caribou-specific mitigation and monitoring plan developed with Indigenous partners. This must include Indigenous established thresholds for disturbance, predator control if necessary, and enforceable triggers for adaptive management if

			induced loss of habitat, and tailings pond mortality.	population declines are observed. The cumulative effect on migratory birds must consider industrial and forestry development to accurate predict the pending contravention of the Convention for the Protection of Migratory Birds through incidental mortality.
179	Section 25 Project Effects on Canada's Ability to Meeting its Environmental Obligation and its Climate Change Commitments	Section 25.1 Federal Environmental Obligations	Canada's wetland commitments are inadequately addressed: scope limited to Ramsar sites, no offsetting for wetland loss, no long-term monitoring of fragmentation impacts.	The Project should expand wetland analysis to include all wetlands in the RSA. In order to effectively protect wetlands within the LSA and RSA the regulator must mandate wetland offsets/replacement within the local watershed and require hydrological/hydrogeological monitoring over the project lifecycle.
180	Section 25 Project Effects on Canada's Ability to Meeting its Environmental Obligation and its Climate Change Commitments	Section 25.2 Commitments in Respect of Climate Change	This Draft EA/IS assessment of air impacts are identified in Section 2.5 above. In addition to deficiencies and concerns note above the Project does not include a net-zero 2050 commitment or consider Scope 3 emissions (especially linked to mining or forestry): only Scope 1 and 2 emissions considered. In addition, there is no plan for electrification or renewable integration into this Project.	The GHG analysis should be expanded and include Scope 3 emissions to understand the Project impacts on Canada's Net-Zero commitments. This Project must also consider decarbonization and incentives for electrification integration.
181	Section 25 Project Effects on Canada's Ability to Meeting its Environmental Obligation and its Climate Change Commitments	Section 25.1 Federal Environmental Obligations	The Project is premature to suggest Project supports Biodiversity Targets 12 & 15 (supporting traditional land use, respecting IK) without demonstrated incorporation of Indigenous input. A lack of explicit safeguards, binding mitigation, transparent monitoring, and Indigenous inclusion as noted throughout this Technical Review, undermines credibility of this claim.	The Project must mandate Indigenous co-governance in monitoring and adaptive management to ensure Nibinamik, among other affects nations, are included in the governance decisions affecting their Traditional Territory. This should also include publicly available monitoring reports and enforceable project conditions tied to compliance with environmental and climate commitments.

PROJECT CONTRIBUTIONS TO SUSTAINABILITY

COMMENT #	DOCUMENT NAME	SECTION REFERENCE	ISSUE	QUESTION/RECOMMENDATION
182	Draft EA/IS Section 26 Project Contributions to Sustainability	Section 26.1 Assessment Considerations and Section 26.3 Engagement and Consultation	Sustainability is defined by Webequie and government standards. The engagement and consultation section highlights issues of importance and the essential value that bringing in key issues and Indigenous Knowledge from local communities such as Nibinamik. Key issues of importance that are address by the project align with the SDG, which is an admirable comparison standard. However, in absence of the Free Prior and Informed Consent (FPIC) from Nibinamik through Nation-specific engagement process the project falls short of meeting another important United Nations principle, and one which the Government of Canada has ratified through adopting the UNDRIP.	Robust contribution from all affected First Nations, including Nibinamik has not been embedded into this project. Nibinamik-specific process for consultation have not been implemented and so it has not yet been possible for Nibinamik to consider how this project can be provided with Free Prior and Informed Consent from Nibinamik. this project should strive not only to meet the mentioned SDG but also the UNDRIP and FPIC. It is recommended that the Project engage with Nibinamik to fully understand what capacity funding and additional project contributions are required from Nibinamik to obtain their FPIC.
183	Draft EA/IS Section 26 Project Contributions to Sustainability	Section 26.5 Planning and Design Section 26.7.4 Principle 4: Precautionary Principle and consideration of Uncertainty and Risk of Irreversible Harm	Long-term planning and design is noted to have resulted in a project that can only be described a sustainable and the various assessment studies contained with the Draft EA/IS are meant to prove this Project will have a sustainable outcome. As demonstrated in Figure 26-1 the ecological condition influences all other aspects of well-being including Aboriginal and Treaty Rights. With the bulk of potential deficiencies in the Draft EA/IS it is unclear that this project will not result in impacts to Nibinamik rights. By its very nature the Draft EA/IS addresses many uncertainties and point out as much. While the Project states to have applied a robust mitigation hierarchy, this review offers some opportunity for improvement, these may also address uncertainties.	The content herein highlights challenges with the Draft EA/IS content and its predicted results. It is not clear that the assertion of Project sustainability is certain. To improve this potential it is recommended that the Regional Assessment is completed first. The completion and integration of the Regional Assessment and ongoing involvement with Nibinamik (among other first Nations) may serve to reduce uncertainties and reduce the risk of irreversible harm by way of improving the identification of relevant mitigations.

October 24, 2025

Early Circulation of the Draft Environmental Assessment Report/Impact Statement for Review

Dear Chief Sugarhead,

We hope that this finds you and your community well.

On behalf of Webequie First Nation and the Webequie Supply Road (WSR) Project Team, I would like to extend our sincere thanks to you and your community for taking the time to review and provide comments on the Draft Environmental Assessment Report/Impact Statement (EAR/IS) for the Webequie Supply Road Project.

Your feedback plays a vital role in informing and shaping the approach to assessing potential effects and benefits of the Webequie Supply Road. With the review and comment period closed, the WSR Project Team will undertake the following next steps: 1) Review comments received from Indigenous communities; 2) Provide responses to Indigenous communities; 3) Revise the EAR/IS, where applicable; 4) Continue to engage with Indigenous communities to discuss the EAR/IS; and 5) Submit the Final EAR/IS to government regulators for decision making, which will include a further opportunity for Indigenous communities to review and provide feedback.

As we move forward, we remain committed to ongoing dialogue and collaboration with Indigenous communities. Our team is available to meet with your community to review sections of the Draft EAR/IS and technical reports of interest in the proposed methods below. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the Draft EAR/IS.

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Draft EAR/IS. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the Draft EAR/IS with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the Draft EAR/IS with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

Method	Description
	(Council, staff, community members, or technicians) to discuss the Draft EAR/IS facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the Draft EAR/IS to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the Draft EAR/IS presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the Draft EAR/IS process with a local translator that the Project team will pay for to explain the Draft EAR/IS. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Draft EAR/IS.

Should you have any questions, or if you would like to schedule a meeting to discuss, please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

Sincerely,

Michael Fox

Webequie Supply Road Project
Winter Geotechnical Drilling Program – Field Notice

What's happening?

AtkinsRéalis is proposing to undertake a geotechnical drilling program for the Webequie Supply Road (WSR) project to support the coordinated provincial and federal environmental assessment/impact assessment and to further engineering design. This letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). All works will be conducted in accordance with any permit conditions issued by MNR.

A borehole drilling program is planned to occur using a multipurpose helicopter transportable drill. Helipad and drill pads will be cleared by a tree cutting team that will precede the drilling teams to ensure safe landing of the helicopters and drill equipment. The locations proposed for drilling are presented in the attached map.

Schedule

Work is expected to begin on January 15, 2026, and will continue until approximately the end of April, 2026, depending on weather conditions. **At this time, no permits or authorizations have been received from the MNR. The field program schedule is contingent on receiving all of the required permits and authorizations**

What to expect

Field crews will be accessing sites across the study area by helicopter—you may see helicopters in the area carrying personnel and equipment. Crews may need to clear brush and trees from helipad sites to allow helicopter access, which could require the use of chainsaws. Helicopters may be flying into the Webequie and Ogoki Post airports for refueling and staging purposes.

North Caribou Lake First Nation — First Nation Community

Contact Date: Oct 29, 2021 16:30 Method: E-mail
Topics to be Discussed: Notice of Commencement of Environmental Assessment
Don Parkinson of SNC Lavalin Inc (SNC) emailed the Notice of Commencement of Environmental Assessment (EA) for the Webequie Supply Road (WSR) Project to all stakeholders including the public, Indigenous communities, agencies and other interested parties. The email informed the stakeholders that the Terms of Reference (ToR) with amendments for the WSR EA Study was approved by the Minister of the Environment, Conservation and Parks (MECP) on October 8th, 2021. The email also informed them that the approved ToR and Notice of Approval can be accessed on the project website. It further encouraged participation in future consultations.
Attached File: SNC-Public Notice of Commencement of EA-2021-10-21.pdf

Contact Date: Nov 03, 2021 14:00 Method: Mail
Topics to be Discussed: Community Newsletter, Terms of Reference, Environmental Assessment Process
Melanie Laforest and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team mailed a letter and 50 copies of a newsletter to North Caribou Lake First Nation's (NCLFN) Chief Cornelius Benson, advising that the WSR Project's Terms of Reference (ToR) had been approved with amendments by the Minister of the Environment, Conservation and Parks, and that the Environmental Assessment (EA) process would begin. The letter indicated that multiple copies of the newsletter were enclosed for distribution to the community. The newsletter provided information about the steps involved in the EA process, including the Notice of Commencement, Baseline Studies and Identification of Alternatives, Engagement and Consultation, and the Indigenous Knowledge Program. Michael provided a link to the WSR Project website along with himself and Don Parkinson of SNC-Lavalin's email address if NCLFN has any questions or comments.

Topics to be Discussed: Indigenous Knowledge / Indigenous Land and Resource Use Program
Brianna Patrick and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an e-mail to North Caribou Lake First Nation's (NCLFN) Chief Cornelius Benson, with an attached package that included a letter, map, and Information Sharing Agreement. The letter advised that the WSR Project Team are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program and inquired whether NCLFN would be interested in participating in the Program. The letter included information about the IKLRU Program purpose, phases and guiding principles. The letter noted the importance of the protection and confidentiality of information collected and used in the IKLRU Program and indicated that a draft Information Sharing Agreement was included in the package, which outlined how confidential and sensitive information would be utilized in the WSR Project's environmental assessment and design process. A map of the Preliminary Study Areas for Indigenous Peoples Land Use and Interests was also included in the package. The letter asked NCLFN to confirm their interest in participating in the Program by January 27, 2022. Brianna and Michael provided their email and cell phone contact information if NCLFN has any questions.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Marian Tibor-McMahon and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax, to North Caribou Lake First Nation's (NCLFN) Chief Cornelius Benson, which included a letter and map of the WSR Socio-Economic Study Areas. The letter stated that a key component of the EA/IA process is collecting socio-economic information within the Project study area, and as a result, the WSR Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered. It included information about what information the socio-economic program will gather, what the study area is, and detailed the components of the program. The letter invited NCLFN to participate in the WSR socio-economic primary data collection program. The letter asked NCLFN to confirm their interest in participating in the program by February 3, 2022. Marian provided her email and cell phone contact information if NCLFN has any questions.

Brianna Patrick and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a package via Canada Post to North Caribou Lake First Nation's (NCLFN) Chief Cornelius Benson, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for NCLFN on August 2, 2022, with registration links for the session. The information session will include a presentation on WSR's Environmental Assessment / Impact Assessment activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and attached a poster for staff to post on the community website, community Facebook page, other in-community locations, Michael's email and cell phone contact information if NCLFN has any questions or comments.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session for North Caribou Lake First Nation (NCLFN) on August 2, 2022. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, Don played a video presentation which included information on WSR's Environmental Assessment/Impact Assessment (EA/IA) activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. After the video presentation, Don noted that no comments have been received from NCLFN at this time, and that the Project Team would be happy to visit the community to discuss the Project further. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. There were no community representatives in attendance. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing.

Topics to be Discussed: ATRI Forum Invitation
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Cornelius Benson of North Caribou Lake First Nation (NCLFN) with an attached invitation for the Aboriginal and Treaty Rights and Interests (ATRI) Forum hosted by the Province of Ontario in Thunder Bay on February 8 & 9, 2023. The poster explained that the 2-day forum will focus on discussing potential impacts to Northern Indigenous Communities ATRI as they relate to the WSR, Northern Road Link (NRL), and Marten Falls First Nation Community Access Road (MFCAR) Projects. The poster provided more information on how community representatives can attend, the purpose of the forum, who should attend from each community, and an email address for the community to RSVP. A preliminary agenda was also included on the poster. The Province of Ontario, Michael Fox of WSR, Andrea Nokleby of MFCAR, and Mishal Neesar of NRL provided their emails on the poster for further information if NCLFN has any questions or comments.

Topics to be Discussed: Radio, Livestreams, Engagement Options
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent an email to North Caribou Lake First Nation (NCLFN)'s Chief Cornelius Benson which included a letter and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on March 14, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on an overview of the Alternatives Assessment Process, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team will begin Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if NCLFN has any questions or comments.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to North Caribou Lake First Nation (NCLFN)'s Chief Cornelius Benson, with a letter inviting the community's participation in the Socio-Economic Primary Data Collection Program as part of the WSR Environmental Assessment/Impact Assessment (EA/IA). The letter was a follow-up to the letter sent on December 20, 2021, which outlined the purpose of the socio-economic study, types of information that the Project team wants to gather, and suggested primary data collection methods. The letter explained that the Project team has a timeframe for the EA/IA process to complete the studies and document the results, and the goal for the year is to complete a Draft Socio-Economic Existing Conditions Report. The letter explained that the Project team would like to collaborate with the community to discuss and collect socio-economic information and/or verify information gathered to-date based on current research to help understand existing social and economic conditions. The letter provided an overview of the preliminary Valued Components for the EA/IA to represent aspects of social and economic conditions that are important to the community which require information gathering. The letter requested an indication of NCLFN's interest in participating in the Socio-Economic Primary Data Collection Program by April 17, 2023, because it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by June 16, 2023.

The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if NCLFN has any questions or comments.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for North Caribou Lake First Nation (NCLFN) on May 23, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, the Project Team played a voiceover presentation which included a testimony by the Webequie First Nation Chief Wabasse and information on WSR's Environmental Assessment / Impact Assessment (EA / IA) activities including alternative assessment methodology and results, valued components, preferred alternative and consultation approach and next steps. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. The Project Team informed the audience that a recording of the session will be made available through YouTube and the WSR Website for viewing. The team also informed the audience of the upcoming radio and livestreaming events the following day. There were no attendees present at this session.

Topics to be Discussed: Indigenous Knowledge / Land and Resource Use Program
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Cornelius Benson of North Caribou Lake First Nation (NCLFN) with an attached letter as a follow up to the correspondence sent on December 13, 2021 regarding NCLFN's participation in the Indigenous Knowledge / Land Resource Use (IKLRU) Program for the WSR Project. The letter noted that the Project team has also phoned the band office on January 17, 2022, February 24, 2022, April 13, 2022 and sent an email on January 20, 2022 to follow up and advise that the IKLRU Program has started and to confirm if the community is interested in participating. The letter provided an overview of the IKLRU Program and indicated that the community has been determined ineligible to receive participant funding to participate in the IKLRU Program by the Province of Ontario. However, Ontario remains open to reconsider their decision, if the community can provide information available as it relates to any Aboriginal and/or Treaty Rights that may be affected in the area near the proposed WSR Project. The letter encouraged the community to contact Ontario if they wish to have their eligibility to receive participant funding reconsidered and the Project team offered their support throughout the process. The letter provided an overview of the IKLRU Program and its aim to complete the studies and draft a baseline conditions report as part of the Environmental Assessment / Impact Assessment. The letter requested an indication of the community's interest in participating in the IKLRU Program by the end of June 2023. The letter indicated that all knowledge that is shared will be safeguarded with a formal Confidentiality and Data Sharing Agreement, which will ensure all input from the community will remain the ownership of the community, and that no information will be shared beyond the Project team, without the consent of the community. The letter also indicated that as the Proponent, Webequie First Nation bears the responsibility for the Project and the assessment processes being applied to it. Michael provided his contact information and closed by wishing the community continued health and wellness.

The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on Proposed Aggregate / Rock Source Areas, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 Part 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if NCLFN has any questions or comments.

Topics to be Discussed: Indigenous Knowledge / Land and Resource Use Program
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team mailed a package via Canada Post to Chief Cornelius Benson of North Caribou Lake First Nation (NCLFN) with an attached letter as a follow up to the correspondence sent on December 13, 2021 regarding NCLFN's participation in the Indigenous Knowledge / Land Resource Use (IKLRU) Program for the WSR Project. The letter noted that the Project team has also phoned the band office on January 17, 2022, February 24, 2022, April 13, 2022 and sent an email on January 20, 2022 to follow up and advise that the IKLRU Program has started and to confirm if the community is interested in participating. The letter provided an overview of the IKLRU Program and indicated that the community has been determined ineligible to receive participant funding to participate in the IKLRU Program by the Province of Ontario. However, Ontario remains open to reconsider their decision, if the community can provide information available as it relates to any Aboriginal and/or Treaty Rights that may be affected in the area near the proposed WSR Project. The letter encouraged the community to contact Ontario if they wish to have their eligibility to receive participant funding reconsidered and the Project team offered their support throughout the process. The letter provided an overview of the IKLRU Program and its aim to complete the studies and draft a baseline conditions report as part of the Environmental Assessment / Impact Assessment. The letter requested an indication of the community's interest in participating in the IKLRU Program by the end of June 2023. The letter indicated that all knowledge that is shared will be safeguarded with a formal Confidentiality and Data Sharing Agreement, which will ensure all input from the community will remain the ownership of the community, and that no information will be shared beyond the Project team, without the consent of the community. The letter also indicated that as the Proponent, Webequie First Nation bears the responsibility for the Project and the assessment processes being applied to it. Michael provided his contact information and closed by wishing the community continued health and wellness.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for North Caribou Lake First Nation (NCLFN) on August 1, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. The meeting began with a video of Chief Wabasse discussing the importance of the project to the Webequie Community. Don Parkinson explained that the Part 2 of Consultation Round 2 will discuss the Project team's work on the evaluation of alternatives for supportive infrastructure which includes aggregate rock sources for pits and quarry access roads and construction camps. Don presented information on how various factors were evaluated to produce preferred options based on a lower score. Don also explained the various engineering structures such as culverts, bridges, access roads etc. in detail and shared graphics illustrating what the proposed structures would look like after completion. The WSR Project Team had a platform which provided a real-time translation of the session in Oji-Cree. No participants from NCLFN were in attendance. Jennifer reiterated that the Project Team would like to hear from NCLFN community members in-person and that a recording of the session would be available through YouTube and the WSR Website.

Topics to be Discussed: Aboriginal Treaty Rights and Interests Forum Invitation
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Cornelius Benson of North Caribou Lake First Nation (NCLFN) with an attached invitation for the Aboriginal and Treaty Rights and Interests (ATRI) Forum hosted by the Province of Ontario in Thunder Bay on November 21-23, 2023. The poster explained that Webequie First Nation and Marten Falls First Nation encourage the community to participate in the follow-up Forum to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link (NRL), and Marten Falls Community Access Road (MFCAR) Projects. The poster provided more information on how community representatives can attend, the purpose of the forum, who should attend from each community, and an email address for the community to RSVP. The Province of Ontario, Michael Fox of WSR, Andrea Nokleby of MFCAR, and Mishal Neesar of NRL provided their emails for further information if NCLFN has any questions or comments.

Topics to be Discussed: WSR Consultation Progress Report Round 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to North Caribou Lake First Nation’s (NCLFN) Chief Cornelius Benson which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 2. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 2. The letter explained that the Consultation Progress Report summarizes the documents from Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 3. Michael's email and cell phone contact information was provided if NCLFN has any questions or comments.

Topics to be Discussed: WSR Newsletter - Issue 31, Consultation Round 2 Report, Livestream, Radio Show
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax to North Caribou Lake First Nation's (NCLFN) Chief Cornelius Benson, with a letter and poster attached. The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter provided the status of delivery as of February 28, 2024. An overview of the Consultation Progress Report for Round 2 was provided and the letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on March 4, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on how Indigenous Knowledge is used in the EA, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if NCLFN has any questions or comments.

The fax also included the English WSR Newsletter – Issue 31 which provided information about the wolverine study, caribou study, and radio shows and livestream schedule for March 2024. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael and Don Parkinson of AtkinsRéalis provided their email address and phone number if NCLFN has any questions or comments.

Topics to be Discussed: Draft Community-Specific Preliminary Existing Conditions Document
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to North Caribou Lake First Nation's (NCLFN) Chief Leo Sakchekapo with a letter and report attached regarding the Community-Specific Existing Conditions Summary Document. The letter requested the community's review of the draft Community-Specific Existing Conditions Summary document, which is based on the data and information collected for the Socio-Economic Existing Conditions Report of the EA/IA and presents the preliminary findings specifically collected for NCLFN. The letter provided a list of the community-specific baseline information provided in the document and indicated that the Project Team would appreciate hearing feedback from the community on the document as the team is always open to working with the community for further improvement on the content.

11:41
The Chief and Band Council email from North Caribou Lake First Nation (NCLFN) responded to the email with an attached document with the newly elected Chief and Council.

Topics to be Discussed: Virtual Information Session Round 3 Part 1, WSR Newsletter - Issue 34
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to North Caribou Lake First Nation's (NCLFN) Chief Leo Sakchekapo, with a letter, poster, and English WSR Newsletter - Issue 34 attached. The letter and poster advised that the WSR Project Team is hosting a virtual information session for NCLFN on June 10, 2024, from 11:00-11:45am EST with registration links for the session. The information session will include a presentation on WSR's Environmental Assessment / Impact Assessment (EA/IA) activities including: project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if NCLFN has any questions or comments.

The newsletter provided information about the Geology preliminary findings and the upcoming community Virtual Information Sessions for Round 3 of consultation. Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Carolina Montrose and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Leo Sakchekapo of North Caribou Lake First Nation with an attached invitation for the Three Road Project Gathering & Expo hosted by Webequie First Nation (WFN) and Marten Falls First Nation (MFFN), The invitation noted that the event was funded by the Province of Ontario, our Treaty Partner and that it would be held in Thunder Bay on June 11-13, 2024. The invitation also noted the need to continue the momentum of the last two gatherings which focused on Aboriginal and/or Treaty Rights and Interests. In addition, the invitation notes that the Gathering & Expo will provide participants with an engaging and interactive space for consultation to learn more about the projects, ask questions, and share feedback focusing on water, peatlands and building roads on peatlands. Day 1 will be specifically for an Elders gathering, providing a comfortable space for Elders to gather and discuss the Projects. The invitation provided funding information and an email address to access the funding.

Topics to be Discussed: Virtual Information Session Round 3 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team held a virtual session as part of Consultation Round 3 for North Caribou Lake First Nation (NCLFN). An Oji Cree translator provided real-time translation of all meeting content. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 3 Part 1 presentation that began with a review of the project to date, followed by a discussion of preliminary results for two valued components: surface water and fish and fish habitat. Participants were informed that the unabridged version of the presentation was available on the website and that this version reported preliminary results for several other valued components. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from NCLFN were in attendance.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to North Caribou Lake First Nation's (NCLFN) Chief Leo Sakchekapo with a letter attached to the email regarding the planned early circulation of the draft Environmental Assessment Report / Impact Statement (EAR/IS). The letter advised that the Project team is planning an early circulation of the draft EAR/IS to provide the opportunity for NCLFN to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. The letter explained that the team anticipates the draft EAR/IS to occur in late fall or early winter of the fiscal year 2024/2025 which will provide communities with an extended review period of 60-days to provide their review and comments. The letter explained that the team would follow up with the community as the project moves closer to the circulation of the draft EAR/IS, including the community would like to receive the document (electronic and/or hard copy). Michael provided his contact information for any questions or comments.

Topics to be Discussed: Consultation Progress Report Round 3
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to North Caribou Lake First Nation’s (NCLFN) Chief Leo Sakchekapo which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 3. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 3. The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that next steps will involve engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement, including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. The letter noted that the future engagement and consultation sessions for communities are tentatively scheduled to start in Winter 2024/2025. Michael's email and cell phone contact information was provided if NCLFN has any questions or comments.

Topics to be Discussed: Livestream, Radio Show, Engagement Options
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent email to North Caribou Lake First Nation's (NCLFN) Chief Leo Sakchekapo with a letter and poster attached. The letter advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on November 12, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on the Assessment of Effects on Geology, Terrains, and Soils, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if NCLFN has any questions or comments.

Topics to be Discussed: Consultation Progress Report Round 3 File Transfer
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) sent an email to North Caribou Lake First Nation's (NCLFN) Chief Leo Sakchekapo with a letter attached regarding follow up for the Consultation Progress Report for Round 3. The letter indicated that on November 5, 2024, the Project team mailed a package via Canada Post to the community containing the Consultation Progress Report for Round 3. The letter also indicated that due to the Canada Post strike which began on November 15, 2024, there has been a delay to the delivery of the report and the team will be sending the files via WeTransfer in a separate email.

The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. A list of key milestones and topics covered in the round of consultation was provided. The letter indicated that the WSR Project Team is available for additional engagement sessions and provided a list of engagement options. Michael's email and cell phone contact information was provided if NCLFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 4 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team conducted a virtual community meeting on the Zoom platform with North Caribou Lake First Nation. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 4 Part 1 presentation that began with a review of the project to date, followed by a discussion of the process of effects assessment, then an explanation of cumulative effects and how they are determined and managed. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from NCLFN were in attendance.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Ian Frederickson and Michael Fox of Indigenous and Community Engagement (ICE) and the?Webequie?Supply Road (WSR) Project team sent an email to North Caribou Lake First Nation Council with links to?invitations for the Three Road Project Gathering & Expo hosted by ?Webequie?First Nation (WFN) and Marten Falls First Nation (MFFN) with support from the Province of Ontario. The email noted that the gathering will provide an engaging and interactive consultation space to discuss the WSR draft EAR/IS, Marten Falls Community Access Road draft EAR/IS, and Northern Road Link Projects. The invitation provided the dates and locations for the events in Thunder Bay and Timmins: February 19-20, 2025, at the Valhalla Inn Hotel in Thunder Bay, and February 25-26, 2025, at the Cedar Meadows & Spa in Timmins. A general summary of event highlights was provided along with information about funding and attendance. The invitation asked the community to RSVP by January 31, 2025, to the Province of Ontario's email address provided?to reserve accommodations. The invitation noted that the event aims to?foster an understanding of the three road projects and their potential impacts while creating a collaborative space for consultation. For further questions regarding funding inquiries or additional details, the Province of Ontario's email address was provided.?

Topics to be Discussed: Winter 2025 Field Notice
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) sent an email to North Caribou Lake First Nation's (NCLFN) Chief Leo Sakchekapo with a winter field notice attached. The field notice indicated that field work has been scheduled to take place from February 19-March 1st, 2025 to manually remove caribou GPS radio tracking collars. The notice indicated that the collars were placed on the caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, the collars were set to automatically release in February 2024, however not all collars released as intended. The notice explained that a specifically trained team will manually remove collars without harming the animal. The notice also provided information on what to expect and where the team may need to travel but noted that the field team may need to travel outside the study area boundaries. A map was provided on the second page of the notice.

Topics to be Discussed: Virtual Information Session Round 4 Part 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a package via Canada Post to North Caribou Lake First Nation's (NCLFN) Council, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for Round 4 Part 2 for NCLFN on March 17, 2025, from 11:00-11:45am EST with registration links for the session. The information session will include the second presentation on WSR's Cumulative Effects Assessment. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and provided a list of engagement options. The letter also attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if NCLFN has any questions or comments.

Contact Date: Mar 17, 2025 11:00 Method: Indigenous Community Meeting
Topics to be Discussed: Virtual Information Session Round 4 Part 2
The Webequie Supply Road consultation team conducted a virtual community meeting on the Zoom platform with North Caribou Lake First Nation (NCLFN). The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 4 Part 2 presentation that began with a review of the project to date, followed by a discussion of the process of effects assessment. After the effects assessment discussion, potential effects and associated mitigation measures were explained using examples from geology, terrain and soils and fish and fish habitat. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from NCLFN were in attendance.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Nancy Jane Sakchekapo of North Caribou Lake First Nation (NCLFN) with an attached letter regarding early circulation of the Draft Environmental Assessment Report / Impact Statement (Draft EAR/IS) for Review for the WSR Project. The letter advised the community that the Draft EAR/IS is now available for the community to review. The letter provided an overview of what is documented in the Draft EAR/IS and explained that it is being circulated in two stages to provide communities with an extended review period to provide comments on the document for a total of 120 days. The two stages of circulation are: 1) Early access for Indigenous communities from June 9 to October 7, 2025, and 2) Public and Stakeholders from August 8 to October 7, 2025. The letter explained that enclosed in the package is the Draft EAR/IS for the WSR Project for review which includes: One hard copy of the main body of the Draft EAR/IS, an electronic copy of the Draft EAR/IS and Appendices, and one hard copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree, and Cree. The letter also provided a link to the Draft EAR/IS on the Project website. The letter also noted that the draft Record of Consultation and Engagement with Indigenous communities, public, and stakeholders is not included in the Draft EAR/IS, but will be provided to the community when the Draft EAR/IS is released for public and stakeholder review on August 8, 2025. In the interim, consultation and engagement activities received from the communities is documented in the Consultation Progress Reports for Rounds 1, 2, and 3, previously sent to the community at key milestones in the EA/IA process, and can also be found on the Project website. The letter encouraged the community to actively participate in the review of the Draft EAR/IS and provided an email and/or mailing addresses to submit comments. For any questions or to schedule a meeting with the Project Team, Michael also provided his email and phone number.

Topics to be Discussed: Coordination of Hand Delivery of Draft EAR/IS
McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team called the band office of North Caribou Lake First Nation (NCLFN) and spoke with the receptionist. McKenna introduced herself and indicated she is part of the WSR Project team and the purpose of the call is to coordinate a ride for the team members who are delivering the Draft Environmental Assessment / Impact Statement (EAR/IS). The receptionist indicated that she would ask members of their office to try and find someone to pick up the Project team from the airport at the scheduled landing time. McKenna requested that she call back once they find someone to pick up the team in the case there are changes to the charter's landing time.

12:14pm
A councilor for NCLFN named Paul called McKenna on her cell and indicated that he would be the community contact to pick up the Project team from the airport. McKenna gave Paul the charter's scheduled landing time and thanked him.

Topics to be Discussed: Circulation of Draft EAR/IS Follow Up
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) sent an email to Chief Nancy Jane Sakchekapo of North Caribou Lake First Nation (NCLFN) with an attached letter to follow up regarding the circulation of the Draft Environmental Assessment Report / Impact Statement (EAR/IS). The letter provided an overview of the Draft EAR/IS, the timeline for the two-stage review period, and indicated that we are currently in Stage 2 of circulation which ends on October 7, 2025. The letter also informed the community that the Draft EAR/IS is available for the community to review on the project website and learning module and provided the links to access. The letter also provided a link to the draft Record of Consultation, learning module and plain language summaries which were developed to help facilitate the community's review. The letter indicated that the Project team is available for meetings with the community to review sections of the Draft EAR/IS and technical reports of interest and provided a list of engagement options. Michael provided his email address and phone number if NCLFN has any questions or comments.

WSR
WEBEQUIE
SUPPLY ROAD

November 2, 2021

Dear Chief,

On October 8th, 2021, after extended consultations, the Minister of the Environment, Conservation and Parks approved the final Terms of Reference with amendments for the Webequie Supply Road (WSR) project. You can find these amendments on the following website: https://www.ontario.ca/page/webequie-supply-road-project We are now proceeding with the environmental assessment in accordance with the approved Terms of Reference.

As part of the WSR communication and engagement activities, the project team produces regular project newsletters, which you find enclosed a number of copies for distribution to your community members.

If you have any questions, please do not hesitate to ask or phone me at 807-472-6147. We wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road

WSR240-WEB-PR-LT-0299 Web-WSR letter to Chiefs re Newsletter and approved ToR-2021-11-01

November 22, 2021

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment studies. This upcoming week, **WSR Presents: Caribou and Wolverine/Wildlife and Wildlife Habitat/Species at Risk/Breeding Birds.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 23rd at 2:00-3:00 (EST)**. We encourage you and your community members to listen, for this will give your community membersthe opportunity to ask questions. You may call during the radio show at the **toll-free number:1-844-424-0500.**

In addition, the live streaming event is scheduled on the same day as the above radio show at **4:00pm – 4:30pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. All sessions are recorded and accessible on YouTube, you can subscribe at: Webequie Supply Road - YouTube. We have regular updates on our Facebook page that features community photos, informative videos, Frequently Asked Questions along with project information. You can follow WSR on Facebook at Supply Road | Facebook, Twitter, Instagram and http://www.linkedin.com/company/wfnsupplyroad You may also call with questions on the same toll-free number provided above during the live streams.

The WSR Project Team is offering opportunities of engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the WSR Project.

Engagement Options

Method	Description
Focus Group Sessions	With proper Covid-19 protocols in place, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment studies. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse groups(women, elders, youth, land users, etc.)
Community Sessions	With proper Covid-19 protocols in place, community information sessions can be conducted, whereby the WSR Project Team will discuss the Environmental Assessment process with a question-and-answer period at the end of the presentation.
Drop-in Sessions	With proper Covid-19 protocols in place, community members can drop-in at a safe location todiscuss the Environmental Assessment process with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment process facilitated by the WSR Project Team using Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the Environmental Assessment process to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the Environmental Assessment studies presentation and set up a conference call number to go through the presentation based on the area of interest your team wants to focus on and answer any questions.
Local Radio Call In Show	Using the local community radio, the WSR can present the Environmental Assessment studies with a local translator that the WSR will pay for and explain the Environmental Assessmentprocess. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Environmental Assessment process.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching the WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, then we can mail these hardcopy WSR poster to your community for local distribution and all you need to do is email or call us to inform us that you need hardcopies of WSR poster.

Lastly, given the high and daily usage of social media channels by Indigenous leaders and members, you, your Council, and your staff can also follow us on Facebook, Twitter, Instagram, and LinkedIn to stay updated and repost it on your social media accounts to assist in information access, information dissemination, and information request associated with the WSR Project's environmental studies.

To obtain information on the Project, or to provide comments, please visit our website at http://www.supplyroad.ca or contact me at 807-472-6147.

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road
michael.fox@supplyroad.ca

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

INDIGENOUS KNOWLEDGE / INDIGENOUS LAND AND RESOURCE USE PROGRAM FOR THE WEBEQUIE SUPPLY ROAD PROJECT

Information Sharing Agreement

Purpose

The purpose of the Indigenous Knowledge and Land and Resource Use (IKLRU) Program Sharing Agreement is to:

- Document the shared understanding of how the North Caribou Lake First Nation IKLRU Study for the Webequie Supply Road Project will be completed;
- Document the anticipated activities that will be part of the IKLRU Program; and
- Document how IKLRU information will be integrated into the Environmental Assessment Report (EAR) / Impact Statement (IS).

Confidentiality and IK / TLU Sharing

- Webequie First Nation acknowledges that all IKLRU information is the property of North Caribou Lake First Nation and the individual knowledge holders who contributed to the study.
- Webequie First Nation will disclose the IKLRU as required through the regulatory process only.
- Webequie First Nation will store the IKLRU information in a secure location and it will be provided to the appropriate Project staff and consultants only.
- Webequie First Nation will use the IKLRU information to contribute to the EAR / IS.
- Webequie First Nation will not include the full IKLRU report or study in the EAR / IS.
- Webequie First Nation will provide relevant IKLRU information to the appropriate disciplines for use in their EAR / IS sections.
- Webequie First Nation will use the IKLRU information to assess impacts on North Caribou Lake First Nation land and resource use; thus, the IK section of the EAR / IS will summarize the IKLRU information without disclosing specific locations of use.
- Webequie First Nation will use the IKLRU information for the Project regulatory process only, including planning, design, assessment, construction, operation, maintenance and decommissioning.

IKLRU Study

North Caribou Lake First Nation and Webequie First Nation agree that the type of information in the IKLRU Study Plan and scope will be included in the IKLRU Study.

The IKLRU Study will include information about the geographic location of data collected. This can be as numerical coordinates or as a location on a map with appropriate reference points.

Webequie First Nation will accept any additional land and resource use-related information within the IKLRU Study Area, as community members deem appropriate.

North Caribou Lake First Nation and Webequie First Nation agree that upon completion of the IKLRU Study, North Caribou Lake First Nation will approve the Report for use in the EAR / IS.

Signing this Agreement

North Caribou Lake First Nation signing of this Sharing Agreement is no way represents their support for the Webequie Supply Road Project.

Re: Indigenous Knowledge / Indigenous Land and Resource Use Program for the Webequie Supply Road Project

Dear Chief Cornelius Benson,

We hope that this letter finds you and your community well.

Webequie First Nation (WFN) is the proponent of the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will extend from Webequie Airport to the mineral deposit area near McFaulds Lake as shown in the enclosed project map. WFN has started the provincial environmental assessment (EA) and a formal Notice of EA Commencement was issued on October 29th, 2021. The WSR Project is also subject to a federal impact assessment (IA) and the Notice of Commencement of the IA was issued on February 24th, 2020. Collectively the EA and IA are referred to as the "assessments" and will examine potential effects of the WSR Project including mitigation and monitoring, and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS). We will continue to provide you with updates as the assessment process continues, and welcome and appreciate your input throughout the planned consultation and engagement activities.

With this letter, we would like to share with you that we are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program for the Project. The IKLRU Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

The purpose of the IKLRU Program is to:

- Promote sharing of IKLRU information relevant to the Project;
- Help identify potential impacts of the Project, including those on Indigenous rights and interests; and
- Collaborate and work with Indigenous communities to enhance positive impacts or to identify measures to avoid/reduce potential effects on Indigenous rights and interests.

As traditional stewards of the land, we all must make certain that development in the area appropriately addresses the rights, interests, values, traditions, concerns, and aspirations of Indigenous communities within the assessment context, during the life of the WSR Project, and beyond. It is in this spirit that we invite North Caribou Lake First Nation to participate in the IKLRU program.

The IKLRU Program for the WSR Project will occur in two phases:

1. Collecting existing Indigenous Knowledge and information on Indigenous land and resource use that communities are prepared to share with WFN in order to help inform the early stages of the assessments; and
2. Completing project-specific Indigenous Knowledge and Lands & Resource Use studies, or compiling information/data in other form, that can be provided to the Project Team for integration into the assessment.

At this point, we are enquiring whether North Caribou Lake First Nation is interested in participating in the IKLRU Program in either (or both) phases of the Program. We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the IKLRU Program for the WSR Project. In addition, the Project Team can help communities access this funding, where applicable.

While the IKLRU Program is distinct from the Consultation Program for the WSR Project, the two are complementary and collectively serve to solicit Indigenous perspectives, values and inputs with respect to project planning and assessment process. You may share as much or as little IKLRU information as you wish, and in whatever form you prefer. Your community will also have the opportunity to review the EAR / IS to ensure accuracy of IKLRU information, including if it has been adequately, appropriately, and respectfully represented within the assessment process.

While there are significant benefits to integrating Indigenous Knowledge from your community in the assessment, we also recognize that this knowledge belongs to your community and that confidentiality needs to be respected. Our approach to working with your community on the IKLRU Program will be guided by the following key principles:

- The people of your community are a source of knowledge on uses of the land and its resources, associated cultural practices, and community values.
- We are your partner – our goal is to work together with you to conduct the IKLRU Program in a way that contributes to your community's well-being so that Indigenous Knowledge and land and resource use information can be meaningfully integrated into the assessment process.

Protection and confidentiality of IKLRU information is of the utmost importance to the Project Team. To honour and respect this important information, we propose establishing an Indigenous

Knowledge Sharing Agreement with your community prior to the collection and use of your community's information. The Sharing Agreement would outline how confidential and sensitive information would be utilized in the WSR Project's assessment and design process. It would also adhere to all community-specific protocols and OCAP (ownership, control access and possession) principles. Once you've confirmed participation in the IKLRU Program, we will work with you to prepare the Sharing Agreement. We have attached a draft Indigenous Knowledge Sharing Agreement for your review and consideration.

In order to confirm that North Caribou Lake First Nation is interested in participating in the IKLRU Program, we ask that you contact us by January 27, 2022. Our Project Team will also reach out to you in a few days if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council to discuss next steps, including the methods and protocols your community will follow.

To express your community's interest or if you have any questions regarding the IKLRU Program or the WSR Project, please feel free to contact Michael Fox (807-472-6147; michael.fox@indigenousengagement.ca) or Brianna Patrick (204-223-5770; brianna.patrick@indigenousengagement.ca) of the Project Team.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Chief Cornelius Wabasse
Webequie First Nation

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Cornelius Benson,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as "the assessments" and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite North Caribou Lake First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

Next Steps

In order to confirm that North Caribou Lake First Nation is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Michael Fox, Regional Consultation Coordinator, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Cornelius Benson,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as "the assessments" and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite North Caribou Lake First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

February 4, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment and Impact Assessment (EA / IA) process. This upcoming week's session is: **WSR Presents: EA / IA Process.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 9th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is exploring virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

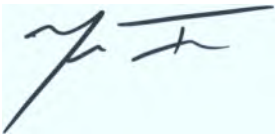
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

WSR
WEBEQUIE
SUPPLY ROAD

February 18, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Indigenous Knowledge. This upcoming week's session is: **WSR Presents: Indigenous Knowledge - Part 1.** The Project Team has planned an Indigenous Knowledge series, this upcoming week being the first part to that series.

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 23rd, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to brianna.patrick@indigenousknowledge.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

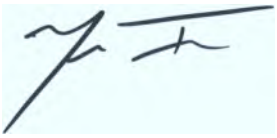
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

April 1, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Socio-Economics. This upcoming week's session is: **WSR Presents: Socio-Economics.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **April 6th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to brianna.patrick@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.

Date Published: Apr 26, 2022

WEBEQUIE SUPPLY ROAD (WSR) PROJECT

Socio-Economic Study Plan
Fact Sheet

What is the primary purpose of the Socio-Economic Study Plan?

To characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) as a result of the construction and operation/maintenance of the WSR. Provide recommendations for minimizing negative socio-economic effects and enhancing beneficial effects of the Project.

What are socio-economics?

Studying socio-economics provides information about current jobs, income, education and housing conditions in a community.

What kind of information is going to be gathered?

- Community values;
- Community demographics (age, gender, marital status, education, labor force activity, health, etc.);
- The type of access each community has to education, jobs, or transportation; and
- Well being and safety.

Who is the information being gathered from?

- The 22 Indigenous communities that have been identified as the ones whose established or asserted Aboriginal and Treaty rights may be adversely affected by the Project and/or may have interests in the project.

*The Project Team will respect protocols and work with each community to understand how the information will be transferred, stored, and applied, and will be protected and kept confidential.

How is the information on community socio-economics being collected?

Primary information will be collected from Indigenous communities:

- A socio-economic survey using Survey Monkey, which will be sent by e-mail/letter;
- Key informant interviews with Chief and Councils, band administration staff, social service providers, healthcare providers, and knowledge keepers; and
- Collection of Indigenous knowledge through engagement activities.

Secondary information will be collected and reviewed:

- Published data from government websites, Indigenous community websites, municipal websites, and other open-source data. This information will be used to identify community demographics, community infrastructure, community social services, etc.

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Cornelius Benson,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as "the assessments" and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite North Caribou Lake First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

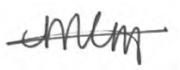
Next Steps

In order to confirm that North Caribou Lake First Nation is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,



Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Michael Fox, Regional Consultation Coordinator, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

Encl.
Project Map

April 29, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on air quality and noise & vibration. This upcoming week's session is: **WSR Presents: Air Quality + Noise & Vibration.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **May 4th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

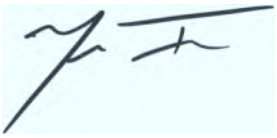
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

WSR
WEBEQUIE
SUPPLY ROAD

May 13, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on wildlife and species at risk. This upcoming week's session is: **WSR Presents: Wildlife and Species at Risk.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **May 18th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

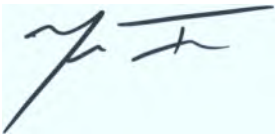
Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

May 27, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on field studies related to water. This upcoming week's session is: **WSR Presents: Field Studies - Water.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 1st, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

July 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

The WSR Project Team is currently hosting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

If the WSR Project Team has already hosted a virtual information session for your community, you can watch the recording of your community's session at: **supplyroad.ca/sessions/**. You can leave questions or comments at any time on your community's page and the Project Team will provide a response. If the WSR Project Team has not yet hosted a virtual information session for your community, you can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 18, 2022

Dear Chief Benson,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps.

We will be offering a community information session, via Zoom, on **Tuesday, August 2 between 12pm and 1:30pm** for North Caribou Lake First Nation, where there will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 1.5 hours in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://maverickav.zoom.us/meeting/register/tZIkdu-qqjsjE9SZbuf9MVEwru7XvisD-RKE.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: Meeting ID: 869 1624 0990 & Passcode: 226511.

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/northcariboulake/.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Lead
Webequie Supply Road

July 26, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Socio-Economic Primary Data Collection Program

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socioeconomic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. You can find more information regarding the program on the WSR website: https://www.supplyroad.ca/ik-and-socio-economic/

We would like to invite your community to participate in the WSR socio-economic primary data collection program. To express your community's interest or if you have any questions regarding the socio-economic primary data collection program for the WSR Project, please feel free to contact Marian Tibor-McMahon at 416-668-3298 or marian@indigenousengagement.ca.

At any time, you can access additional information on the WSR website: **supplyroad.ca.** You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

The WSR Project also has a YouTube channel where we post informational videos, past livestreams and radio shows, and communication materials. Please visit:

August 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Consultation Round 2

Throughout the EA/IA phase, the Project Team conducts studies to gather information on a wide range of topics and consults with Indigenous communities, members of the public, and other stakeholders, to evaluate the Project and its potential effects. This month we are concluding our Consultation Round 1 and will be moving into Round 2, before the final Round 3.

We encourage community members to watch their information session at **supplyroad.ca/sessions/** where you can find your community-specific page.

Consultation Round 2 will focus on the following topics:

- Summary of input received from Consultation Round 1
- Identification and evaluation of alternatives
- Preliminary recommended preferred route and supportive infrastructure (aggregate/rock source areas, construction camps, access roads), including rationale for selection
- Preliminary engineering design elements of WSR (bridges/culverts)
- Next steps and schedule

Stay tuned with the WSR Project by following our social media channels:

October 07, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations - Caribou.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **October 11th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**
You can also stay tuned with the WSR Project by following our social media channels:

Re: Round 1 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Benson:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report (electronic and hard copy), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);

- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 2 for the Project from Winter 2023 to Summer 2023. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 1;
- Identification and evaluation of alternatives (routes, aggregate source areas, etc.,);
- Preliminary recommended preferred route and supportive infrastructure (aggregate/ rock source areas, construction camps, access roads), including rationale for selection;
- Preliminary engineering design elements of WSR (bridges/culverts); and,
- Next steps and schedule.

We welcome any feedback and input your community may have on the attached Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

November 2, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week featuring our special guest storyteller/comedian Ron Kanutski. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations – Fish and Fish Habitat.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 8th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

November 17, 2022

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Biweekly Radio and Livestreaming Series is Back

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Building Roads in Muskeg Areas/James Bay Lowlands.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **Tuesday, November 22nd, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.

Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Other Ways to Stay Up To Date

You can also stay tuned with the WSR Project by following our social media channels:

WSR
WEBEQUIE
SUPPLY ROAD

December 14, 2022

Chief Cornelius Benson
North Caribou Lake First Nation
General Delivery
Weagamow, ON
P0T 3B0

Dear Chief Benson:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 14, 2022, the package status indicates that it has been successfully delivered to your community on November 7, 2022.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

We welcome any feedback and input your community may have on the Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

WSR
WEBEQUIE
SUPPLY ROAD

January 27, 2023

Chief Cornelius Benson
North Caribou Lake First Nation
General Delivery via Pickle Lake
Summer Beaver, ON
P0L 1A0

Dear Chief Benson:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, January 27, 2023, the package status indicates that it has been successfully delivered to your community on November 7, 2022.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

We welcome any feedback and input your community may have on the Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Radio Show and Livestream Series

The WSR Project team will be resuming the radio show and livestreaming series in the coming weeks. Stay tuned for more information.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and

we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Thank you very much and we look forward to hearing from you soon.

March 9, 2023

Dear Chief,

Radio Show and Livestream

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: The Alternatives Assessment Process – An Overview.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on March 14th, 2023 at 12:00pm - 1:00 pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team will begin virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Benson,

We hope that this letter finds you and your community well.

As you know from our previous correspondence, Webequie First Nation is the proponent of the Webequie Supply Road Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities.

Today, we are writing to confirm whether your community has an interest in participating in the Socio-Economic Primary Data Collection Program and is follow-up to the invitation letter sent to you on December 20, 2021. In this letter, we outlined the purpose of the socio-economic study, types of information we would like to gather and suggested primary data collection methods (e.g., community surveys, focus groups, key informant interviews). Primary data is information collected first-hand directly with community members about issues and conditions of the community.

We have a timeframe for the EA/IA process to complete our studies and document the results. Our goal this year is to complete a draft Socio-Economic Existing Conditions Report, which documents the socio-economic baseline conditions of communities. We would like to collaborate with your community to discuss and collect socio-economic information and/or verify information gathered to-date based on current desktop research to help us to understand existing social and economic conditions.

The preliminary “Valued Components” for the EA/IA, which represent aspects of social and economic conditions that are important to you and the community, and require information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;

- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

In order to meet the schedule for the completion of the EA/IA study, we respectfully request an indication of your community's interest in participating in the Socio-Economic Primary Data Collection Program by **April 17, 2023**, as it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by **June 16, 2023.**

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Heather Swan, Deputy Project Manager
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Michael Fox, Regional Consultation Coordinator, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

March 22, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Alternatives Routing in the Preferred Corridor.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, March 28th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

May 9, 2023

Dear Chief Benson,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Tuesday, May 23rd from 12:00pm-1:00pm EST** for North Caribou Lake First Nation, where there will be a presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/82881828640

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 828 8182 8640**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/northcariboulake/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

At any time, you can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

WSR240-WEB-PR-LT-0526 Web-WSR Letter Re Virtual Community Info Session NCLFN-2023-05-09

Michael Fox

Craig Wallace, Project Manager, SNC-Lavalin Inc.

May 17, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Wednesday, May 24th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

May 24, 2023

Dear Chief,

We would like to provide a **correction to the times** provided on our previous correspondence related to the Webequie Supply Road (WSR) project radio show and livestream happening today.

Radio Show and Livestream
The WSR Project team will be resuming the live streaming and radio call-in show today. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Wednesday, May 24th, 2023 at 6:00pm – 7:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **7:30pm – 8:00pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we apologize for any confusion this may have caused and we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 1, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Criteria and Indicators for Evaluation of Alternatives for Supporting Infrastructure.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Tuesday, June 6th, 2023 at 12:00pm – 1:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **2:00pm – 2:30pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2 Part 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 13, 2023

Dear Chief Benson,

We hope that this letter finds you and your community well.

We are following up on correspondence sent to you on December 13, 2021 regarding the Webequie Supply Road (WSR) Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program. The Project Team also phoned the band office on January 17, 2022, February 24, 2022, April 13, 2022, and sent an email on January 20, 2022 to follow up and advise that the IKLRU Program has started and to confirm if your community is interested in participating.

As you know from our previous correspondence, Webequie First Nation is the proponent of the WSR Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario Environmental Assessment Act and an Impact Assessment (IA) under the federal Impact Assessment Act is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities.

The IKLRU Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

We understand that North Caribou Lake First Nation has been determined ineligible to receive participant funding to participate in the IKLRU Program by the Province of Ontario. Ontario came to this decision based on their initial assessment that your community does not appear to have constitutionally protected Aboriginal and/or treaty rights that may be adversely affected by the proposed WSR Project. However, Ontario remains open to reconsider this decision, if North Caribou Lake First Nation can provide information available within the community as it relates to any Aboriginal and/or treaty rights that may be affected in the area near the proposed WSR Project.

We encourage you to contact Ontario if you wish to have your eligibility to receive participant funding reconsidered. Please let us know if there is any way we can offer our support throughout this process.

Today, we are writing to confirm whether your community has an interest in participating in the IKLRU Program. Our Project Team is available to discuss how your community can participate with capacity funding provided to lead a study that will help to document how your Aboriginal & Treaty rights could be impacted by the WSR Project.

We want to learn more about your community from your perspective on a range of topics, including:

- Community history
- Community values, beliefs, aspirations and challenges
- Cultural and spiritual connections with the land
- Traditional land and resource use in the region
- Exercise of inherent Indigenous and treaty rights

By documenting Indigenous knowledge and land and resource use information as part of the EA/IA, it may assist your community in understanding your Aboriginal and treaty rights and interests, and ensuring they are protected.

We have a timeframe for the EA/IA process, to complete our studies and document the results. Our goal this year is to complete a draft baseline conditions report, which documents the existing conditions of communities and the environment. We want to work closely with you, to add your community's knowledge to the report.

Some communities may have documented this type of information as part of a community-based land use planning process. This information would be very useful to review with your community, either in a meeting, or to share any documentation with the Project Team, under the condition of confidentiality and non-disclosure to any other Party.

In order to make progress towards the completion of the EA/IA process, we respectively request an indication of your interest in participating in the IKLRU Program by the end of June 2023.

All knowledge that is shared will be safeguarded with a formal Confidentiality and Data Sharing Agreement, which will ensure that all input from the community will remain the ownership of the community, and that no information will be shared beyond the Project Team, without the consent of the community.

As the proponent, Webequie First Nation bears the responsibility for the Project and the assessment processes being applied to it. Like your community, we are traditional stewards of the land, and we must make certain that any development in the area is undertaken properly, and that the rights, interests, values, traditions, concerns, and aspirations of fellow communities are appropriately addressed within the assessment

context, during the life of the Project, and beyond. It is in this spirit that we are reaching out to collaborate with us.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,
Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 14, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Aggregate / Rock Source Areas.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, June 20th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 28, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Construction Camps.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Wednesday, July 5th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.
On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 12, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream
The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Road Foundation Design.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, July 18th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

July 19, 2023

Dear Chief Benson,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Tuesday, August 1st, between 12:00pm-1:00pm EST** for North Caribou Lake First Nation, where there will be a second part of the presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/85459380555

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 854 5938 0555**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/northcariboulake/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 26, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has been conducting virtual information sessions for each community with the second part of the presentation for Consultation Round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

November 8, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience and in any method that you and your community prefer.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time, some communities may not wish to participate in the form of in-person meetings and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person engagement methods. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Public Information Center #2

The WSR Project team held Public Information Center (PIC) #2 in Thunder Bay on October 3rd for Indigenous communities & 4th for the general public and Timmins on October 12th for the general public. The PIC's were held to provide interested parties with an opportunity to learn about the ongoing assessment of alternatives that is being conducted as part of the EA/IA study and provide feedback. The PIC consisted of a presentation and an informal drop-in center with display information about the Project. Project team representatives shared information on the EA/IA process, studies being conducted, criteria for evaluation of route alternatives and alternative locations for supportive infrastructure (e.g., aggregate source areas, construction camps), including results from the assessment, the feedback we have heard to date, and future consultation and engagement opportunities.

If you were unable to attend the PIC #2, you can find the formal notice, livestream, more information on the study and progress, and updates on our project website: https://www.supplyroad.ca/

Aboriginal and/or Treaty Rights and Interests Forum

Building on the momentum of the first Aboriginal and / or Treaty Rights and Interests Forum in February 2023, Webequie First Nation and Marten Falls First Nation encourage you to participate in a follow-up Forum on November 21-23, 2023 at the Valhalla Inn in Thunder Bay, to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link, and Marten Falls Community Access Roads Projects.

The Purpose of this Forum is to create a respectful, culturally sensitive, and collaborative space to develop and/or confirm our understanding of the Project areas (WSR, MFCAR, and NRL) as your Aboriginal and / or Treaty Rights and Interests may be impacts by these Projects. Please note the purpose of this event is to discuss Aboriginal and / or Treaty Rights and Interests and not to collect Indigenous Knowledge.

If you have any questions regarding the Forum or need additional information to engage your community, please do not hesitate to reach out to us at the contacts below.

Stay Up to Date

You can also stay tuned with the WSR Project by following our social media channels:

January 25, 2024

Chief Cornelius Benson
North Caribou Lake First Nation
General Delivery
Weagamow, ON P0T 3B0

Re: Round 2 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Benson:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR or the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report 2 (electronic and hard copy), which summarizes and documents Round 2 of the Engagement and Consultation Program with your community for your review and comment.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1;
- Overview of results of baseline studies to characterize existing conditions within the study area;

- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/ rock source areas, construction camps, access roads) from multifactor analysis, including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design); and
- Next steps and schedule.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report 2, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 2;
- Summary of preliminary effects assessment of the Project, including cumulative effects;
- Proposed impact management, mitigation and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the attached Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

Regional Consultation Lead
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, AtkinsRéalis Canada Inc.

2

January 31, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week with changes to the order of topics that was provided on the January 2024 newsletter. See below the updated schedule of topics for February 2024:

Date	Topic
Monday, February 5, 2024	Road Access and Control Issues
Monday, February 12, 2024	Minimizing Project Impacts
Tuesday, February 20, 2024	Construction Camps and Other Opportunities
Monday, February 26, 2024	Bridges and Water Crossings

The topic of the upcoming session is: **WSR Presents: Road Access and Control Issues.**

The livestreaming event is scheduled for **February 5th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date

Chief Cornelius Benson
North Caribou Lake First Nation
General Delivery
Weagamow, ON
P0T 3B0

Dear Chief Benson,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, February 15, 2024, the package status indicates it has been delivered to your community on February 1, 2024.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Construction Camps and Other Project Opportunities.**

The livestreaming event is scheduled for **February 20th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet

with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. March 6, 2024

Chief Cornelius Benson
North Caribou Lake First Nation
General Delivery
Weagamow, ON
P0T 3B0

Dear Chief Benson,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, March 6, 2024, the package status indicates it was delivered to your community on February 1, 2024.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: The Results of the Caribou Study.**

The livestreaming event is scheduled for **March 11th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek

input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local

	translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Lead

DRAFT

1. Project Context

The proposed Webequie Supply Road (WSR, or 'the Project') is a proposed new all-season road approximately 107 kilometres (km) in length from the Webequie First Nation Reserve to the mineral deposit area near McFaulds Lake (also referred to as the Ring of Fire). The Project location is shown on Figure 1-1. The preliminary corridor for the road consists of a northwest-southeast segment running 51 km from the Webequie First Nation Reserve to a 56 km segment running east-west before terminating near McFaulds Lake. A total of 17 km of the corridor is within the Webequie First Nation Reserve.

The information provided in this document is preliminary at this time, and it has been prepared with information that is known specifically for North Caribou Lake First Nation. This is a living draft document that has yet to be reviewed and validated by the Community.

Webequie First Nation is the proponent for the Project. The Project Team led by Webequie First Nation is striving to gather as much Anishinaabemowin (Oji-Cree), Anishinaabe (Ojibway), Mushkegowuk (Cree) and Métis Indigenous Knowledge as it relates to the Project and to help inform the socio-economic baseline. This document will be continuously updated when information from the North Caribou Lake First Nation and other communities is shared with the Project Team.

The gathering of important Indigenous Knowledge takes time due to the limited resources and capacities of communities. It is also important that culturally relevant protocols are followed. This requires relationship building and consistency to establish trust.

Webequie is an Anishinaabemowin Tawin (community) located in Treaty No. 9 territory, about 540 km north of the City of Thunder Bay. Anishinaabemowin is a blend of Anishinaabe and Mushkegowuk.

Before the first settlers arrived, the Anishinaabe and Mushkegowuk sustainably shared the territory and lived Mino Bimaadzwin (the good life) through guidance from Anishinaabe law, which governs their Kii'manitu'meano-goonan (Creator given) responsibilities to assure a good relationship with the Land (Webequie First Nation, 2021).

Generally, the Anishinaabe and Mushkegowuk shared a common spiritual view with Indigenous Nations across the continent, that is based on a profound respect for Shkagamik-Kwe (Mother Earth), which was also a relationship based on reciprocity (Thomas, 2020; Helin, 2008).

As the proponent for the Project, Webequie First Nation, like many Indigenous Nations and communities across Turtle Island (North America) have been living with the effects of colonial impositions since the arrival of Europeans to the continent and the formation of Canada. The impositions, spanning more than seven generations have had a reverberating impact on the Anishinaabemowin. These impacts should be understood while considering 'baseline' socio-economic data because Webequie First Nation, the proponent for the Project, has been striving for Mino Bimaadzwin and to strengthen their Nation in a holistic way while reclaiming culture which feeds into baseline data as well as Aboriginal and Treaty Rights and Interests.

Before settlers arrived, Indigenous Nations governed themselves through their own governance structures and Natural laws. Anishinabek and Mushkegowuk governed themselves through a clan-style system, as shown on Figure 1-2. Typically, the Anishinabek govern themselves through a clan-system which includes seven main clans with many sub-clans. Each clan has different responsibilities within the Nation at large.

Figure 1-2: Representation of the Anishinabek Dodemag (the "Clan System")

Source: Atikameksheng Anishnawbek, 2023.

Colonial impacts have been devastating in Anishinaabe and Mushkegowuk Homelands. Before the Hudson Bay Company (HBC) exploited fur-bearing animals to support trade in Europe, the people lived sustainably with the land. Fur-bearing animals were hunted to near extinction, with the beaver population having been nearly decimated, which resulted in starvation for the people living in their homelands (SNC-Lavalin, 2022). Before that time, Anishinabek had never before been subject to a commerce style economy (SNC-Lavalin, 2022).

The *Indian Act*, implemented in 1876 had an adverse impact on Indigenous Peoples across Canada. Perhaps the most harm was done while Indigenous children were forced to attend Indian Residential Schools, which were either government run, or church run institutions.

A timeline has been developed to better understand the effects of legislation, encroachment on rights as well as reconciliation efforts, as shown in Table 1-1.

DRAFT

Table 1-1: Timeline of Effects on Indigenous Peoples of Canada from Legislation, Encroachment on Rights and Reconciliation Efforts

Timeline	Effects
Hudson Bay Company, 1670	HBC officially established itself in 1670 to set up trade for the fur industry (primarily beaver pelts). HBC set up its first official post in 1673 in Moose Factory, near the southern hub of James Bay and subsequently built a small outpost along the Albany River in 1743. The exploitation of animals for fur in the region resulted in a starvation crisis for the Anishinaabe and Mushkegowuk. It took the beaver population a considerable time to recover (SNC-Lavalin, 2022).
British North America Act, 1867	The *British North America Act* made the federal government responsible for Indigenous Peoples (Government of Canada, 2011).
Royal Proclamation, 1763	The Royal Proclamation of 1763 established the constitutional basis for future negotiations of treaties and confirmed the protection of lands for the exclusive use by Indigenous Peoples (Hall, 2019).
Indian Act, 1876	The *Indian Act*: Imposed the Reserve system 1876 – ongoing. Forced attendance at Indian Residential Schools 1894 – 1996. Outlawed ceremonies: 1876 – 1951. Oppressed women's rights: 1876 – ongoing. Imposed the band council system 1876 – ongoing. 60's Scoop – Gave provinces jurisdiction to 'scoop' Indigenous children from their homes. There have been class action lawsuits to address the loss of culture and identity.
James Bay Treaty (Treaty No. 9), 1905	The James Bay Treaty (No.9) was signed with Anishinaabe, Mushkegowuk, and Anishinaabemowin. Indigenous Peoples in the territory wanted protections for lands, resources and fur-bearing animals.
The Mines Act, 1906	The *Mines Act* established claims staking procedures and prospectors' licenses providing exclusive rights to stake claims and work upon Crown lands.
Ontario Registered Trapline System, 1946	Imposed sole ownership of trapping areas, which did not align with cultural values (SNC-Lavalin, 2022).
Royal Commission on Aboriginal Peoples (RCAP), 1996	RCAP was mandated to investigate and propose solutions to the challenges affecting the relationship between Aboriginal Peoples, the Canadian government, and Canadian Society.
Truth and Reconciliation Commission of Canada (TRC), 2015	Final Report, Calls to Action, Indian Residential School settlement agreement (Truth and Reconciliation Commission of Canada, 2015).
National Inquiry into Missing and Murdered Indigenous Women and Girls, 2019	Reclaiming Power and Place: The Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls (MMIWG, 2019).

It is important to tell the story of Indigenous Nations in order to understand their current socio-economic conditions and Indigenous Knowledge. Part of that story includes not only the history of the Indigenous Nations, but also that of Indigenous Peoples in Canada.

DRAFT

COMMUNITY SETTING

DRAFT

AtkinsRéalis - Confidential

2. Community Setting

2.1 Community Overview

Indigenous communities in the Local Study Area (LSA) and Regional Study Area (RSA) for the WSR socio-economic baseline are Anishiniimowin, Anishinaabe and Mushkeego First Nations, and Métis Peoples. First Nations have traditional territories that cover the lands in the study areas. A number of First Nations in the RSA are located north of the provincial highway system, and are accessible only by air, water and winter road. Other First Nations, and the Métis community, located further south, are generally serviced by the provincial highway system. All First Nations communities are located within the Treaty No. 9 territory, except for Long Lake #58 First Nation, which lies within the geographic boundaries of the Robinson-Superior Treaty of 1850.

North Caribou Lake First Nation is located 530 km north of Thunder Bay and 265 km northwest of Webequie First Nation. It is situated on the northern shore of Weagamow or Round Lake and is accessible year around by the all-season Northern Resource Trail from Pickle Lake.

North Caribou Lake First Nation falls within the census District of Kenora.

The community is formally affiliated with Windigo First Nations Management (MFNM), a registered not-for-profit Tribal Council (Windigo First Nations Council, 2023), and the Nishnawbe Aski Nation provincial territorial organization.

North Caribou Lake First Nation has a Chief, Head Councillor and six Councillors, with a custom electoral system. The most recent election was held on February 23, 2024 (CIRNAC, 2023r).

2.2 Community History

North Caribou Lake First Nation, also known as Weagamow Lake First Nation, or Round Lake, historically moved around to exploit seasonal resources (Gordon, 1983). The community has used a series of “home base camps” along the shores of Meagamow Lake and North Caribou Lake to the east, as well as temporary “satellite camps” (Gordon, 1983). In 1910, an Anglican church was built at the location where North Caribou Lake First Nation would meet every summer – Atikup Point (Gordon, 1983). Atikup is the Cree word for “caribou lake.” There is evidence that there was an early Northwest Company settlement at North Caribou Lake around 1809 (Gordon, 1983). When Treaty No. 9 was signed, the people of North Caribou Lake, Weagomow Lake and Windigo Lake were joined together as the Caribou Lake Band (Gordon, 1983). In the late 1930's, a Hudson's Bay Company outpost was built on North Caribou Lake. As the railway was built, the role of the Albany River as a major supply route was eliminated (Gordon, 1983). By the late 1930's, ‘camp trade’ was carried on at North Caribou Lake with goods supplied by air from another post.

2.3 Community Values and Aspirations

In 2015, North Caribou Lake First Nation entered into a Memorandum of Understanding (MoU) with Romios Gold Resources Inc. (Burega, 2015). In 2017, an all-season road and bridge was built, connecting North Caribou Lake First Nation to the provincial highway system at Pickle Lake. The development of this reliable and safe infrastructure ended the community's reliance on air services and the unreliable winter road network.

North Caribou Lake First Nation is also part of a formal agreement with Newmont Musselwhite Mine that includes revenue sharing, employment, training and business development opportunities (Thunder Bay Community Economic Development Commission, N.D).

DRAFT

In September 2023, North Caribou Lake First Nation and Wataynikaneyap Power celebrated the connection of the community to the provincial electricity system as part of the Wataynikaneyap Power project. Since the community was connected to the grid, it has connected a new school, police unit and several housing units to electricity and ended reliance on diesel generated power (Wataynikaneyap Power, 2023).

DRAFT

SOCIAL ENVIRONMENT

DRAFT

AtkinsRéalis - Confidential

3. Social Environment

3.1 Population and Demographics

Population and demographic data are important tools used to assess socio-economic conditions in communities, as these data can also be used to identify vulnerable groups such as women, disabled persons, Elders and youth. These are segments of the population that could either benefit or be negatively impacted (directly or indirectly) by the Project, and often experience barriers to participation as under-represented groups. Population and demographics are described in this section using the following indicators using Census data:

- Population overview, including gender and age;
- Indigenous identity (according to Census categories, First Nation, Métis, Inuit or non-Indigenous);
- Languages;
- Mobility and migration; and
- Immigration data is unavailable.

These indicators provide insights into existing socio-economic conditions where the Project is being considered. The information is to be used in the assessment of potential effects of the Project and to develop strategies to mitigate any negative effects.

The following section provides an overview of population and demographics at a district level.

3.1.1 Population Overview

The Kenora District population is projected to experience slight growth over the projection period (2021 to 2043), increasing from 66,000 in 2021 to 68,095 by 2043. Nearly half of the Kenora District population identifies as either First Nation, Métis, or Inuk. English is spoken in nearly all homes and there is a small percentage of in-migration to the District.

Table 3-1 presents the forecasted population in the Kenora District over the projection period broken down by self-identified gender. Population trends by self-identified gender in Kenora District are summarized as follows:

- Over the projection period both female population and accompanying male population are forecast to increase
- Between 2016 and 2043 the male population is forecast to increase from 32,895 to 35,716, an 8.6% increase.
- Between 2016 and 2043 the female population is forecast to decrease from 32,640 to 32,425, a 0.7% decrease.
- Between 2016 and 2043, the distribution of the male population is forecast to increase from 50.2% to 52.5% and the female population is forecast to decrease from 49.8% to 47.6%.

Table 3-1: Kenora District – Population Forecast by Self-Identified Gender (2016, 2021, 2028, 2033, 2043)

Year	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
2016	65,535	100%	32,895	50.2%	32,640	49.8%
2021	66,000	100%	33,400	50.6%	32,600	49.4%
2028	66,657	100%	34,120	51.2%	32,544	48.8%
2033	67,130	100%	34,644	51.6%	32,504	48.4%
2043	68,086	100%	35,716	52.5%	32,425	47.6%

Source: Statistics Canada, 2017a; 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

DRAFT

Table 3-2 presents the forecasted population in the Kenora District over the projection period by age group. The age groups reported are 0 -14 years, 15 – 64 years, and 65 years and over. The 15 – 64 years age group represents the potential labour force. Population trends by age group in the Kenora District are summarized as follows:

- Between 2016 and 2043, the 0 – 14 years age group is forecast to decrease from 14,440 to 12,527, a 13.2% decrease;
- Between 2016 and 2043, the 15 – 64 years age group is forecast to decrease from 41,820 to 38,152, an 8.8% decrease; and
- Between 2016 and 2043, the 65 years and over age group is forecast to increase from 9,275 to 21,313, a 129.8% increase.

Table 3-2: Kenora District – Population Forecast by Age Group (2016, 2021, 2028, 2033, 2043)

Year	Total		0 to 14 years		15 to 64 years		65 years and over	
	Count	Distribution	Count	Distribution	Count	Distribution	Count	Distribution
2016	65,535	100%	14,440	22%	41,820	64%	9,275	14%
2021	66,000	100%	14,065	21%	41,115	62%	10,820	16%
2028	67,129	100%	13,556	20%	40,148	60%	13,425	20%

3.1.2 Indigenous Identity

Table 3-3 presents the population of the Kenora District by Indigenous identity for 2021. Indigenous identity of the population in the Kenora District population is summarized as follows:

- 50.6% of the population identifies as non-Indigenous.
- The majority of the population that identifies as Indigenous identifies as First Nations at 43.1% of the population, followed by Métis (6.3%). No respondents identified themselves as Inuit.

Table 3-3: Population Forecast by Self-Identified Indigenous Population, Kenora District (2021)

Indigenous Identity	Count	Distribution
First Nations	27,815	43.1%
Métis	4,070	6.3%
Inuit	30	0.1%
Non-Indigenous	32,680	50.6%
Total	**64,595**	**100%**

DRAFT

3.1.3 Languages

Table 3-4 presents the languages spoken most often in the home within the Kenora District in 2021. Languages spoken by the population in Kenora District population in 2021 are summarized as follows:

- The majority of homes in the Kenora District speak English while at home at approximately 94%;
- Indigenous languages are the second most spoken within the home at 5.5%, this category includes 39 Indigenous languages; and
- French and other non-official languages make up the remaining 1.1% of homes at 0.7% and 0.4%, respectively.

Table 3-4: Language Used Most Often at Home, Kenora District (2021)

Language	Count	Distribution
English	59,670	93.5%
Indigenous Languages	3,510	5.5%
Other Non-Official Languages	430	0.7%
French	225	0.4%
Total	**63,835**	**100%**

3.1.4 Mobility and Migration

Table 3-5 below presents the mobility status of Kenora District residents in 2020. Mobility status refers to the status of a person's place of residence on Census Day in relation to their place of residence on the same date one or five years earlier (Statistics Canada, 2022a).

Residents are categorized as "non-movers" or "movers". Persons who, on Census Day, lived in the same residence as they did on the same date one year or five years earlier are referred to as non-movers, and persons who, on Census Day, did not live in the same residence as they did one year, or five years earlier are referred to as movers. Movers include non-migrants, migrants, internal migrants, and external migrants. Mobility status of residents of Kenora District is summarized as follows:

- 90.6% of residents were identified as "non-movers", 50.6% (29,440) of which were male and 49.4% (28,705) female; and
- "Movers" accounted for 9.4% of the population, 48.9% (2,950) of which were male and 51.2 % (3,090) female.

Table 3-5: Mobility Status of Residents, Kenora District (2020)

Mobility Status	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Non-movers	58,140	90.6%	29,440	90.9%	28,705	90.3%
Movers	6,035	9.4%	2,950	9.1%	3,090	9.7%
Total	**64,175**	**100%**	**32,390**	**100%**	**31,795**	**100%**

3.2 Housing and Accommodations

Housing and accommodations are an important issue in particular for Indigenous people. In 2021, it was reported that one in five First Nations people (21.4% or 224,280 people) in Canada consider their household to be crowded (Statistics Canada, 2022a). This problem is primarily due to houses not having enough rooms for families and multiple generation of families living in the same household. Furthermore, many houses on First Nation reserves are in poor condition and require major repairs.

The following sections provide information that will enable the assessment of effects on housing and accommodations by using the following indicators:

- Housing characteristics;
- Household characteristics; and
- Housing condition.

These indicators help with understanding existing socio-economic conditions of the community and predict potential effects of the Project on the community's quality of life.

The following section provides an overview of population and demographics at a district level.

The Kenora District has 32,914 dwellings, 75% of which are occupied by usual residents. The Kenora District has the highest number of dwellings occupied by non-usual residents in the RSA. This is likely due to the high number of cottagers within the region. The majority of the dwellings in the district are owned however the Kenora District has the largest percentage of government or band housing with just over 20% of occupied dwellings falling within this category. Over 60% of dwellings are occupied by 1 to 2 persons. Most of the dwellings in the Kenora District were constructed over 20 years ago, 50% of which were built prior to 1980. Most occupied dwellings are considered suitable for the household size and less than 20% require major repairs.

3.2.1 Housing Characteristics

Figure 3-1 below presents the total private dwellings and private dwellings occupied by usual residents in the Kenora District. Private dwellings occupied by usual residents refers to a private dwelling in which a person or a group of persons is permanently residing (Statistics Canada, 2019). Information on private dwellings in 2021 is summarized as follows:

- There are 32,914 total private dwellings in the Kenora District as of 2021.
- Of the 32,914 private dwellings, 24,818 (75.4%) are occupied by usual residents

DRAFT

Table 3-7 below presents the total number of occupied dwellings for the Kenora District by structure type in 2021. Structure type of occupied dwellings is summarized as follows:

- The majority of dwellings are classified as single-detached home at 81%;
- Apartments make up 10.1% of occupied dwellings. Apartments include the following categories: apartments in a building that has less than five storeys, apartment or flat in a duplex, and apartments in a building that has five or more storeys; and
- The smallest category of occupied dwellings is other single-attached houses with 0.3%.

Table 3-7: Kenora District – Occupied Private Dwellings by Structure Type, 2021

Structural Type	Count	Distribution
Single-detached house	20,100	81%
Semi-detached house	1,745	7%
Row house	915	3.7%
Apartment or flat in duplex	700	2.8%
Apartment in a building that has fewer than five storeys	550	2.2%
Apartment in a building that has five or more storeys	535	2.2%
Other single-attached house	200	0.8%
Moveable dwelling	75	0.3%
Total	**24,820**	**100%**

DRAFT

Table 3- below presents the number of private dwellings by tenure (owned, rented, or government/band housing) for Kenora District in 2021. Tenure of dwellings is summarized as follows:

- The majority of the private dwellings in the Kenora District are owned at 59.8%; and
- Occupied private dwellings which are rented or considered to be provided by the local government or band housing are nearly equal at 19.5% and 20.7% respectively.

Table 3-8: Private Dwellings by Tenure in Kenora District (2021)

Tenure	Count	Distribution
Owner	14,835	59.8%
Renter	4,840	19.5%
Dwelling provided by the local government, First Nation or Indian band	5,140	20.7%
Total	**24,815**	**100%**

3.2.2 Household Characteristics

The following subsections describe characteristics of households (i.e., occupied private dwellings) for Kenora District. Table 3- below presents the total number of households by household size (i.e., the number of people per household) in Kenora District in 2021:

- The majority of households are occupied by two persons at 34%.
- The least number of households are occupied by four persons at 12%.

Table 3-9: Number of Households by Household Size in Kenora District (2021)

Household Size	Count	Distribution
1 person	6,835	28%
2 persons	8,385	34%
3 persons	3,470	14%
4 persons	3,005	12%
5 persons or more	3.130	13%
Total	**24,825**	**100%**

3.2.3 Housing Conditions

The following subsections describe housing conditions including the number of occupied private dwellings built during various periods of construction from 1960 up to 2021, as well as the suitability and condition of dwellings for Kenora District.

Table 3- below presents the total number of occupied private dwellings by period of construction from 1960 up to 2021 in Kenora District:

- Dwellings constructed during the period from 1961 to 1980 is the largest group with 29% of private dwellings being built during this period;
- Dwellings constructed during the period from 2011 to 2015 is the smallest group with 4.3% of private dwellings being built during this period;
- 80.8% of the occupied private dwellings in the Kenora District were constructed during or prior to 2000.
- Over the last two decades, 4,760 dwellings were constructed which comprises less than 20% of the occupied housing stock.

Table 3-11: Occupied Private Dwellings by Period of Construction in Kenora District (2021)

Construction Period	Count	Distribution
1960 or before	5,300	21.4%
1961 to 1980	7,200	29.0%
1981 to 1990	3,770	15.2%
1991 to 2000	3,790	15.3%
2001 to 2005	1,290	5.2%
2006 to 2010	1,170	4.7%
2011 to 2015	1,055	4.3%
2016 to 2021	1,245	5.0%
Total	**24,820**	**100%**

DRAFT

Table 3- below presents the suitability of occupied private dwellings in Kenora District in 2021. Dwellings are categorized as either “suitable” or “unsuitable”. Housing suitability assesses the required number of bedrooms for a household based on the age, sex, and relationships among household members according to the National Occupancy Standard (Statistics Canada, 2017b).

- In 2021, 9.2% of the occupied private dwellings in the Kenora District were categorized as unsuitable.

Table 3-12: Occupied Private Dwellings by Suitability in Kenora District (2021)

Suitability	Count	Distribution
Suitable	22,540	90.8%
Not suitable	2,285	9.2%
Total	**24,825**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3- below presents the conditions of the private dwellings in Kenora District in 2021. Dwellings are categorized as either “only regular maintenance and minor repairs needed” or “major repairs needed”. Dwelling condition refers to whether the dwelling is in need of repairs. This does not include desired remodelling or additions.

The 'regular maintenance needed' category includes dwellings where only regular maintenance such as painting or furnace cleaning is required. The 'minor repairs needed' category includes dwellings needing only minor repairs such as dwellings with missing or loose floor tiles, bricks or shingles, or defective steps, railing or siding. The 'major repairs needed' category includes dwellings needing major repairs such as dwellings with defective plumbing or electrical wiring; and dwellings needing structural repairs to walls, floors or ceilings (Statistics Canada, 2021).

- In 2021, 17.3% of the occupied private dwellings in the Kenora District were categorized as requiring major repairs.

Table 3-13: Occupied Private Dwellings by Dwelling Condition in Kenora District (2021)

Dwelling Condition	Count	Distribution
Only regular maintenance and minor repairs needed	20,535	82.7%
Major repairs needed	4,290	17.3%
Total	**24,825**	**100%**

Source: Statistics Canada, 2022a.

DRAFT

3.3 Community Services

Community services in North Caribou Lake First Nation are described in this section using the following indicators:

- Demand for community services; and
- Supply and capacity of community services.

These indicators were selected to provide an understanding of the community services that currently exist and the community services essential for the community (e.g., health care).

Community Services information for North Caribou Lake First Nation has been collected principally from online sources, such as 211 Ontario North (211north.ca), an information portal which provides information on social, community, health and government services in northern Ontario.

3.3.1 Family Services

3.3.1.1 Family Services

Tikinagan is a social services organization that provides child and family services for North Caribou Lake First Nation. It is the largest provider of residential services in Ontario, with a service area that is approximately one third of the province of Ontario, servicing 30 First Nations communities (Tikinagan Child & Family Services, 2023a). In January 2020, Tikinagan was designated by the Ministry of Community and Social Services and the Band Council to provide child protection services to the families from our communities who reside in the District of Kenora (Tikinagan Child & Family Services, 2023a).

Tikinagan was created to provide culturally specific child and family services, that emphasize Indigenous culture as part of its child welfare support work. This recognizes that previously support services for children and families were generally provided from outside First Nations communities. There were reports of harms inflicted from this approach (Tikinagan Child & Family Services, 2023b).

Services are culturally responsive and supportive of traditional values and customs. The model of “Mamow Obiki-ahwahsoowin” mandates that in all aspects of service delivery, workers are expected to consult with Elders of the community for wisdom, guidance and teachings, and to receive direction on service delivery (Tikinagan Child & Family Services, 2023c). This specifically includes the requirement to consult with First Nations leadership on case management decisions.

An overall goal of the support work by Tikinagan is to keep children at home, and in their home communities. When necessary, foster homes for children in need are located in the child’s community or a nearby community, in order to reduce the distance from home and familiarity.

The Mamow Obiki-ahwahsoowin model mandates that authority rests the Chief and Council to declare that children be placed in Tikinagan care (Tikinagan Child & Family Services, 2023c).

3.3.1.2 Family Well-Being Program

The Family Well-Being Program is a Nishnawbe Aski Nation initiative that provides support to each Indigenous community in designing and delivering their own comprehensive and culturally appropriate services and programs to promote community health and family well-being. The program focuses on empowering families to build healthy relationships and improving the overall health of communities. Its activities and programs include revitalizing Native languages, preventing and intervening in alcohol and drug abuse, organizing community events such as feasts, facilitating family circles, counselling and child/youth support groups, providing referrals to other programs and services, offering school programs, and conducting traditional land-based healing events. The program works towards eliminating family violence, reducing the number of youths involved in the justice system, and decreasing the number of children in care (211 Ontario North, North Caribou Lake First Nation, 2023b).

3.3.2 Child Care and Youth Programs

3.3.2.1 Early Childhood Development

The Early Childhood Development program focuses on improving the health and social development of preschool children and their families in North Caribou Lake First Nation. It is designed to meet the emotional, social, health, nutritional and psychological needs of the child. It offers programs that culturally connect and spiritually root children in the traditional language and history of family, community and Nation. This involves parents, Elders and community members as much as possible.

The program offers a variety of school readiness programs such as learning shapes and numbers, building vocabulary and reading. Additionally, there is supervised indoor and outdoor playtime and gym activities and nutritious snacks ae provided (211 Ontario North, North Caribou Lake First Nation, 2023a).

DRAFT

3.3.2.2 Healthy Babies Healthy Children

The Healthy Babies Healthy Children program supports parenting and promote healthy child development for North Caribou Lake First Nation families with children under 6 years old, as well as Indigenous children at risk. The program provides group information and educational sessions on topics related to healthy pregnancy, birth, and taking care of babies at home. It also offers a handbook on pregnancy and baby care, organizes prenatal classes, and operates a children's library to encourage child literacy. Program participants receive follow-up via telephone within 48 hours of discharge from the hospital and home visits pre- and post-birth to offer support to new mothers and prepare the family for the new arrival. The program also provides home visits during the child's early years to offer development guidance and referrals to other programs and services (211 Ontario North, North Caribou Lake First Nation, 2023c).

3.3.3 Elder Care

Indigenous Services Canada, through the First Nations and Inuit Home and Community Care (FNIHCC) program, provides funding and guidance for Elder care. This program aims to establish home and community care services for Indigenous individuals residing in First Nations and Inuit communities (Indigenous Services Canada, 2023). It encompasses First Nations individuals living on reserves who have been assessed as requiring one or more services.

The FNIHCC program prioritizes various services, including client needs assessment, case management, and care coordination. It also covers in-home respite care, temporary care, nursing care planning, and personal care management. Health centres like the Sioux Lookout First Nations Health Authority play a crucial role in delivering in-community healthcare services (Indigenous Services Canada, 2023).

3.3.4 Health Services

3.3.4.1 Home and Community Care

The Home and Community Care program offers healthcare services to ill, injured, or Elder members of the North Caribou Lake First Nation community who require assistance to stay in their home. This program is available to members of North Caribou Lake First Nation between 30 to 60 years of age and requiring assistance at home due to illness or injury and individuals 60 years of age and over requiring assistance at home. The team assesses the health history of individuals and develops a personalized care plan. The services offered include home care nursing, personal care assistance with tasks such as dressing and bathing, basic or advanced practice foot care, teaching individuals to care for themselves, home support with light housekeeping, laundry, and meal preparation, respite for family members and caregivers, and help with light outdoor/yard work (211 Ontario North, North Caribou Lake First Nation, 2023d).

3.3.4.2 Falls Prevention and Community Elder Exercise Program

Falls prevention classes are provided for older adults and people with mobility issues or chronic conditions. This program aims to improve strength and balance to prevent injury and falls. These classes are taught by a physiotherapist or other regulated health care provider (211 Ontario North, North Caribou Lake First Nation, 2023e).

3.3.4.3 Diabetes Program

The Diabetes Program provides education, prevention, management and treatment services for North Caribou Lake First Nation community members living with diabetes or at risk of developing diabetes. It provides case management and screening services, basic foot care services and referrals to other health care professionals. It works to reduce the number of avoidable complications that can arise from uncontrolled diabetes and helps patients develop and implement an approach to care and management of diabetes. It further assists individuals in finding appropriate services and referrals to other health care professionals (211 Ontario North, North Caribou Lake First Nation, 2023f).

DRAFT

3.3.4.4 Health Services

The North Caribou Lake First Nation Nursing Station focuses on promoting physical and mental health for community members. It coordinates health care services through Nursing staff, two Community Health Representatives and visiting community Physician. It provides health awareness and counselling, education, and prevention workshops especially in the areas of diabetes and alcohol/ drug abuse by coordinating clinics/ workshops in areas that may include Diabetes, Immunization, Sexual Health and Communicable Diseases. It also offers a palliative care program when required.

It takes care of individual health care needs though advocacy on behalf of individual with other health professionals, coordination of one-on-one pre-natal care with the community health nurse and home visits to the sick, Elders, new mothers and persons with health care needs. Further, it offers assistance with coordinating local and long-distance travel arrangements for medical appointments (211 Ontario North, North Caribou Lake First Nation, 2023g).

3.3.4.5 National Native Alcohol and Drug Abuse Program

The National Native Alcohol and Drug Abuse Program provides assistance and support to individuals and families in North Caribou Lake First Nation who are struggling with addiction issues. This program offers Alcoholics Anonymous (AA) and Narcotics Anonymous (NA) meetings and provides transportation to all meetings and workshops upon request. To prevent addiction, the program also holds public seminars and meetings, educational sessions in schools, and coordinates cultural and spiritual events. The intervention program facilitates recreational activities, provides individual and group discussions, and offers cultural and spiritual gatherings. Aftercare is also provided through counseling, sharing circles, and support groups, as well as regular phone calls and home visits, and referrals to band services, social services, detoxification and treatment centres and medical assistance (211 Ontario North, North Caribou Lake First Nation, 2023h).

3.3.4.6 Extended Health Benefits

The Extended Health Benefits program provides a range of health benefits to individuals and families who experience high health costs. Eligibility for the program is determined based on need and is open to members of North Caribou Lake First Nation aged 16 to 65 years. Benefits provided may include basic dental care, diabetic supplies, eyeglasses, hearing aids, prescription drugs, surgical supplies and dressings, as well as transportation for medical appointments. To be eligible, individuals and families must have been eligible for Ontario Works in the previous months or received a payment for loss of income under the 1986-1990 Hepatitis C Settlement Agreement and are no longer eligible for Ontario Works (211 Ontario North, North Caribou Lake First Nation, 2023i).

3.3.4.7 Immunization clinic

The North Caribou Lake First Nation immunization clinic provides inoculations or other measures to prevent North Caribou Lake First Nation community members from contracting specific controllable communicable diseases (211 Ontario North, North Caribou Lake First Nation, 2023j).

3.3.4.8 Suboxone Treatment Program

The Suboxone Treatment Program provides a detoxification program for members of North Caribou Lake First Nation who are struggling with prescription drug abuse and addiction. Operating as a day program, the initiative offers suboxone as a substitute for methadone to minimize the effects of withdrawal. The program includes intake, withdrawal treatment, counselling, and aftercare services. Additionally, the program provides mental health and addiction counselling, as well as referrals to other treatment centres and programs as required (211 Ontario North, North Caribou Lake First Nation, 2023k).

DRAFT

3.3.4.9 Travel Clerk

The Travel Clerk service is responsible for processing Non-Insured Health Service claims for community and Band members. This service submits medical appointment travel, mileage, meal and accommodation requests on behalf of individual. It also assists patients with making travel arrangements and maintains client documentation, receipts and related information (211 Ontario North, North Caribou Lake First Nation, 2023l).

3.3.4.10 Maternal Child Health Program

The Maternal Child Health Program provides services and programs to enhance the lives of pregnant women and families with infants and young children in the community. It offers education and information on topics like fetal alcohol spectrum disorders (FASD) awareness, child nutrition issues, healthy cooking and shopping for families and prenatal nutrition (211 Ontario North, North Caribou Lake First Nation, 2023m).

3.3.4.11 Mental Health Program

The Mental Health Program promotes good mental health and provides services for individuals with mental health and addictions issues in the North Caribou Lake First Nation community. It provides information, services and activities in areas such as addictions, depression, family violence, health promotion and stress management. It provides counselling services, cultural activities, feasts and ceremonies, group workshops, educational sessions that promote wellness and fitness activities. It also undertakes coordination and referrals to psychologist, psychiatrist, other counselling services and treatment centres and aftercare services (211 Ontario North, North Caribou Lake First Nation, 2023n).

3.3.5 Communications Services

3.3.5.1 Ontario Telemedicine Network (OTN)

The OTN offers access to specialized medical care through videoconferencing and tele-diagnostic equipment. It allows remote specialists to examine and prescribe treatments for patients in their home communities. With this service, patients can receive care without having to travel, reducing the need for transportation and potentially improving access to care (211 Ontario North, North Caribou Lake First Nation, 2023g).

3.4 Education and Training Services and Facilities

In the 2015/2016 school year, high-school completion and post-secondary participation rates were higher among non-Indigenous youths in Canada compared to Indigenous youth (Statistics Canada, 2023). However, when comparing First Nation youth living on reserves to First Nation youth living off reserves, those that live off reserves are more likely to receive a high-school diploma, which is most likely due to the lack of accessible high-schools for youth living in remote communities.

This section describes the existing conditions of education and training services and facilities for the North Caribou Lake First Nation using the following indicators:

- Demand for community education and training services;
- Supply and capacity of community education and training services; and
- Learning of traditional knowledge, which includes culture, language, and Natural Laws.

Information on Education and Training Services and Facilities of communities was collected from Statistics Canada, municipal and provincial government websites, and First Nation research studies.

DRAFT

North Caribou First Nation has one school on-reserve – Native Sena School which offers schooling from junior kindergarten to Grade 8 (211 Ontario North, North Caribou Lake First Nation, 2023p). The school provides cultural activities and traditional Oji-Cree language as part of the school curriculum (211 Ontario North, North Caribou Lake First Nation, 2023p). Native Sena School has approximately 145 students. Wahsa Distance Education provides classroom instruction from Sioux Lookout for students who remain on reserve (211 Ontario North, North Caribou Lake First Nation, 2023p). A new school is currently under construction and will be able to host up to 500 students (Government of Canada, 2020).

3.5 Emergency and Protective Services

The socio-economic Baseline includes a description of the following Emergency and Protective Services where information is available within the communities:

- Police;
- Fire; and
- Emergency Medical Services.

Police services in most Indigenous communities in the Nishnawbe Aski territory are provided by Nishnawbe Aski Police Services (NAPS), the Anishinabek Police Service (APS), municipal police services, or the Ontario Provincial Police (OPP). Fire services typically include both volunteer, and community and municipal fire services and departments.

Police services in North Caribou Lake First Nation are administered by the OPP. Emergency medical services in fly-in First Nation communities are limited in nature and tend to be supported by regional service centres. If emergency care is required within the Indigenous communities, patients are typically transported by air ambulance to the larger regional service centres.

Where information is available, community input indicates a general need for additional emergency and protective services to address socio-economic challenges experienced in the Indigenous communities.

3.6 Community Infrastructure

The socio-economic baseline includes a description of the following Community Infrastructure (based on available information):

- Drinking Water;
- Wastewater Plants;
- Electricity Supply; and
- Solid Waste Management.

Existing community infrastructure is limited within the Indigenous communities and generally requires minor to significant upgrades to meet health standards. Community Infrastructure in North Caribou Lake First Nation is described in Table 3-.

Indigenous Services Canada indicates that the water treatment plant is complete, and the long-term drinking water advisory will be lifted in June 2024 (Indigenous Services Canada, 2023).

DRAFT

Table 3-14: Description of Community Infrastructure in North Caribou Lake First Nation

Drinking Water	Wastewater	Electricity Supply	Solid Waste Management
▪ Level 3 Water Treatment System. ▪ Water Quality: fails health and aesthetic guidelines. ▪ Boil water advisory in place since March 2020.	▪ Level 1 Wastewater System. ▪ Constructed in 1997. ▪ Facultative Lagoon. ▪ Effluent Quality does not meet federal guidelines.	▪ Wataynikaneyap Power project connected the community to the electrical grid in September 2023.	▪ Landfill site on reserve.

Sources: Water and Wastewater Information, 2011; Drinking Water Advisories, 2024; Wataynikaneyap Power, 2023; Government of Ontario, 2021; 211 Ontario North, 2021.

3.7 Transportation

The socio-economic baseline includes a description of the following details on transportation where information is available.

- Road Transportation Network;
- Road Traffic Volumes;
- Vehicle Collisions;
- Air Transportation; and
- Waterways.

Communities described in the socio-economic baseline include both Indigenous communities that are fly-in and also those connected to the provincial highway system, as well as municipalities that have well connected transportation systems.

There is an array of multimodal transportation infrastructure available in the region, including the rail network, the provincial highway system, other all-season roads, winter roads, and airports (municipal, remote and international) (IBI Group & Hemson Consulting Ltd, 2016).

Many First Nations communities in the Project study areas are remote and reachable only by air, water or winter roads. Other communities, typically those further south, have access to the provincial highway network.

North Caribou Lake First Nation is accessible via Pickle Lake/ North Caribou Winter Road Corridor. The Northern Ontario Resource Trail (NORT)/ Highway 808 is an all-season road that runs north from Pickle Lake. The North Caribou Winter Road Corridor is one of three winter road systems connecting communities from the NORT. The North Caribou Winter Road Corridor connects with five First Nation communities (MNDM, 2020).

3.7.1 Winter Road Traffic Volumes

North Caribou Lake First Nation does not rely on a winter road for access. The Wa-Pik-Che-Wanoog Bridge opened in 2017 and provides the community with year-round road access to NORT (CBC News, 2017). Air Transportation Network in North Caribou Lake First Nation

Air transport in and out of North Caribou Lake First Nation is provided via North Star Air (North Star Air, 2023).

DRAFT

3.7.2 Waterways in North Caribou Lake First Nation Traditional Territory

Waterways are an integral part of community life. Waterways have been and continue to be an important socio-cultural and economic part of daily life of Indigenous communities. They connect families and friends and provide an important part of the transportation network.

North Caribou Lake First Nation traditional territories are within the secondary watersheds and headwaters of Severn River (Government of Ontario, 2023). Today, the community is situated on the Meagamow Lake, connecting upstream to Windigo Lake, and down stream via the North Caribou River to the Eyapamakama Lake, and North Caribou Lake. Further west is the headwaters of the Winisk River; to the south is Cat Lake and the headwaters of the Albany River (Gordon, 1983). The people of North Caribou Lake First Nation have a long history in the area, as evidenced by archaeology and shared community history of Meagamow Lake and North Caribou Lake (Gordon, 1983).

3.8 Community Well-Being and Safety

3.8.1 Community Well-Being

Community well-being and safety are critical factors in identifying the condition of First Nation communities. Despite improvements in community well-being over the last 35 years, the socio-economic gap between First Nation communities and non-Indigenous communities remains (Statistics Canada, 2019b). Safety is a principal concern among First Nation communities due to historical and intergenerational trauma persisting throughout Canada, and many First Nation members experience racism as a result (Perrault, 2022). The socio-economic baseline provides information that will enable the assessment of effects on community well-being and safety.

This section describes the existing conditions of community well-being and safety using the following indicators:

- Social cohesion and culture;
- Participation in social and/or cultural events;
- Safety; and
- Nuisance.

One comparative measure of community well-being is the Community Well-Being (CWB) Index. The CWB uses four key socio-economic factors (education, income, labour and housing) to measure the well-being of communities across Canada and throughout time. For each community, a score is calculated for each of the four socio-economic factors, as well as an overall well-being score based on a combination of all these factors, which is used to compare well-being among Indigenous communities, and between Indigenous communities and non-Indigenous communities. The data presented in this section are provided by the 2016 Census of Population data (most recent dataset) (Statistics Canada, 2017a). It is important to note that “well-being” means different things to different people and the scores from the CWB are only one aspect in determining the well-being of a community. The four factors used to score the CWB are used as they are important topics that are part of people’s overall “well-being.”

The four socio economic factors used in the scoring of the CWB:

- Education - based on how many community members have at least a high school education and how many have acquired a university degree;
- Labour Force Activity - measures how many community members participate in the labour force and how many labour force participants have jobs;
- Income - calculated based on a community's total income per capita; and
- Housing - based on the number of community members whose homes are in an adequate state of repair and are not overcrowded.

CWB index scores in North Caribou Lake First Nation is described in Table 3-15.

DRAFT

Table 3-15: CWB Index Scores for North Caribou Lake First Nation

Community	Overall	Education	Labour	Income	Housing
First Nations in Canada	58	40	69	54	71
First Nations in Ontario	59	38	72	53	70
North Caribou Lake First Nation	54	26	76	53	61

Source: Indigenous Services Canada, 2019b.

North Caribou Lake First Nation has a low CWB score for education (26), in comparison to First Nations in Canada (40) and First Nations in Ontario (38).

North Caribou Lake First Nation's income score is 53, which is on par with First Nations in Canada (54) and First Nations in Ontario (53).

With a score of 76, the North Caribou Lake First Nation score for labour is comparable to but above those of First Nations in Canada (69) and First Nations in Ontario (72).

North Caribou Lake First Nation has a housing score of 61, which is comparable to but below those of First Nations in Ontario (70) and First Nations in Canada (71).

North Caribou Lake First Nation with a score of 54, for overall community's well-being and safety comparable to but slightly below that of First Nations in Ontario (59) and First Nations in Canada (58).

3.8.2 Safety

According to the Canadian Centre for Justice and Community Safety Statistics, there were 182 police services or detachments responsible for serving Indigenous communities in Canada (i.e., communities where more than half of the residents are Indigenous) (Allen, 2020). These 182 police services had some of the highest crime rates among 1,200 police detachments in Canada, with Indigenous communities having six times higher crime rates than non-Indigenous populations. Ontario had one of the lowest crime rates reported in Indigenous communities (along with British Columbia).

Table 3- provides a generalized summary of regional crime rates based on available information and as reported by the police services in the Regional Study Area. The data are reported as rates of 100,000 people. Some First Nations communities are serviced by the OPP. The OPP is a division of the Ministry of Solicitor General and is the largest police service in Ontario, and second largest police service in Canada (Ontario Provincial Police (OPP), 2023). Part of the OPP's responsibilities for Indigenous communities is to provide administrative support for First Nation Policing programs. The Nishnawbe-Aski Police Service (NAPS) reported the highest rates of crime across categories. NAPS area provides police patrols within northern Ontario and serve 34 First Nation communities (Ketonen, 2023). NAPS often do not have the same resources that other police forces have with limited staff, budget and resources (Thompson, 2017). In 2017, Public Safety Canada outlined that crime rates in First Nations communities were four times higher than the average municipal rate (Thompson, 2017).

Table 3-16: Crime Statistics in Indigenous Communities and Municipalities for 2021, as Reported by the Police Service Responsible for that Area

Municipalities	Total Crime, Rate, 2021*	Total Violent Crime Rate, 2021*	Total Sexual Assault, Rate, Level 1, 2021*	Total Drug Violations, Rate, 2021*
Nishnawbe-Aski Nation, municipal	26,412	9,421	553	649
Anishinabek, municipal	14,567	4,646	193	435
Kenora District, OPP, municipal	12,018	2,838	264	301
Thunder Bay District, OPP, rural	4,358	1,395	155	224
James Bay, OPP, rural	10,911	3,948	202	348

ECONOMIC ENVIRONMENT

DRAFT

AtkinsRéalis - Confidential

4. Economic Environment

4.1 Labour Force and Employment

Indigenous people are underrepresented in Canada's labour market (Anderson, 2019). This section describes the existing conditions of the labour force and employment using the following indicators:

- Labour force characteristics, including employment, age, population, labour force participation, unemployment, barriers to employment, time spent on unpaid domestic work;
- Education and training attainment, including highest certificate, diploma, or degree, field of study, occupations, training opportunities; and
- Labour income, including income, sources of income.

Tradition is an important cultural aspect of Indigenous communities who are very connected to the lands on which they live.

The traditional economy is an important cultural and economic aspect of community life. Unfortunately, traditional economy activities are not widely reported on and therefore it is difficult to quantify the economic impact they have within the communities. This is the case for North Caribou Lake First Nation.

The following section provides an overview of population and demographics at a district level.

The working age population in the Kenora District is projected to decline over the projection period from 41,115 in 2021 to 38,152 by 2043 (Statistics Canada, 2017; 2022a). The unemployment rate within the District is lower than Ontario at just under 9%, however, the participation rate is 57% in comparison to 63% for Ontario (Statistics Canada, 2022a).

The Kenora District population has the lowest percentage of population with postsecondary certificate, diploma or degree in the RSA at 40% (Statistics Canada, 2022a).

Over half of the population who pursued postsecondary education studied either architecture, engineering, and related trades, health and related field, or business, management, and public administration (Statistics Canada, 2022a).

DRAFT

4.1.1 Labour Force Characteristics

Table 4-1 present the forecasted working age population in Kenora District over the projection period: 2016, 2021, 2028, 2033, and 2043. The values for 2016 and 2021 are published statistics from the 2016 and 2021 Statistics Canada Census of Population (Statistics Canada, 2017, 2022a). The values for 2028, 2023, and 2043 were forecasted based on the 2016 and 2021 data. The working age population is defined as those aged 15 to 64. Projected trends of working age population in Kenora District are summarized as follows:

- The working age population is decreasing over the projection period; and
- Based on current growth trends, the working age population is forecasted to decrease by 3,668 between 2016 and 2043, a decline of approximately 8.8%.

Table 4-1: Projected Working Age Population in Kenora District (2016, 2021, 2028, 2033, 2043)

Year	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
2016	41,820	100%	21,040	50.3%	20,775	49.7%
2021	41,115	100%	20,860	50.7%	20,255	49.3%
2028	40,148	100%	20,611	51.3%	19,549	48.7%
2033	39,471	100%	20,434	51.8%	19,059	48.3%
2043	38,152	100%	20,086	52.6%	18,117	47.5%

Source: Statistics Canada, 2017; 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-2 present the breakdown of the population in the labour force and those not in the labour force for Kenora District in 2021.

Table 4-2: Labour Force Participation in in Kenora District (2021)

Labour Force Participation	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
In the labour force	29,245	100%	15,300	52.3%	13,950	47.7%
Not in the labour force	21,750	100%	10,345	47.6%	11,405	52.4%
Total	**29,245**	**100%**	**15,300**	**52.3%**	**13,950**	**47.7%**

DRAFT

Table 4-4 presents the number of jobs by 1-digit NOC[1] code for 2018 and 2022 in the Kenora District.

- Sales and service occupations is the leading job category in the Kenora District with 6,884 jobs in 2022 which accounts for 21.6% of the total jobs;
- The Kenora District has seen an increase in 7 occupational categories between 2018 and 2022 with an overall increase in jobs of 6% over the 4 years; and
- The occupational category with the largest percentage increase over the period was natural resources, agriculture, and related production occupations with a 15% increase.

Table 4-4: Kenora District – Occupations by Category (2018 – 2022)

Occupation Categories	2018 Jobs	2022 Jobs	2018 – 2022 Change	2018 – 2022 % Change
Business, finance and administration occupations	4,861	5,301	440	9%

DRAFT

4.1.2 Education and Training Attainment

There is high value placed on principles and teachings passed down by Elders and knowledge Keepers. These teachings take place in community and out on the Land.

The Knowledge passed on from the ancestors sustain North Caribou Lake identity and way of life.

Table 4-5 presents the highest level of western educational attainment for the population aged 15 years and over in private household in the Kenora District for 2021.

- The majority of the population has a postsecondary certificate, diploma, or degree at 40.1%, within this group females are more likely to have a degree in comparison to males; and
- 30.9% of the population was no certificate, diploma, or degree at 30.9%. Males account for 52.9% of this group and females 47.1%.

[1] The National Occupational Classification (NOC) is Canada's national system to identify and categorize occupations based on the training, education, experience and responsibilities they require. The structure of NOC codes is hierarchical with five levels. The first level (1-digit) contains 10 broad occupational categories, the second level (2-digit) is made up of 45 major groups, the third level (3-digit) consists of 89 sub-major groups, the fourth level (4-digit) gathers 162 minor groups, and the last level (5-digit) comprises 516 unit groups.

Table 4-5: Highest Certificate, Diploma or Degree for the Population Aged 15 Years and Over in Private Households in Kenora District (2021)

Highest Level of Education	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
No certificate, diploma or degree	15,750	30.9%	8,330	32.5%	7,420	29.3%
High (secondary) school diploma or equivalency certificate	14,800	29.0%	7,595	29.6%	7,205	28.4%
Postsecondary certificate, diploma or degree	20,440	40.1%	9,715	37.9%	10,725	42.3%
Total	**50,990**	**100%**	**25,640**	**100%**	**25,350**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-6 presents the major fields of study for the Kenora District population aged 15 and over who had obtained a postsecondary education as of 2021.

- The most common fields of study pursued by Kenora District residents were architecture, engineering, and related trades which includes but is not limited to construction trades, precision production, mechanic and repair technology, engineering, and historic preservation and conservation; and
- The major fields of study pursued by Kenora District residents include education, humanities, architecture, engineering, and related trades, and personal, protective, and transportation services.

Table 4-6: Major Field of Study for the Population Aged 15 Years and Over in Private Households in Kenora District (2021)

DRAFT

4.1.3 Labour Income

Table 4-7 present the total individual income by group for the population aged 15 and over for 2020 in Kenora District by self-identified gender.

- The largest individual income group for both male and female is $20,000 to $29,999;
- The smallest individual income group for both male and female is $150,000 and over with 3% and 1.1%, respectively;
- In 2020, there were 95 more females than males with individual incomes; and
- In 2020, 74% of females were making under $60,000 while only 65% of males were within this group.

Table 4-7: Total Individual Income by Group for the Population Aged 15 Years and Over in Private Households in Kenora District (2020)

Income Group	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Under $10,000 (including loss)	5,285	11.0%	2,885	12.1%	2,400	10.0%
$10,000 to $19,999	5,900	12.3%	2,580	10.8%	3,320	13.9%
$20,000 to $29,999	6,515	13.6%	2,860	12.0%	3,655	15.3%
$30,000 to $39,999	5,630	11.8%	2,590	10.9%	3,045	12.7%
$40,000 to $49,999	5,245	11.0%	2,395	10.0%	2,845	11.9%

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-8 present the total household income for private households in 2020 in Kenora District.

- The majority of households have an income level between $100,000 to $124,999 at 11.8%;
- The smallest household income group is $5,000 to $9,999 at 0.7%; and
- Approximately 50% of households bring in under $80,000 while the other half bring in over $80,000.

DRAFT

4.2 Overall Economy

Existing conditions of the overall economy in Kenora District are described in this section using the following indicators:

- Gross Domestic Product (GDP);
- Cost of living;
- Economic development, including economic development initiatives, capacity, gaps, major projects, new projects, closures, equipment availability, energy profile, access to capital and trends;
- Traditional economy; and
- Access, ownership, and use of lands, including municipal zoning, land area, land-use planning documents from MNRF (Ministry of Natural Resources and Forestry), Indigenous communities and municipalities (if relevant), plans for land development, compatibility with existing and proposed land uses.

4.2.1 Gross Domestic Product

GDP is a monetary measure of the market value of all the final goods and services produced and sold in a specific time period, typically expressed annually, within a specified geographical region. This section describes the GDP, including the annual GDP and changes in GDP for the Kenora District. The information provided in this section will help identify potential effects of the Project on GDP.

Table 4-9 presents the GDP for the Kenora District for 2006 and 2016 (Northern Policy Institute, 2019a).

- Between 2006 and 2016 there was a decline in GDP of just over 10%;
- These trends reflect changes in the size and occupational distribution of employment in the district; and
- The Kenora District represents 0.2% of Ontario's GDP in 2016.

Table 4-9: GDP for Kenora District (2006 – 2016) (Expressed in millions of dollars)

Year	2006	2016	2006 – 2016 Growth	2006 – 2016 % Change
GDP	2,309	2,077	-232	-10.1%

Source: Northern Policy Institute, 2019b.

4.2.2 Cost of Living

The largest census subdivision within the Kenora District is the City of Kenora, which accounts for approximately 23% of the population. Table 4-10 presents a comparison of shelter affordability between the City of Kenora and Ontario. Both shelter costs and the cost of purchasing a house in Kenora are significantly less than the provincial averages (Choose Kenora, 2023).

Table 4-10: Shelter Costs and Dwelling Values, City of Kenora vs Ontario, 2016

	Owned – Kenora	Rented Kenora	Owned – Ontario	Rented – Ontario
Median shelter cost	$1,002	$882	$1,299	$1,045
Average shelter cost	$1,155	$873	$1,463	$1,109
Median dwelling value	$225,210	-	$400,496	-
Average dwelling value	$260,789	-	$506,409	-

Source: Choose Kenora, 2023.

Table 4-11 present the number of households spending 30% or more of income on shelter costs for Kenora District in 2021. According to the Canada Mortgage and Housing Corporation (CMHC) housing is considered to be affordable when a household spends less than 30% of its pre-tax income on adequate shelter. Households that spend more than 30% of their income on shelter are deemed to be in core housing need (Canada Mortgage and Housing Corporation, 2020).

Of the nearly 19,000 owner or tenant occupied dwellings in the Kenora District, 13% are spending more than 30% of their income on shelter costs (Statistics Canada, 2022a).

Table 4-11: Distribution of Households Spending 30% or More of Income on Shelter Costs for Kenora District (2021)

Household Spending on Shelter Costs	Count	Distribution
Spending less than 30% of income on shelter costs	16,490	87%
Spending 30% or more of income on shelter costs	2,455	13%
Total Owner and Tenant Households	**18,945**	**100%**

Services and may end up having to stay in urban centres longer than planned (Nishnawbe Aski Nation, 2022).

DRAFT

4.2.3 Economic Development

The Kenora District is a census division in Northwestern Ontario. It is comprised of 57 census subdivisions, 47 of which are First Nation communities. Combined, the City of Kenora, the City of Dryden, and the Municipality of Sioux Lookout make up 43% of the District's population.

Kenora District's economy is supported by several key sectors, including manufacturing, health care, public administration, forestry, mining services, culture and recreation, construction, and tourism.

The City of Kenora 5-year Tourism and Economic Development Strategy sets out three goals: tourism development, economic development, and tourism and economic foundations, with nine accompanying objectives. Of the nine objectives listed in the Strategy, two pertain to economic development (City of Kenora, 2021):

- Activate development on Kenora's vacant and underutilized lands:
  - Improve the development readiness of publicly owned residential, commercial, and industrial lands.
  - Improve awareness of development opportunities, incentives, and partnerships available for vacant and underutilized lands through marketing efforts.
- Support the growth and retention of local businesses and emerging sections:
  - Establish a centralized business hub and resource centre to support local businesses.
  - Position Kenora to take advantage of specific strategic sector opportunities.
  - Provide supports and information to new and existing businesses through community partner and City led initiatives.
  - Prioritize support of COVID-19 response and relief efforts to assist the local business community.

The Municipality of Sioux Lookout 2020-2025 Strategic Plan states the following goals for community innovation and development (Municipality of Sioux Lookout, 2020):

- Provide infrastructure and housing to meet the needs of our community, now and as it grows:
  - Confirm that our assets are sustainable and that they will meet our long-term needs.
  - Use municipal best practices to identify innovative approaches to managing our infrastructure.
  - Verify that our transportation infrastructure allows people to get around safely and efficiently.
  - Encourage an increase in the housing available in Sioux Lookout to meet our current and future needs.
- Collaborate with community partners to foster growth and economic development:
  - Work proactively with local and regional economic development groups to advance our community's best interests;
  - Support local efforts to improve Sioux Lookout as a place to do business.
  - Work with local partners to promote and encourage tourism.
  - Support public transportation to make it available and useful to as many of our residents as possible.
- Enable community growth through innovative, proactive planning:
  - Confirm that the Municipality's planning policies and practices are appropriate to address current needs and accommodate future growth.
  - Work to secure sufficient commercial property to attract businesses to Sioux Lookout.
  - Minimize regulatory obstacles to development while ensuring appropriate processes are followed.
  - Develop programs and policies that encourage new businesses to move to Sioux Lookout and existing ones to stay here.

DRAFT

- Strengthen and enhance Sioux Lookout's status as "Hub of the North":
  - Assure that YXL remains the #1 airport in our area.
  - Collaborate with the hospital to maintain a strong working relationship.
  - Consider the implications for Indigenous people of any Municipal policies.
  - Recognize that addressing our social issues enhances Sioux Lookout's status as "Hub of the North".

4.3 Business Environment

4.3.1 Local Economy

North Caribou First Nation has two main stores within the community – Northern Store and Onadamakay for general goods.

Table 4-12 presents a breakdown of all 21 industries based on 2-digit North American Industry Classification System (NAICS[2]) codes and their presence within the geographical boarders of the Kenora District in 2018 and 2022. Trends of industry presence in Kenora District between 2018 and 2022 are summarized as follows:

- The industries with the highest growth between 2018 and 2022 include professional, scientific, and technical services (24%) and wholesale trade (19%); and
- 9 of the 21 industries reported saw a decline in jobs between 2018 and 2022.

Table 4-12: All Industry Presence in Kenora District (2018 – 2022)

Industry	2018 Jobs	2022 Jobs	2018 – 2022 Change	2018 – 2022 % Change

[2] The North American Industry Classification System (NAICS) is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data. The structure of NAICS is hierarchical with five levels, level 1 having 2-digits and level 5 having 6 digits. As the level increases the classification becomes more detailed.

Table 4-13 presents the industry supply chain, the purchases an industry makes from all other industries, in the Kenora District in 2020. This table displays the value and percentage of in-region purchases and imported purchases for 2020 that are summarized as follows:

- One fifth of supply chain purchases are made within the Kenora District;
- The industry with the highest percentage of in-region purchases is agriculture, forestry, fishing, and hunting at 71%;
- The industry with the lowest percentage of in-region purchases is management of companies and enterprises at 0%; and
- Total supply chain purchases amounted to approximately $2.7 billion in 2020.

Table 4-13: Industry Supply Chain in Kenora District (2020)

Industry	In-region Purchases	% In-region Purchases	Imported Purchases	% Imported Purchases	Total Purchases
Agriculture, forestry, fishing and hunting	$82,131,318	71%	$34,088,922	29%	$116,220,240

DRAFT

Table 4-14 presents the regional requirements, the value of goods and services demanded of the Kenora District by industry in 2020. Regional Requirements show the value of goods/services purchased from an industry (either in or outside the area) in order to meet the needs of the area. The table presents the level of demand for each industry met in-region and the demand met by imports that are summarized as follows:

- The majority of demand for goods and services is met by imports (82.8%);
- The industry meeting the most demand in-region is agriculture, forestry, fishing, and hunting with 52.6% of demand met in-region;
- Seven industries meet less than 10% of demand within region; and
- The total demand in 2020 was approximately $7.26 billion.

Table 4-14: Regional Requirements to Meet Demand by Industry in Kenora District (2020)

Industry	Demand met In-region	% Demand met In-region	Demand met by Imports	% Demand met by Imports	Total Demand
Agriculture, forestry, fishing and hunting	$84,483,367	52.6%	$76,021,015	47.4%	$160,504,382
Mining, quarrying, and oil and gas extraction	$39,675,550	4.8%	$781,595,917	95.2%	$821,271,467

DRAFT

4.3.2 Mining, Aggregate and Forestry Activities

Table 4-15 presents industry data for the following 2-digit NAICS[3] industries in Kenora District between 2018 and 2022 (Lightcast, 2023b):

- Mining, quarrying, and oil and gas extraction;
- Agriculture, forestry, fishing, and hunting;
- Each industry includes a variety of occupations which include but are not limited to:
- Non-metallic mineral mining and quarrying;
- Coal mining;
- Construction, forestry, mining, and industrial machinery, equipment and supplies merchant wholesalers;
- Support activities for forestry; and
- Forest nurseries and gathering of forest product.

It should be noted that activities associated with the traditional economy such as fishing and hunting may not be captured within this data. It is likely that these industries are underreported within Indigenous communities.

Included in this data are location quotients for 2018 and 2022 for each industry. Location quotients are ratios which help to quantify how concentrated a particular industry is in a specified geographic region in comparison to the nation. Location quotients above 1 indicate that an industry is more concentrated than the typical region. Industries with high location quotients are often those that are exporting a lot of goods and services out of the community (Lightcast, 2020).

- The mining, quarrying, and oil and gas extraction industry grew by 222 jobs between 2018 and 2022;
- The location quotient for the mining, quarrying, and oil and gas extraction industry indicates that the concentration of jobs within the industry exceeds the national average by more than 6 times in 2022;
- The agriculture, forestry, fishing, and hunting industry declined by 68 jobs between 2018 and 2022; and
- The location quotient for the agriculture, forestry, fishing, and hunting industry indicates that the concentration of jobs within the industry is slightly higher than the national average with 1.37 in 2018 and 1.17 in 2022.

Table 4-15: Mining, Quarrying, and Oil and Gas Extraction Industry in Kenora District (2018 – 2022)

Industry	2018 Jobs	2022 Jobs	2018 – 2022 Change	2018 – 2022 % Change	2018 Location Quotient	2022 Location Quotient
Mining, Quarrying, and oil and gas extraction	2,136	2,358	222	10%	5.9	6.5
Agriculture, forestry, fishing and hunting	493	425	-68	(14%)	1.4	1.2

[3] The North American Industry Classification System (NAICS) is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data. The structure of NAICS is hierarchical with five levels, level 1 having 2-digits and level 5 having 6 digits. As the level increases the classification becomes more detailed.

TRADITIONAL INDIGENOUS LAND AND RESOURCE USE

DRAFT

AtkinsRéalis - Confidential

5. Traditional Indigenous Land and Resource Use

5.1 Sites and Areas Used for Traditional Activities

Indigenous communities customarily use the lands and the resources of their traditional territories for various purposes related to traditional practices which include lakes and rivers for fishing and trapping corridors and trails for hunting and trapping. Many Indigenous communities rely on traditional practices, such as fishing and hunting as a source of food and income. As such, it is important to identify areas where traditional practices are used, to determine potential effects of the Project on Indigenous communities and their traditional use of lands and resources.

North Caribou Lake First Nation has settled on the Meagamow Lake to North Caribou Lake area for generations, and habitation in the area dates back millennia (Gordon, 1983).

North Caribou Lake First Nation identified the following species that are harvested: snowshoe hare, moose, beaver, marten, sturgeon, pike, bass and walleye (Golder, 2018). Historically there is evidence of consumption of beaver, muskrat, woodland caribou, moose, loon and trout (Gordon, 1983).

5.2 Culturally and Spiritually Important Sites and Areas

Many Indigenous communities have identified culturally and spiritually important sites and areas including travel routes, burial sites, and gathering sites. These areas are important to Indigenous communities as the sites hold historical value and allow members to spiritually connect with their ancestors through traditional ceremonies and activities. Some of these areas are only accessible by limited routes, which may also only be available during specific seasons (i.e., summer and winter roads); impacts to these travel routes may affect accessibility to culturally and spiritually important sites and areas. Identifying these areas will help determine the potential effects of the Project on culturally and spiritually important sites and areas.

North Caribou Lake First Nation would historically gather every summer at the home of their leader, Gici David, located at Atikup Point. When Gici David died in 1907, the Anglican Church built a church at this location (Gordon, 1983). Atikup Point continues to be an important gathering area for North Caribou Lake First Nation.

DRAFT

NON-TRADITIONAL LAND AND RESOURCE USE

DRAFT

AtkinsRéalis - Confidential

6. Non-Traditional Land and Resource Use

This section summarizes a baseline of Non-Traditional Land and Resource Use. This includes land use plans and policies, community-based land use planning, industrial and commercial land use, outdoor recreation and tourism, and provincial parks and protected areas. Non-Traditional land use also includes the designating of lands through federal, provincial or municipal authorities for a specific use. Baseline information was developed through a desktop review of existing information, federal and provincial mapping databases, federal and provincial policy and regulation review and secondary data. Secondary data included a review of recreation and tourism websites, municipalities websites and news articles.

6.1 Indigenous Homelands

It is acknowledged that the Project study areas are situated within the traditional lands of the Anishiniimowin/ Anishinaabe/ Mushkeego and Métis Peoples. “The Anishiniimowin/Anishinaabe/Mushkeego Peoples have called the lands of the James Bay Treaty home since time immemorial. The Mushkeego live mainly in the James Bay and Hudson Bay lowlands, while the Anishiniimowin and Anishinaabe traditionally live mainly in the interior, closer to the height of land that divides the James Bay and Hudson Bay watershed with those to the south.” (Ministry of Public and Business Service Delivery, 2022). The Métis homelands are also present within the James Bay Treaty area. The Anishiniimowin/ Anishinaabe/ Mushkeego and Métis Peoples are stewards of the land and hold the inherent right of self-determination that is recognized and affirmed under Section 35 of the *Constitution Act*, 1982. Canada has recently developed an Action Plan to implement the United Nations Declaration on the Rights of Indigenous Peoples (The United Nations, 2007). The five-year Action Plan (2023-2028) outlines and affirms as well as respects the inherent rights of Indigenous Peoples as they relate to lands, territories and resources, and autonomy.

6.2 Treaty Lands

Treaties are agreements made between the Government of Canada, Indigenous Nations and often provinces and territories that define ongoing rights and obligations on all sides. These agreements set out continuing Treaty Rights and benefits for each Indigenous Nation (CIRNAC, 2023).

Treaties with Indigenous Nations in Ontario include both:

- Historic (numbered) treaties with Indigenous Nations;
- Modern treaties, also called comprehensive land claim agreements with Indigenous Nations; and
- Specific claim agreements to address past grievances.

The Project is within land covered by Treaty No. 9 (CIRNAC, 2013). The Treaty No. 9 area covers approximately two--thirds of Ontario’s total landmass and includes:

> *“that portion or tract of land lying and being in the province of Ontario bounded on the south by the height of land and the northern boundary of the territory ceded by the Robinson Superior Treaty of 1850, and the Robinson Huron Treaty of 1850, and bounded on the east and north by the boundaries of the said province of Ontario as defined by law and on the west by a part of the eastern boundary of the territory ceded by the Northwest Angle Treaty No. 3.” (Crown-Indigenous Relations and Northern Affairs, 2013).*

Treaty No. 9 was signed between the Anishiniimowin/Anishinaabe/Mushkeego Peoples and the Crown in 1905-1906, with adhesions in 1929-1930. The Treaty contains a number of provisions including cash payments, the creation of reserves, education funds for schools and teachers, etc. With the signing of the Treaty, the Crown sought to extinguish First Nations title to the land. Treaty No. 9 also outlines traditional pursuits such as hunting, fishing and trapping that could continue, subject to federal regulations and “exceptions for settlement, mining, lumbering, trading or other purposes.” (Ministry of Public and Business Service Delivery, 2023).

DRAFT

In April 2023, leaders from 10 Treaty No. 9 First Nations announced a lawsuit against the Ontario and Canadian governments that could fundamentally change decision-making authority in the Treaty No. 9 territory (CBC News, 2023). The First Nations leading the lawsuit intend to establish co-jurisdiction in the Treaty No. 9 territory that would require consent of Indigenous Nations' way of life impacted by resource development. North Caribou Lake First Nation is not part of the lawsuit but is within land covered by Treaty 9.

The draft statement of claim mentions the objectives of Indigenous Signatories to the Treaty intended "to preserve bimaadiziwin in Ojibwe or pimaatisiium in Cree – happiness, prosperity, and protection of their traditional way of life" (APTN News, 2023). Mino-Bimaadiziwin translates to "into living a complete, healthy, and good life" which represents an Indigenous philosophy for a way of living (Thomas, 2020). Some of the key principles of Mino-Bimaadiziwin are to maintain a sacred relationship with all elements of creation including trees, fish, birds, animals, water, plants, people, and everything else provided by the Creator, and to live in harmony and coexistence. Mino Bimaadiziwin and other Indigenous laws represent Indigenous identity, outlining the roles, duties, and obligations of being a member of an Indigenous Nation (Thomas, 2020).

At this time, North Caribou Lake First Nation does not have a Land Code under the *First Nations Land Management Act* and land use is governed under the *Indian Act*.

6.3 Reserves

The *Indian Act*, R.S.C., 1985, c.I-5, states that land on reserves is owned by the Crown (Government of Canada) but it is given to the First Nation or the Band to hold and use as a tenant. This legal structure (to be a tenant on land owned by the Crown) is shared between community members collectively which provides a beneficial interest in the land. Under the *Indian Act*, a reserve means a tract of land of which is vested with His Majesty (Government of Canada) that has been set apart by His Majesty for the use or benefit of the Band. Section 81(1) sets out the by-laws which govern the authority of the Band Council and includes by-laws related to land use, zoning, the environment, and other works. These by-laws only apply on-reserve. On many reserves, if land is legally given to a Band member, a certificate of possession or certificate of occupation is granted. The certificate grants the individual(s) rights of possession or occupation of the property for housing, business, or resource extraction. Under the *Indian Act*, this requires the approval of the Minister of Indigenous Services.

6.4 Crown Land

The Project is proposed to be located primarily on provincial Crown land and will require access to, and the development, use and occupation of lands and resources which are currently used for traditional activities by Indigenous communities. Crown land is used to describe land owned by federal or provincial governments under the Public Lands Act (Section 6.6.2)

As described in Section 5, traditional activities of Indigenous communities include hunting, fishing, trapping, and gathering, as well as cultural and spiritual activities, which may occur on Crown land.

Given the location of the Project, land designated under the *Far North Act*, *2010* may be subject to community based land use plans (CBLUPs) initiated by Indigenous communities.

6.5 Road/Transportation Studies

No Road/Transportation Studies were available for review for North Caribou Lake First Nation at this time.

DRAFT

6.6 Provincial Plans and Policies

6.6.1 Far North Act, 2010

The *Far North Act, 2010* as amended in December 2021 sets out a joint planning process between First Nations communities and the province of Ontario. The *Far North Act* facilitates land use planning decisions in the Far North by governing how the Province will work with Indigenous communities to identify areas where development can occur, and areas that should be protected.

The *Far North Act, 2010* legislation was put in place to support the protection of environmental, cultural, and economic values for land use planning and to confirm that community-based land use planning is done in a manner consistent with recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act, 1982*. Ontario's *Far North Act, 2010* was represented as a significant piece of legislation for Indigenous communities in the North, fortifying the importance of community-based land use planning and the exercise of Indigenous rights of stewardship and jurisdiction over specific territories in Ontario. The Province must approve CBLUPs.

Under the *Far North Act, 2010*, the CBLUP process was developed by the province as a vehicle to explore with Indigenous communities and groups, among other land uses in First Nations areas, traditional and customary use, as well as the potential for permissible use of lands for forestry, tourism, recreation, mineral exploration and mining, renewable energy, access and infrastructure, fire management, and climate change management.

6.6.2 Public Lands Act

The Ontario *Public Lands Act* provides MNRF the authority to manage Crown land. Crown land occupies approximately 87% of all land and water in Ontario with 95% of northern Ontario considered Crown Land (MNRF, 2023). The *Public Lands Act* outlines the use, management, sale and disposition of public lands and forests (Ontario, 2022). The Act guides Ontario's public land use planning and development, regulating public and private roads on public lands.

6.6.3 The Planning Act

The Ontario *Planning Act* is provincial legislation that sets out the ground rules for land use planning. The *Planning Act* outlines how land may be used and controlled and the purpose of this Act is to make sure that planning processes are fair, open, accessible, timely, efficient and promote the best economic and environmental interest within the provincial policy framework. The *Planning Act* allows the province to integrate matters of provincial interest into municipal and regional planning decisions by requiring that all decisions that are made are in conformance with provincial plans.

6.6.4 Fisheries Management Plan

Fisheries Management Planning as administered by MNRF is designed to highlight and protect the value of the diversity of lakes and rivers and to be flexible and adaptable to a wide range of future conditions. The planning process considers the lake and river system in a holistic manner and includes a range of management options to secure a healthy lake environment that conserves the diversity of the fish community and provide opportunities to contribute to the social and economic well-being of the surrounding area. Ontario is divided into Fisheries Management Zones (FMZ). Each specific FMZ outlines restrictions and guidelines for sport and conservation activities as it relates to fishing to verify sustainability of the region's aquatic life. No specific fisheries management plans have been approved for FMZ 1 – 3 (MNRF, 2023h). North Caribou Lake First Nation lies within FMZ 2.

DRAFT

6.7 Land Use Plans and Policies

Where information is available, the following section describes community-based land use planning, on-reserve land use planning and other planning processes. It is noted that most communities do not publicly share their community plans, and currently, information is limited on such communities that have not provided information for the socio-economic Baseline for the Project.

Many First Nation communities have developed CBLUPs, which outlines land ownership, land access, and traditional uses on the land. Traditional land and resource use is described in Section 5.

Limited information is publicly available about this community's documented plans for land use (if any exist); however, as information becomes available through dialogue with the community, with permission from the community, information will be considered as part of the Environmental Assessment (EA)/Impact Assessment (IA).

6.8 Industrial Land Use

Ontario established the Critical Minerals Strategy in 2021, which is a comprehensive five-year plan to secure the province's position as a reliable global supplier of responsibly sourced critical minerals (Ministry of Natural Resources and Forestry, 2022h). Critical minerals are those with industrial, technological or strategic applications for which there are few viable substitutions and are currently at a higher supply risk due to geopolitical considerations and market demand (Ontario Mines Association, 2022). The success of the Critical Minerals Strategy is dependent on six components, referred to as the six pillars in the strategy, which include:

1. Enhancing geoscience information and supporting critical mining exploration;
2. Growing domestic processing and creating resilient local supply chains;
3. Improving Ontario's regulatory framework;
4. Investing in innovation, research and development;
5. Building economic development opportunities with Indigenous partners; and
6. Growing labour supply and developing a skilled labour force.

Mining activity is a large driver of the regional economy (see Section 5). Mining is regulated under the provisions of the provincial *Mining Act*. The purpose of the *Mining Act* is to "encourage prospecting, online mining claim registration and exploration for the development of mineral resources, in a manner consistent with the recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act, 1982*, including the duty to consult, and to minimize the impact of these activities on public health and safety and the environment" (Ministry of Mines, 2023). Registering a new mining claim and managing an existing mining claim, this is done online through the Mining Lands Administrative System (MLAS).

Under Section 50 of the *Mining Act*, a Mining Claim provides exclusive rights for the claim holder to explore for minerals and rights to enter, use and occupy surface rights as necessary for exploration and development. A mining claim does not provide mining rights for the land to the holder of the claim. Someone that holds a prospector license may stake out a mining claim on land that is open for staking and prospect for minerals on any Crown land, including land traditionally used by Indigenous Peoples and communities (Natural Resources Canada, 2013).

The Government of Ontario is working directly with First Nations through bilateral agreements that support each individual First Nation community's needs and priorities (Ministry of Mines, 2022). Proposed all season road projects in the Ring of Fire area are led by First Nation communities, which include project planning through EA/IAs, and maximizing benefits and opportunities for First Nations communities.

DRAFT

According to Ontario, building economic development opportunities with Indigenous partners is critical to the success of the strategy as collaboration on resource development projects can help in reconciliation with Indigenous peoples and communities and provide socio-economic benefits to Indigenous communities. To demonstrate Ontario's commitment to reconciliation and support economic development opportunities to build healthy and prosperous communities across Ontario's north, a resource revenue sharing agreement with Indigenous communities was developed (Ministry of Mines, 2022). This agreement allows Indigenous communities to share in the economic benefits of forestry and mining operations near their communities. This revenue can be used for economic development, education, health, community development, and cultural development. There are currently 35 Indigenous communities involved in the revenue resource sharing agreement with Ontario, including communities represented by Grand Council Treaty #3, Mushkegowuk Council, and Wabun Tribal Council.

To enhance Indigenous community participation, the Aboriginal Participation Fund provides $4.7M annually to support communities' participating in consultation, education and relationship-building activities related to mineral exploration and development (Ontario Mining Association, 2022).

Aggregates include sand, gravel and bedrock that are typically used in construction projects. Aggregate resources are regulated under the *Aggregate Resources Act*. Aggregate extraction on Crown land requires an Aggregate Permit and on private land it requires an Aggregate License if it is within an Aggregate Designated Area (Ministry of Natural Resources and Forestry, 2022a).

There is no information on industrial land use specific to North Caribou Lake First Nation available at this time.

6.9 Commercial Use, Outdoor Recreation and Tourism

Commercial use, outdoor recreation and tourism are important economic activities for a number of Indigenous communities'. Commercial use includes any activity or business that uses the resources from the land to provide income, such as commercial fishing, hunting and trapping. As fishing, hunting, trapping, and gathering wild plants has been a way of living for Indigenous Peoples across Canada for a millennia, many Indigenous communities rely on these traditional activities as their source of income (Kumar et al., 2019). According to the Indigenous Tourism Association of Canada, recreation and outdoor activities (which includes outfitters, hunting, fishing, and wilderness guides, as well as various types of recreational and adventure camps, including recreational vehicle parks and campgrounds) are an important domain in the Indigenous tourism sector (Fiser and Hermus, 2019). In the 2018 census survey completed by the Indigenous Tourism Association of Canada, Ontario generated the second highest revenue in direct GDP, among all provinces and territories in Canada, from recreation and outdoor activities (Fiser and Hermus, 2019). Tourism is also important because it provides an opportunity for visitors to learn about the history, experience, arts, and culture of Indigenous communities.

North Caribou First Nation has two main stores within the community – Northern Store and Onadamakay for general goods. North Caribou First Nation is serviced by flights with Weagamow Air and Wasaya Airways at Round Lake airport located 1.9 km west of the community and Weagamow Air Base (Northwest Health Line, 2023d).

DRAFT

6.10 Provincial Parks, Areas of Natural and Scientific Interest and Protected Areas

Provincial Parks

There are no federal, provincial, or regional/municipal protected parks and protected areas which overlap with the Project Footprint and North Caribou Lake First Nation Reserve.

In the region, provincial parks include:

- Winisk River Provincial Park

In 1966, the growing demand for tourism led to provincial government setting aside the "Winisk Wild River Indian Guide Territory" and established the Winisk River Provincial Park over Winisk Lake and Winisk River in 1968 (Ministry of the Environment Conservation and Parks, 2021a). This move, however, intersected with Indigenous Nations exercise of their inherent rights to traditional lands, water usage, and the pursuit of economic and community development goals. The Winisk River Provincial Park is located to the north of the Webequie First Nation Reserve, approximately 2.17 km from WSR. The parkland is approximately 141,000 ha in size and boasts unique landforms including a large moraine and drumlin fields. The only access to the park is by canoe, air or by float plane park (Ministry of Natural Resources, 1991). This park does not feature facilities for visitors but activities such as white-water paddling, canoe and kayaking, back country camping, fishing, hunting and snowmobiling are supported within the park (Ontario Parks, 2022). Five outpost camps are located along the Winisk River System to support fishing and hunting tourism. The Winisk River Provincial Park Interim Management Plan, 1991 provides direction for the management of the park (Ministry of Natural Resources, 1991). Additional tourism development will only be permitted once the management plan is complete (Ministry of Natural Resources, 1991)."

- Albany River Provincial Park

The Albany River Provincial Park was established in 1989, starting at Lake St. Joseph at Highway 599 and traversing downriver, approximately 300 km to approximately 30 km west of Marten Falls. The Albany River is a key waterway for travel for Anishinaabemowin/Anishinaabe/Mushkegowuk communities. First Nation members have cabins and camps which they use for harvesting and hunting within their traditional territory.

ANSI

There are no ANSIs or Candidate ANSIs which intersect the Project Footprint or North Caribou Lake First Nation Reserve.

Conservation Reserve

There are no conservation reserves which intersect with the Project Footprint or North Caribou Lake First Nation Reserve.

In the region, conservation reserves include:

- Severn River Conservation Reserve

The Severn River Conservation Reserve is located within the Severn River watershed and contains several important core natural heritage areas that are inventoried and protected by the Ministry of Natural Resources as Areas of Natural and Scientific Interest (ANSI) (Government of Ontario, 2021). The Severn River watershed also holds cultural importance for First Nation communities, such as the Kitchenuhmaykoosib Inninuwug First Nation who use the historic canoe routes within the watershed and the lakes and rivers for fishing (Wildlands League, 2013).

Re: Preliminary draft North Caribou Lake First Nation Community Existing Conditions Summary
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Benson,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR, or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities. At this time the Project Team is working toward completing the preliminary draft Socio-Economic Existing Conditions Report, that will be used to draft the effects assessment of the Project, which will be captured in the EA and IA.

The Project Team led by the Webequie First Nation is striving to gather as much Anishinaabemowin/Anishinaabe/Mushkegowuk Indigenous Knowledge as it relates to the Project and to help inform the socio-economic existing conditions.

This letter is to request your review of the draft Community-Specific Existing Conditions Summary document, which is based on the data and information collected for the Socio-Economic Existing Conditions Report of the EA/IA and presents the preliminary findings specifically collected for the North Caribou Lake First Nation. The document summarizes information gathered through publicly available online resources and information gathered with communities, through interviews, focus groups and surveys, if the community participated in the Socio-Economic Primary Data Collection Program. The community-specific baseline information provided in the document is arranged as follows:

- **Community Setting** – including community overview, history, values and aspirations;

- **Population and Demographics** – including population, age, gender, indigenous identity, mobility and migration, etc.;
- **Housing and Accommodations** – including housing demand/ affordability/ supply/ quality and number of people living in a home;
- **Social Services and Infrastructure** – including supply and demand for education, childcare, healthcare, water, waste, energy, and communications;
- **Transportation** – including volume of, and demand for, road and air transportation;
- **Community Well-Being and Safety** – including social cohesion and culture, participation in social and/or cultural events, safety such as levels of domestic violence, assault, and nuisance such as air quality and noise concerns;
- **Regional and Local Economy** – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity;
- **Traditional Indigenous land and resource use** – including sites and areas used for traditional activities, and culturally and spiritually important sites and areas;
- **Land Use Compatibility** – including existing and proposed land uses;
- **Recreation and Tourism** – including land/waterway access and resource availability; and
- **Provincial Parks and Protected Areas** – including areas of natural and scientific interest and conservation reserves.

We want to prepare a holistic and comprehensive overview of information for the North Caribou Lake First Nation and would much appreciate to hear back from you on this document as our team is always open to working with you for further improvement on the content.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Michael Fox

Chief Leo Sakchekapo
North Caribou Lake First Nation
General Delivery
Weagamow, ON
P0T 3B0

Dear Chief Sakchekapo,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, March 14, 2024, the package status indicates it was delivered to your community on February 1, 2024.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: The Floating Road**

The livestreaming event is scheduled for **March 18th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek

input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local

	translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: What are the Protections After the EA?**

The livestreaming event is scheduled for **March 25th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may ask questions on the platforms during the livestream or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions during the radio show at 1-844-424-0500 or the same email above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet

with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions

Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

March 27, 2024

Chief Leo Sakchekapo
North Caribou Lake First Nation
General Delivery
Weagamow, ON
P0T 3B0

Dear Chief Sakchekapo,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, March 27, 2024, the package status indicates it was delivered to the above mailing address on February 1, 2024.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Aquatic Habitat Preliminary Findings.**

The livestreaming event is scheduled for **April 1st, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may ask questions on the platforms during the livestream or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions during the radio show at 1-844-424-0500 or the same email above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Dear Chief Sakchekapo,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to the above mailing address containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Community Virtual Information Sessions for Round 3 of Consultation

In the upcoming months, the WSR Project team will be conducting community virtual information sessions for all communities for Consultation Round 3. The Project Team will share information about the EA/IA activities including a project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

There will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team also has a platform to allow for real-time translation to accommodate community members during the session.

The WSR Project Team will be sending a link to your community prior to the information session, so stay tuned and watch out for your community's invitation letter. In the meantime, please visit supplyroad.ca to find information on the WSR Project.

Livestream and Radio Show Series
The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Geology, Terrains, and Soils Preliminary Findings.**

The livestreaming event is scheduled for **April 22nd, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may ask questions on the platforms during the livestream or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions during the radio show at 1-844-722-4300 or the same email above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities
As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. May 29, 2024

Dear Chief Sakchekapo,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

We will be offering a community information session, via Zoom, on **Monday, June 10th from 11:00-11:45am EST** for North Caribou Lake First Nation, where there will be a presentation on the WSR Project activities for Consultation Round 3. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows:https://us06web.zoom.us/j/85871907772?pwd=z5qmxTdmwlyUj6mbUnyvPsoD5UAd9f.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID:** 858 7190 7772 **Passcode:** 086746

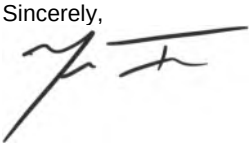
In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, AtkinsRéalis

July 15, 2024

Dear Chief Sakchekapo,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

We will be offering a community information session, via Zoom, on **Monday, July 29th from 11:00-11:45am EST** for North Caribou Lake First Nation, where there will be a second presentation on the WSR Project activities for Consultation Round 3. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows:
https://us06web.zoom.us/j/86320838978?pwd=4wa7dupJsQAz6jlaFbecYWbWfYr4L2.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID:** 863 2083 8978 **Passcode:** 065542

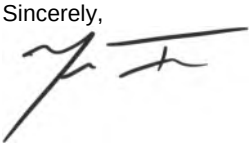
In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

Craig Wallace, Project Manager, AtkinsRéalis

Webequie Supply Road Project
Fall Geotechnical Drilling Program – Field Notice

What's happening?

AtkinsRéalis is proposing to complete drilling programs for the Webequie Supply Road (WSR) project to further engineering design and support the coordinated provincial and federal Environmental Impact Assessment. This letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). All works will be conducted in accordance with the permit conditions issued by MNR.

A borehole drilling program is planned to occur using a number of different methods of drilling depending on the terrain type and will include a multipurpose helicopter transportable drill, a Talon drill, and/or a ConeTec drill.

Helipad and drill pads will be cleared by a tree cutting team that will precede the drilling teams to ensure safe landing of the helicopters and drill equipment.

There are 50 boreholes proposed, including 37 sites intended for Talon Drilling, 18 ConeTec locations, and 13 sites completed by conventional drilling. The locations proposed for drilling are presented in the attached map.

Schedule

Work is expected to begin in late September 2024 and will continue until approximately mid-November 2024, depending on weather conditions.

What to expect

Field crews will be accessing sites across the study area by helicopter—you may see helicopters in the area carrying personnel and equipment. Crews may need to clear brush and trees from helipad sites to allow helicopter access, which could require the use of chainsaws.

Helicopters may be flying into the Webequie and Ogoki Post airports for refueling and staging purposes.

Re: Early Circulation of Draft Environmental Assessment Report / Impact Statement
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Sakchekapo,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR, or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities. We are using a coordinated approach to ensure all federal and provincial requirements are met and will formally submit/release the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

Today, we are writing to advise you that we are planning an early circulation of the draft EAR/IS to provide the opportunity for your community to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. Early circulation of the draft EAR/IS is a discretionary step in the EA/IA process which the Webequie Project Team is offering to hear your community's views and help us better understand any concerns to address when finalizing the document. At this time, we envision the early circulation of the draft EAR/IS to communities will occur in late fall or early winter of this fiscal year 2024/2025. This will provide communities an extended review period of 60-days to provide their review and comments. Following the circulation of the draft EAR/IS to Indigenous communities, the draft EAR/IS will be circulated formally to the public and stakeholders for 60-day review. This would provide an additional 60 days for Indigenous communities to review the draft EAR/IS, for a total review period of 120 days. Once a final EAR/IS is submitted to the provincial and federal governments for review and a decision, there will be an additional opportunity for Indigenous communities to provide comments during the provincial and the federal 49-day public review period.

We will follow-up with you as we move closer to the circulation of the draft EAR/IS, including how you would like to receive the document (electronic and/or hard copy).

Should you have any questions, please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project Team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Re: Round 3 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Sakchekapo:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR or the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report 3 (electronic and hard copy), which summarizes and documents Round 3 of the Engagement and Consultation Program with your community for your review and comments.

The Consultation Progress Report 3 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Reports 1 and 2 for Consultation Rounds 1 and 2 were provided to Indigenous communities and the MECP in October 2022 and January 2024, respectively. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 3 provides an overview of engagement activities in Consultation Round 3, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 3 of the Engagement and Consultation Program occurred from April 2024 to September 2024. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 2;

- Summary of preliminary effects assessment for select valued components, including cumulative effects;
- Incorporation of IKLRU information into EA/IA;
- Proposed mitigation, and follow-up monitoring program; and
- Next steps in EA/IA process.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report 3, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Next steps in the engagement and consultation program for the Project will involve various engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement (EAR/IS), including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. Future engagement and consultation sessions for communities are tentatively scheduled to start in Winter of fiscal year 2024/2025 and will coincide with the release of the draft EAR/IS for review and comments. The outcomes from future engagement and consultation activities planned will be used by the Project Team to help inform in the development of the Final EAR/IS that will be submitted to provincial and federal regulators and circulated to all Indigenous communities for review and comments.

We welcome any feedback and input your community may have on the attached Consultation Progress Report 3, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report 3, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

November 5, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Assessment on Effects on Geology, Terrain and Soils.**

The livestreaming event is scheduled for **November 12th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, AtkinsRéalis
Craig Wallace, Project Manager, AtkinsRéalis

November 13, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Assessment on Effects on Surface Water Resources.**

The livestreaming event is scheduled for **November 18th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or you can email mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Community Virtual Information Sessions for Round 4

The WSR Project Team will be starting virtual information sessions for each community for Consultation Round 4. These are one-on-one sessions where the Project Team shares information about the cumulative effects assessment. The session consists of a presentation on the WSR approach to assessing cumulative effects, followed by a question-and-answer period. The WSR Project team also has a platform to allow for real-time translation to accommodate community members during the session.

You can visit www.supplyroad.ca/sessions/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Chief Leo Sachekapo
North Caribou Lake First Nation
General Delivery
Weagamow, ON
P0T 3B0

Dear Chief Sakchekapo,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 3

On November 5, 2024, the WSR Project Team sent a package via Canada Post to the above address containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 16, 2024, the package status indicates the package has been delayed and is currently in transit to your community. We are aware of the Canada Post strike which began on November 15, 2024, that has caused a further delay to the delivery of the report. Because of the strike, our team will be sending the files for Consultation Progress Report Round 3 via WeTransfer in a separate email.

The Consultation Progress Report 3 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Reports 1 and 2 for Consultation Rounds 1 and 2 were provided to Indigenous communities and the MECP in October 2022 and January 2024, respectively. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 3 provides an overview of engagement activities in Consultation Round 3, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 3 of the Engagement and Consultation Program occurred from April 2024 to September 2024. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 2

- Summary of preliminary effects assessment for select valued components, including cumulative effects;
- Incorporation of IKLRU information into EA/IA;
- Proposed mitigation, and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the Consultation Progress Report 3, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 4. Should your community have any questions or comments on the Consultation Progress Report 3, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board

	meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

General Delivery
Weagamow, ON
P0T 3B0

Dear Chief Sakchekapo,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 3

On November 5, 2024, the WSR Project Team sent a package via Canada Post to the above address containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 16, 2024, the package status indicates the package has been delayed and is currently in transit to your community. We are aware of the Canada Post strike which began on November 15, 2024, that has caused a further delay to the delivery of the report. Because of the strike, our team will be sending the files for Consultation Progress Report Round 3 via WeTransfer in a separate email.

The Consultation Progress Report 3 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Reports 1 and 2 for Consultation Rounds 1 and 2 were provided to Indigenous communities and the MECP in October 2022 and January 2024, respectively. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 3 provides an overview of engagement activities in Consultation Round 3, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 3 of the Engagement and Consultation Program occurred from April 2024 to September 2024. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 2

- Summary of preliminary effects assessment for select valued components, including cumulative effects;
- Incorporation of IKLRU information into EA/IA;
- Proposed mitigation, and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the Consultation Progress Report 3, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 4. Should your community have any questions or comments on the Consultation Progress Report 3, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board

	meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

January 9, 2025

Dear Chief Sakchekapo,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share information about the cumulative effects assessment (CEA).

We will be offering a community information session, via Zoom, on Monday, January 13th from 11:00-11:45 AM EST for North Caribou Lake First Nation, where there will be a presentation on the on the topic of the CEA for the Project as part of the engagement activities for Consultation Round 4. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session can be found at the following link: https://us06web.zoom.us/j/87208215988

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-722-4300. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685.

In addition, the Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. The Project Team is offering opportunities for engagement related to cumulative effects assessment in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the CEA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the CEA with a question-and-answer period at the end of the presentation.

Method	Description
Drop-In Sessions	Community members can drop-in at a safe location to discuss the CEA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the CEA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the CEA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the CEA process with a local translator that the Project team will pay for to explain the CEA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the CEA.

You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

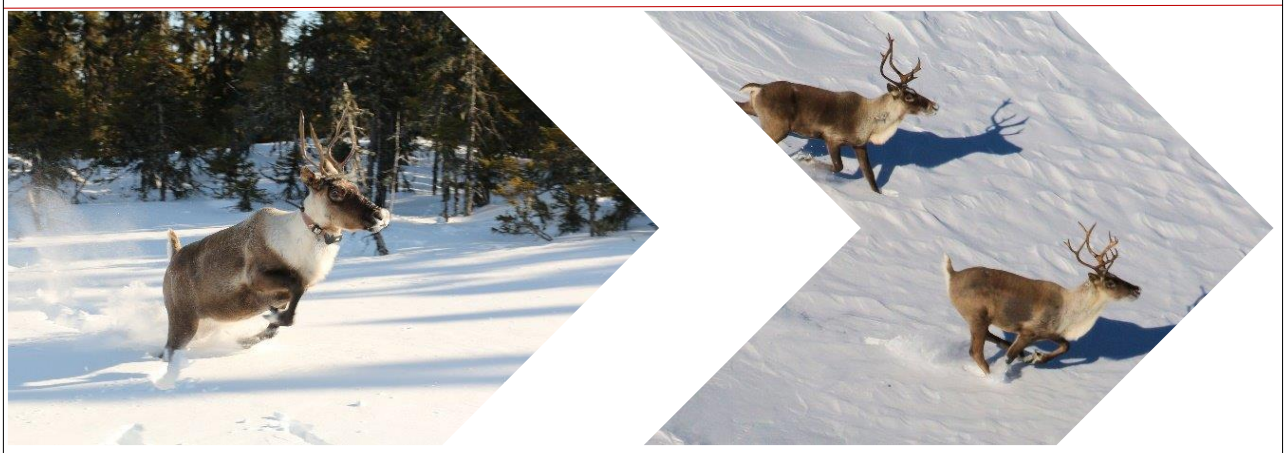
FIELD NOTICE

WEBEQUIE SUPPLY ROAD

JANUARY 2025



WHAT'S HAPPENING?

Field work will be continuing in the 2025 winter season to support the provincial Environmental Assessment (EA) and federal Impact Assessment (IA) for the Webequie Supply Road.

ATIKWAG/CARIBOU COLLAR REMOVAL

Field work has been scheduled to take place from February 19th to March 1st, 2025, to manually remove atikwag/caribou GPS radio tracking collars.

In 2021, radio tracking collars were placed on atikwag/caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, these collars were set to automatically release in February 2024, however not all collars released as intended. A specially trained team will manually remove collars without harming the animal.

WHAT TO EXPECT

Field crews will be accessing sites across the study area by helicopter so you may see helicopters in the area. An update will be provided if the above schedule changes due to weather or other conditions.

WHERE?

See the attached map of the study area. Please note that atikwag/caribou can travel very far and therefore, the field team may need to travel outside of the study area boundaries.

DISCLAIMER

February 13, 2025

Dear Chief and Council,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share information about the cumulative effects assessment (CEA).

We will be offering a community information session for Round 4 Part 2, via Zoom, on Monday, February 24th from 11:00-11:45 AM EST for North Caribou Lake First Nation, where there will be a presentation on the on the topic of the CEA for the Project as part of the engagement activities for Consultation Round 4. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/85681137757?pwd=x1rjAAb8H6kBLsTCtAGxaBRjHaBMRw.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-722-4300. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685.

In addition, the Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. The Project Team is offering opportunities for engagement related to cumulative effects assessment in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the CEA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the CEA with a question-and-answer period at the end of the presentation.

Method	Description
Drop-In Sessions	Community members can drop-in at a safe location to discuss the CEA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the CEA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the CEA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the CEA process with a local translator that the Project team will pay for to explain the CEA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the CEA.

You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Chief Leo Sakchekapo
North Caribou Lake First Nation
General Delivery
Weagamow, ON P0T 3B0

Re: Early Circulation of Draft Environmental Assessment Report/Impact Statement for Review
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Sakchekapo,

We hope that this finds you and your community well.

As you may know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR), or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (refer to attached project location key plan).

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted for the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and have prepared the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

Today, we are writing to advise you that an early circulation of the Draft EAR/IS is now available to your community for review. The Draft EAR/IS documents the evaluation of alternative routes considered for the WSR and presents the Preferred Route and location for supportive project infrastructure (e.g., construction camps, pits/quarries). It also documents the potential environmental, social, cultural and health impacts including cumulative effects, proposed mitigation measures, and engagement and consultation undertaken so far.

The draft EAR/IS is being circulated in two stages:

- Early Access for Indigenous Communities: 120-Day Review Period, June 9 to October 7, 2025
- Public and Stakeholders: 60-Day Review Period, August 8 to October 7, 2025

The two-stage approach to circulation of the Draft EAR/IS will provide your community with an extended review period to provide comments on the document, for a total of 120 days.

Enclosed is the Draft EAR/IS for the WSR Project for review. This package includes:

- One (1) hard copy of the main body of the Draft EAR/IS;

- Electronic copy (USB - digital memory stick) of EAR/IS Appendices that include draft technical reports; and
- One hard copy and electronic copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree and Cree.

The Draft EAR/IS and information on the review process is also available on the WSR Project Website: **https://www.supplyroad.ca/draftea**.

What is not included in Draft EAR/IS at this time is the draft Record of Consultation and Engagement with Indigenous communities, the public and stakeholders. This document will be provided to your community when the draft EAR/IS is released for public and stakeholder review (August 8, 2025). In the interim, consultation and engagement activities and feedback we received from your specific community are documented in the Consultation Progress Reports for Rounds 1, 2 and 3 previously sent to you at key milestones in the EA/IA process, and can also be found on the Project website https://www.supplyroad.ca under "**Documents**".

Members of your community are encouraged to actively participate in the review of the Draft EAR/IS. Comments and feedback can be provided via the Project Website (https://www.supplyroad.ca); Project email (wsrcomments@supplyroad.ca) or by letter mail until October 7, 2025 to the contacts below:

Re: Early Circulation of Draft Environmental Assessment Report/Impact Statement for Review
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Sakchekapo,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR), or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted for the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and have prepared the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

The Draft EAR/IS documents the evaluation of alternative routes considered for the WSR and presents the Preferred Route and location for supportive project infrastructure (e.g., construction camps, pits/quarries). It also documents the potential environmental, social, cultural and health impacts including cumulative effects, proposed mitigation measures, and engagement and consultation undertaken so far.

The Draft EAR/IS is being circulated in two stages:

- Early Access for Indigenous Communities: 120-Day Review Period, June 9 to October 7, 2025
- Public and Stakeholders: 60-Day Review Period, August 8 to October 7, 2025

The two-stage approach to circulation of the Draft EAR/IS will provide your community with an extended review period to provide comments on the document, for a total of 120 days.

An early circulation of the Draft EAR/IS is now available for your community for review on our Project website at https://www.supplyroad.ca/draftea. Additionally, our team has sent a package to your community containing the Draft EAR/IS for the WSR Project for your review. This package includes:

- One (1) hard copy of the main body of the Draft EAR/IS;
- Electronic copy (USB - digital memory stick) of EAR/IS Appendices that include draft technical reports; and
- One hard copy and electronic copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree and Cree.

Our team is available for meetings with your community to review sections of the Draft EAR/IS and technical reports of interest in the proposed methods below. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the Draft EAR / IS.

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Draft EAR/IS. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the Draft EAR/IS with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the Draft EAR/IS with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Draft EAR/IS facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the Draft EAR/IS to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the Draft EAR/IS presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the Draft EAR/IS process with a local translator that the Project team will pay for to explain

Method	Description
	the Draft EAR/IS. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Draft EAR/IS.

Should you have any questions, or if you would like to schedule a meeting to discuss, please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

Sincerely,

Michael Fox

Re: Early Circulation of Draft Environmental Assessment Report/Impact Statement for Review
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Sakchekapo,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR), or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted for the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and have prepared the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

The Draft EAR/IS documents the evaluation of alternative routes considered for the WSR and presents the Preferred Route and location for supportive project infrastructure (e.g., construction camps, pits/quarries). It also documents the potential environmental, social, cultural and health impacts including cumulative effects, proposed mitigation measures, and engagement and consultation undertaken so far.

The Draft EAR/IS is being circulated in two stages:

- Early Access for Indigenous Communities: 120-Day Review Period, June 9 to October 7, 2025
- Public and Stakeholders: 60-Day Review Period, August 8 to October 7, 2025

The two-stage approach to circulation of the Draft EAR/IS will provide your community with an extended review period to provide comments on the document, for a total of 120 days.

An early circulation of the Draft EAR/IS is now available for your community for review on our Project website at https://www.supplyroad.ca/draftea. Additionally, our team has sent a package to your community containing the Draft EAR/IS for the WSR Project for your review. This package includes:

- One (1) hard copy of the main body of the Draft EAR/IS;
- Electronic copy (USB - digital memory stick) of EAR/IS Appendices that include draft technical reports; and
- One hard copy and electronic copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree and Cree.

Our team is available for meetings with your community to review sections of the Draft EAR/IS and technical reports of interest in the proposed methods below. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the Draft EAR / IS.

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Draft EAR/IS. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the Draft EAR/IS with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the Draft EAR/IS with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Draft EAR/IS facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the Draft EAR/IS to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the Draft EAR/IS presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the Draft EAR/IS process with a local translator that the Project team will pay for to explain

Method	Description
	the Draft EAR/IS. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Draft EAR/IS.

Should you have any questions, or if you would like to schedule a meeting to discuss, please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

Sincerely,

Michael Fox

Dear Chief Sakchekapo,

We hope that this finds you and your community well.

Early Circulation of the Draft Environmental Assessment Report/Impact Statement for Review

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR), or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted for the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and have prepared the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

The Draft EAR/IS documents the evaluation of alternative routes considered for the WSR and presents the Preferred Route and location for supportive project infrastructure (e.g., construction camps, pits/quarries). It also documents the potential environmental, social, cultural and health impacts including cumulative effects, proposed mitigation measures, and engagement and consultation undertaken so far.

The Draft EAR/IS is being circulated in two stages:

- Early Access for Indigenous Communities: 120-Day Review Period, June 9 to October 7, 2025
- Public and Stakeholders: 60-Day Review Period, August 8 to October 7, 2025

The two-stage approach to circulation of the Draft EAR/IS will provide your community with an extended review period to provide comments on the document, for a total of 120 days.

- One (1) hard copy of the main body of the Draft EAR/IS;

- Electronic copy (USB - digital memory stick) of EAR/IS Appendices that include draft technical reports; and
- One hard copy and electronic copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree and Cree.

Draft EAR/IS Chapter Learning Aid and Plain Language Summaries

To help facilitate your review, our team has developed a learning module which provides a video breakdown in plain language for each chapter of the Draft EAR/IS in English, Oji-Cree, and Cree. We have also created Plain Language Summaries for each chapter of the Draft EAR/IS in English, Oji-Cree, and Cree. These resources can be found in the learning module at the following link: https://learning.supplyroad.ca/.

Webequie Supply Road Project
Winter Geotechnical Drilling Program – Field Notice

What's happening?

AtkinsRéalis is proposing to undertake a geotechnical drilling program for the Webequie Supply Road (WSR) project to support the coordinated provincial and federal environmental assessment/impact assessment and to further engineering design. This letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). All works will be conducted in accordance with any permit conditions issued by MNR.

A borehole drilling program is planned to occur using a multipurpose helicopter transportable drill. Helipad and drill pads will be cleared by a tree cutting team that will precede the drilling teams to ensure safe landing of the helicopters and drill equipment. The locations proposed for drilling are presented in the attached map.

Schedule

Work is expected to begin on January 15, 2026, and will continue until approximately the end of April, 2026, depending on weather conditions. **At this time, no permits or authorizations have been received from the MNR. The field program schedule is contingent on receiving all of the required permits and authorizations**

What to expect

Field crews will be accessing sites across the study area by helicopter—you may see helicopters in the area carrying personnel and equipment. Crews may need to clear brush and trees from helipad sites to allow helicopter access, which could require the use of chainsaws. Helicopters may be flying into the Webequie and Ogoki Post airports for refueling and staging purposes.

Shibogama First Nation Council — Aboriginal Businesses

Contact Date: Oct 29, 2021 16:30 Method: E-mail
Topics to be Discussed: Notice of Commencement of Environmental Assessment
Don Parkinson of SNC Lavalin Inc (SNC) emailed the Notice of Commencement of Environmental Assessment (EA) for the Webequie Supply Road (WSR) Project to all stakeholders including the public, Indigenous communities, agencies and other interested parties. The email informed the stakeholders that the Terms of Reference (ToR) with amendments for the WSR EA Study was approved by the Minister of the Environment, Conservation and Parks (MECP) on October 8th, 2021. The email also informed them that the approved ToR and Notice of Approval can be accessed on the project website. It further encouraged participation in future consultations.

Contact Date: Aug 18, 2022 15:33 Method: E-mail
Topics to be Discussed: Notice of Public Information Centre
Brianna Patrick and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email blast to all Indigenous communities and organizations with a Notice of Public Information Centre being held on August 25, 2022 at 2:00pm to 5:00pm and at 6:00pm to 9:00pm at the Valhalla Hotel inn, Thunder Bay to provide interested parties an opportunity to learn about the ongoing Environmental Assessment/Impact Assessment (EA/IA) study for the WSR Project and provide feedback. The Notice provided information on the Project purpose, details of the EA/IA, and the contact information of Project Leads. The Notice also included a map of the Project area and two alternative road locations.

Topics to be Discussed: Notice of Public Information Centre #2 for EA
Don Parkinson, Consultation Lead of AtkinsRéalis, emailed the Notice of Public Information Centre #2 (PIC #2) for the Environmental Assessment Phase of the Webequie Supply Road Project to public and private stakeholders, land tenure and claim holders, federal and provincial agencies, and other interested parties. Don reminded that a Public Information Centre (PIC) is being held to provide interested parties an opportunity to learn and provide feedback on the Environmental Assessment / Impact Assessment (EA/IA) for the Webequie Supply Road. The email also informed that the PIC #2 will consist of a presentation at 2:00pm and 6:00pm followed by an informal drop-in session with display information about the project. The PIC has been scheduled to be on Monday, October 2, 2023 and Tuesday, October 3, 2023 from 2:00pm to 4:00pm and 6:00pm to 8:00pm at the Victoria Inn Hotel & Convention Centre in Thunder Bay, Ontario and Thursday, October 12, 2023 from 6:00pm to 8:00pm at the Cedar Meadows Resort & Spa in Timmins, Ontario. The Notice provided information on the Project purpose, details of the EA/IA, and the contact information of the Project Leads. The Notice also included a map of the Project area and two alternative road locations.

Topics to be Discussed: Notice of Commencement of Environmental Assessment
Don Parkinson of SNC Lavalin Inc (SNC) emailed the Notice of Commencement of Environmental Assessment (EA) for the Webequie Supply Road (WSR) Project to all stakeholders including the public, Indigenous communities, agencies and other interested parties. The email informed the stakeholders that the Terms of Reference (ToR) with amendments for the WSR EA Study was approved by the Minister of the Environment, Conservation and Parks (MECP) on October 8th, 2021. The email also informed them that the approved ToR and Notice of Approval can be accessed on the project website. It further encouraged participation in future consultations.

Contact Date: Nov 03, 2021 14:00 Method: Mail
Topics to be Discussed: Community Newsletter, Terms of Reference, Environmental Assessment Process
Melanie Laforest and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team mailed a letter and 50 copies of a newsletter to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap, advising that the WSR Project's Terms of Reference (ToR) had been approved with amendments by the Minister of the Environment, Conservation and Parks, and that the Environmental Assessment (EA) process would begin. The letter indicated that multiple copies of the newsletter were enclosed for distribution to the community. The newsletter provided information about the steps involved in the EA process, including the Notice of Commencement, Baseline Studies and Identification of Alternatives, Engagement and Consultation, and the Indigenous Knowledge Program. Michael provided a link to the WSR Project website along with himself and Don Parkinson of SNC-Lavalin's email address if WAFN has any questions or comments.

Topics to be Discussed: Indigenous Knowledge / Indigenous Land and Resource Use Program
Brianna Patrick and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an e-mail to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap, with an attached package that included a letter, map, and Information Sharing Agreement. The letter advised that the WSR Project Team are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program and inquired whether WAFN would be interested in participating in the Program. The letter included information about the IKLRU Program purpose, phases and guiding principles. The letter noted the importance of the protection and confidentiality of information collected and used in the IKLRU Program and indicated that a draft Information Sharing Agreement was included in the package, which outlined how confidential and sensitive information would be utilized in the WSR Project's environmental assessment and design process. A map of the Preliminary Study Areas for Indigenous Peoples Land Use and Interests was also included in the package. The letter asked WAFN to confirm their interest in participating in the Program by January 27, 2022. Brianna and Michael provided their email and cell phone contact information if WAFN has any questions.

Topics to be Discussed: Virtual Information Session
Don Parkinson and Laura Drumbrell of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session for Wapekeka First Nation (WAFN) on August 8, 2022. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, Don played a video presentation which included information on WSR's Environmental Assessment/Impact Assessment (EA/IA) activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. After the video presentation, Laura noted that no comments have been received from WAFN at this time, and that the Project Team would be happy to visit the community to discuss the Project further. Laura provided further information regarding the Indigenous Knowledge/Indigenous Land Use Program, potential jobs and employment which will be explored through the baseline socio-economic study, and the Cumulative Effects Analysis for the Project. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. There were no community representatives in attendance. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing.

Topics to be Discussed: WSR Consultation Progress Report Round 1
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Wapekeka First Nation’s (WAFN) Chief Brennan Sainnawap which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 1. The USB contained files supporting Record of Consultation. The letter explained that the Consultation Progress Report summarizes the documents from Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. The report being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 2 for the Project from Winter 2023 to Summer 2023 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 2. Michael's email and cell phone contact information was provided if WAFN has any questions or comments.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Wapekeka First Nation (WAFN)'s Chief Brennan Sainnawap, with a letter inviting the community's participation in the Socio-Economic Primary Data Collection Program as part of the WSR Environmental Assessment/Impact Assessment (EA/IA). The letter was a follow-up to the letter sent on December 20, 2021, which outlined the purpose of the socio-economic study, types of information that the Project team wants to gather, and suggested primary data collection methods. The letter explained that the Project team has a timeframe for the EA/IA process to complete the studies and document the results, and the goal for the year is to complete a Draft Socio-Economic Existing Conditions Report. The letter explained that the Project team would like to collaborate with the community to discuss and collect socio-economic information and/or verify information gathered to-date based on current research to help understand existing social and economic conditions. The letter provided an overview of the preliminary Valued Components for the EA/IA to represent aspects of social and economic conditions that are important to the community which require information gathering. The letter requested an indication of WAFN's interest in participating in the Socio-Economic Primary Data Collection Program by April 17, 2023, because it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by June 16, 2023.

The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if WAFN has any questions or comments.

The fax also included the English WSR Newsletter - Issue 20 which provided information about Consultation Round 2 Topics, the Socio-Economic Primary Data Collection Program, the Indigenous Knowledge and Land Resource Use Program, and the livestream and radio schedule for March 2023. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael, Don Parkinson of SNC-Lavalin, and Leslie Spence the WSR Local Coordinator provided their email address and phone number if WAFN has any questions or comments. Fax transmittal error: Fax failed.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Wapekeka First Nation (WAFN)’s Chief Brennan Sainnawap as a follow up to the email sent on March 17, 2023 regarding the invitation to participate in the Socio-Economic Primary Data Collection Program as part of the Environmental Assessment / Impact Assessment. Heather asked the Chief if they had any questions regarding the original email and letter and indicated that the WSR Project team would like to hear back by April 17, 2023 as to WAFN’s interest in participating in the program. The letter detailed the purpose of the socio-economic study, the type of information that the WSR Project team is seeking, the study area, how information will be collected, schedule, and next steps. Heather requested the Chief to let the WSR Project team know if they prefer a call to discuss the request in the letter.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Wapekeka First Nation (WAFN) on April 24, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, the Project Team played a voiceover presentation which included a testimony by the Webequie First Nation Chief Wabasse and information on WSR's Environmental Assessment / Impact Assessment (EA / IA) activities including alternative assessment methodology and results, valued components, preferred alternative and consultation approach and next steps. After the video presentation, Don discussed several concerns that had been previously raised by WAFN. Don mentioned that the concerns are regarding ownership of the road, public access to the road leading to overharvesting, impact on family traditional use and traplines. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing. The team also informed the audience of the upcoming radio and livestreaming events the following day. There were no community members in attendance.

The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on the Proposed Criteria and Indicators for Evaluation of Alternatives for Supporting Infrastructure, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 Part 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if WAFN has any questions or comments.

Topics to be Discussed: Indigenous Knowledge / Land and Resource Use Program
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Brennan Sainnawap of Wapekeka First Nation (WAFN) with an attached letter as a follow up to the correspondence sent on December 13, 2021 regarding WAFN’s participation in the Indigenous Knowledge / Land Resource Use (IKLRU) Program for the WSR Project. The letter noted that the Project team has also phoned the band office on January 17, 2022, February 24, 2022, April 13, 2022, and sent an email on January 20, 2022 and February 24, 2022 to follow up and advise that the IKLRU Program has started and to confirm if the community is interested in participating. The letter provided an overview of the IKLRU Program as part of the Environmental Assessment / Impact Assessment and indicated that the community is currently eligible to enter into a funding agreement with the Province of Ontario to participate in the IKLRU Program for the WSR Project. The Project team encouraged the community to contact Ontario to determine how to proceed with submission of an application to receive funding for the community and offered support throughout the process. The letter requested an indication of the community’s interest in participating in the IKLRU Program by the end of June 2023. The letter indicated that all knowledge that is shared will be safeguarded with a formal Confidentiality and Data Sharing Agreement, which will ensure all input from the community will remain the ownership of the community, and that no information will be shared beyond the Project team, without the consent of the community. The letter also indicated that as the Proponent, Webequie First Nation bears the responsibility for the Project and the assessment processes being applied to it. Michael provided his contact information and closed by wishing the community continued health and wellness.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Wapekeka First Nation (WAFN) on July 10, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. The meeting began with a video of Chief Wabasse discussing the importance of the project to the Webequie Community. Don explained that the Part 2 of Consultation Round 2 will discuss the Project team’s work on the evaluation of alternatives for supportive infrastructure which includes aggregate rock sources for pits and quarry access roads and construction camps. Don presented information on how various factors were evaluated to produce preferred options based on a lower score. Don also explained the various engineering structures such as culverts, bridges, access roads etc. in detail and shared graphics illustrating what the proposed structures would look like after completion. The WSR Project Team had a platform which provided a real-time translation of the session in Oji-Cree. No participants from WAFN were in attendance. Don reiterated that the Project Team would like to hear from WAFN community members in-person and that a recording of the session would be available through YouTube and the WSR Website.

Topics to be Discussed: Engagement Options, Virtual Information Sessions 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent a fax to Wapekeka First Nation (WAFN)'s Chief Brennan Sainnawap which included a letter that offered various community engagement options to help create awareness of the Project. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 Part 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if WAFN has any questions or comments.

Topics to be Discussed: Aboriginal Treaty Rights and Interests Forum Invitation
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Brennan Sainnawap of Wapekeka First Nation (WAFN) with an attached invitation for the Aboriginal and Treaty Rights and Interests (ATRI) Forum hosted by the Province of Ontario in Thunder Bay on November 21-23, 2023. The poster explained that Webequie First Nation and Marten Falls First Nation encourage the community to participate in the follow-up Forum to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link (NRL), and Marten Falls Community Access Road (MFCAR) Projects. The poster provided more information on how community representatives can attend, the purpose of the forum, who should attend from each community, and an email address for the community to RSVP. The Province of Ontario, Michael Fox of WSR, Andrea Nokleby of MFCAR, and Mishal Neesar of NRL provided their emails for further information if WAFN has any questions or comments.

Topics to be Discussed: WSR Consultation Progress Report Round 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 2. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 2. The letter explained that the Consultation Progress Report summarizes the documents from Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 3. Michael's email and cell phone contact information was provided if WAFN has any questions or comments.

The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter provided the status of delivery as of February 15, 2024. An overview of the Consultation Progress Report for Round 2 was provided and the letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on February 20, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on Construction Camps and other Project opportunities, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if WAFN has any questions or comments.

Topics to be Discussed: Draft Community-Specific Preliminary Existing Conditions Document
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap with a letter and report attached regarding the Community-Specific Existing Conditions Summary Document. The letter requested the community's review of the draft Community-Specific Existing Conditions Summary document, which is based on the data and information collected for the Socio-Economic Existing Conditions Report of the EA/IA and presents the preliminary findings specifically collected for WAFN. The letter provided a list of the community-specific baseline information provided in the document and indicated that the Project Team would appreciate hearing feedback from the community on the document as the team is always open to working with the community for further improvement on the content.

Topics to be Discussed: Draft Preliminary Existing Conditions Document and Consultation Progress Report Round 2
McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team phoned the Wapekeka First Nation band office to follow up with Chief Brennan Sainnawap about the Draft Preliminary Socio-Economic Existing Conditions Document that was sent to the Chief via email on March 11, 2024 and the Consultation Progress Report for Consultation Round 2 that was mailed to the community on January 29, 2024. The purpose of the call was to see if the community had any feedback or questions on the report. McKenna spoke with the receptionist who indicated the Chief was not in office. McKenna left a message with her name, number, and purpose of the call.

Topics to be Discussed: Consultation Round 2 Report Follow Up, Livestream, Radio Show
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap, with a letter and poster attached. The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on April 15, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on Groundwater Preliminary Findings, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if WAFN has any questions or comments.

Topics to be Discussed: WSR Newsletter - Issue 33, Consultation Progress Report Round 2 Follow Up, Virtual Community Information Sessions, Livestream, Radio Show
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap, with a letter, poster, and English WSR Newsletter - Issue 33 attached. The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on April 22, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on Geology, Terrains, and Soils Preliminary Findings along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if WAFN has any questions or comments.

The English WSR Newsletter – Issue 33 was also attached and provided information about the Aquatic Habitat Preliminary Findings and the upcoming community Virtual Information Sessions for Round 3 of consultation. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael and Don Parkinson of AtkinsRéalis provided their email address and phone number if WAFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 3 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team held a virtual session as part of Consultation Round 3 for Wapakeka First Nation (WAFN). An Oji Cree translator provided real-time translation of all meeting content. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 3 Part 1 presentation that began with a review of the project to date, followed by a discussion of preliminary results for two valued components: surface water and fish and fish habitat. Participants were informed that the unabridged version of the presentation was available on the website and that this version reported preliminary results for several other valued components. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from WAFN were in attendance.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Carolina Montrose and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Brennan Sainnawap of Wapekeka First Nation with an attached invitation for the Three Road Project Gathering & Expo hosted by Webequie First Nation (WFN) and Marten Falls First Nation (MFFN), The invitation noted that the event was funded by the Province of Ontario, our Treaty Partner and that it would be held in Thunder Bay on June 11-13, 2024. The invitation also noted the need to continue the momentum of the last two gatherings which focused on Aboriginal and/or Treaty Rights and Interests. In addition, the invitation notes that the Gathering & Expo will provide participants with an engaging and interactive space for consultation to learn more about the projects, ask questions, and share feedback focusing on water, peatlands and building roads on peatlands. Day 1 will be specifically for an Elders gathering, providing a comfortable space for Elders to gather and discuss the Projects. The invitation provided funding information and an email address to access the funding.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap with a letter attached to the email regarding the planned early circulation of the draft Environmental Assessment Report / Impact Statement (EAR/IS). The letter advised that the Project team is planning an early circulation of the draft EAR/IS to provide the opportunity for WAFN to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. The letter explained that the team anticipates the draft EAR/IS to occur in late fall or early winter of the fiscal year 2024/2025 which will provide communities with an extended review period of 60-days to provide their review and comments. The letter explained that the team would follow up with the community as the project moves closer to the circulation of the draft EAR/IS, including the community would like to receive the document (electronic and/or hard copy). The letter explained that the Province of Ontario continues to offer funding agreements with eligible communities to participate in the EA/IA process for the WSR Project, including the review of the draft and final EAR/IS through the Participant Funding Initiative, and therefore will be following up to discuss resources needed by the community to take part in the extended review period of the draft EAR/IS. Michael provided his contact information for any questions or comments.

Topics to be Discussed: Consultation Progress Report Round 3
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 3. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 3. The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that next steps will involve engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement, including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. The letter noted that the future engagement and consultation sessions for communities are tentatively scheduled to start in Winter 2024/2025. Michael's email and cell phone contact information was provided if WAFN has any questions or comments.

Topics to be Discussed: Consultation Progress Report Round 3 File Transfer
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) sent an email to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap with a letter attached regarding follow up for the Consultation Progress Report for Round 3. The letter indicated that on November 5, 2024, the Project team mailed a package via Canada Post to the community containing the Consultation Progress Report for Round 3. The letter also indicated that due to the Canada Post strike which began on November 15, 2024, there has been a delay to the delivery of the report and the team will be sending the files via WeTransfer in a separate email.

The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. A list of key milestones and topics covered in the round of consultation was provided. The letter indicated that the WSR Project Team is available for additional engagement sessions and provided a list of engagement options. Michael's email and cell phone contact information was provided if WAFN has any questions or comments.

Topics to be Discussed: Winter 2025 Field Notice
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) sent an email to Wapekeka First Nation's (WAFN) Chief Brennan Sainnawap with a winter field notice attached. The field notice indicated that field work has been scheduled to take place from February 19-March 1st, 2025 to manually remove caribou GPS radio tracking collars. The notice indicated that the collars were placed on the caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, the collars were set to automatically release in February 2024, however not all collars released as intended. The notice explained that a specifically trained team will manually remove collars without harming the animal. The notice also provided information on what to expect and where the team may need to travel but noted that the field team may need to travel outside the study area boundaries. A map was provided on the second page of the notice.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Brennan Sainnawap of Wapekeka First Nation (WAFN) with an attached letter regarding early circulation of the Draft Environmental Assessment Report / Impact Statement (Draft EAR/IS) for Review for the WSR Project. The letter advised the community that the Draft EAR/IS is now available for the community to review. The letter provided an overview of what is documented in the Draft EAR/IS and explained that it is being circulated in two stages to provide communities with an extended review period to provide comments on the document for a total of 120 days. The two stages of circulation are: 1) Early access for Indigenous communities from June 9 to October 7, 2025, and 2) Public and Stakeholders from August 8 to October 7, 2025. The letter explained that enclosed in the package is the Draft EAR/IS for the WSR Project for review which includes: One hard copy of the main body of the Draft EAR/IS, an electronic copy of the Draft EAR/IS and Appendices, and one hard copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree, and Cree. The letter also provided a link to the Draft EAR/IS on the Project website. The letter also noted that the draft Record of Consultation and Engagement with Indigenous communities, public, and stakeholders is not included in the Draft EAR/IS, but will be provided to the community when the Draft EAR/IS is released for public and stakeholder review on August 8, 2025. In the interim, consultation and engagement activities received from the communities is documented in the Consultation Progress Reports for Rounds 1, 2, and 3, previously sent to the community at key milestones in the EA/IA process, and can also be found on the Project website. The letter encouraged the community to actively participate in the review of the Draft EAR/IS and provided an email and/or mailing addresses to submit comments. For any questions or to schedule a meeting with the Project Team, Michael also provided his email and phone number.

Webequie Supply Road Project Consultation Log

Records Found: 1

Wapekeka First Nation — First Nation Community

Contact Date: Jun 10, 2025 10:19 Method: Phone
Topics to be Discussed: Coordination of Hand Delivery of Draft EAR/IS
McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team phoned the band office of Wapekeka First Nation (WAFN) to try and coordinate a ride for the WSR Project team from the airport but there was no answer and no option to leave a voicemail.

Contact Date: Jun 10, 2025 10:34 Method: E-mail
Topics to be Discussed: Coordination of Hand Delivery of Draft EAR/IS
McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Cynthia Sainnawap of Wapekeka First Nation (WAFN) indicating that she has tried to contact the WAFN band office but hasn't been able to get through by phone. McKenna explained that there are two representatives from the WSR Project team who are coming to the community in the afternoon and are expected at noon to deliver a package since Canada Post has been on strike. McKenna explained that she is looking to coordinate a ride for the team from the airport when they arrive and apologized for the short notice. She provided her phone number and requested Cynthia to call her.

10:42
Cynthia responded to McKenna's email indicating that she will relay the message and have someone pick up the team. She also provided the contact information for Zac Tait who is a Program Manager for WAFN.

10:44
McKenna thanked Cynthia for her help and indicated she would call or text Zac's number if the plane gets delayed.

Contact Date: Jun 10, 2025 11:10 Method: Phone
Topics to be Discussed: Hand Delivery of Draft EAR/IS
A community member from Wapekeka First Nation (WAFN) phoned McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team. The individual indicated that they could pick up the Project team from the airport. McKenna indicated that she would confirm the charter's scheduled time of arrival and get back to the individual once she had an update.

Contact Date: Jun 10, 2025 11:55 Method: Hand Delivered Letter
Topics to be Discussed: Hand Delivery of Draft EAR/IS
Tony McGuire and Adrien Harpel of TheyMedia went to Wapekeka First Nation (WAFN) to hand deliver the hard copy of the Draft Environmental Assessment Report / Impact Statement (EAR/IS) on behalf of the Webequie Supply Road (WSR) Project team. The following documents were included in the package: One hard copy of the main body of the Draft EAR/IS, an electronic copy via USB of the Draft EAR/IS and Appendices, and one hard copy of the Plain Language Summaries for each section of the Draft EAR/IS in English, Cree, and Oji-Cree. Tony attempted to deliver the package to the band office, but WAFN did not accept the delivery. WAFN indicated that they would think about taking delivery after the community deals with the wildfires and their leadership has a chance to meet about Bill 5.

WSR
WEBEQUIE
SUPPLY ROAD

November 2, 2021

Dear Chief,

On October 8th, 2021, after extended consultations, the Minister of the Environment, Conservation and Parks approved the final Terms of Reference with amendments for the Webequie Supply Road (WSR) project. You can find these amendments on the following website: https://www.ontario.ca/page/webequie-supply-road-project We are now proceeding with the environmental assessment in accordance with the approved Terms of Reference.

As part of the WSR communication and engagement activities, the project team produces regular project newsletters, which you find enclosed a number of copies for distribution to your community members.

If you have any questions, please do not hesitate to ask or phone me at 807-472-6147. We wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road

WSR240-WEB-PR-LT-0299 Web-WSR letter to Chiefs re Newsletter and approved ToR-2021-11-01

November 22, 2021

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment studies. This upcoming week, **WSR Presents: Caribou and Wolverine/Wildlife and Wildlife Habitat/Species at Risk/Breeding Birds.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 23rd at 2:00-3:00 (EST)**. We encourage you and your community members to listen, for this will give your community membersthe opportunity to ask questions. You may call during the radio show at the **toll-free number:1-844-424-0500.**

In addition, the live streaming event is scheduled on the same day as the above radio show at **4:00pm – 4:30pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. All sessions are recorded and accessible on YouTube, you can subscribe at: Webequie Supply Road - YouTube. We have regular updates on our Facebook page that features community photos, informative videos, Frequently Asked Questions along with project information. You can follow WSR on Facebook at Supply Road | Facebook, Twitter, Instagram and http://www.linkedin.com/company/wfnsupplyroad You may also call with questions on the same toll-free number provided above during the live streams.

The WSR Project Team is offering opportunities of engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the WSR Project.

Engagement Options

Method	Description
Focus Group Sessions	With proper Covid-19 protocols in place, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment studies. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse groups(women, elders, youth, land users, etc.)
Community Sessions	With proper Covid-19 protocols in place, community information sessions can be conducted, whereby the WSR Project Team will discuss the Environmental Assessment process with a question-and-answer period at the end of the presentation.
Drop-in Sessions	With proper Covid-19 protocols in place, community members can drop-in at a safe location todiscuss the Environmental Assessment process with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment process facilitated by the WSR Project Team using Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the Environmental Assessment process to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the Environmental Assessment studies presentation and set up a conference call number to go through the presentation based on the area of interest your team wants to focus on and answer any questions.
Local Radio Call In Show	Using the local community radio, the WSR can present the Environmental Assessment studies with a local translator that the WSR will pay for and explain the Environmental Assessmentprocess. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Environmental Assessment process.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching the WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, then we can mail these hardcopy WSR poster to your community for local distribution and all you need to do is email or call us to inform us that you need hardcopies of WSR poster.

Lastly, given the high and daily usage of social media channels by Indigenous leaders and members, you, your Council, and your staff can also follow us on Facebook, Twitter, Instagram, and LinkedIn to stay updated and repost it on your social media accounts to assist in information access, information dissemination, and information request associated with the WSR Project's environmental studies.

To obtain information on the Project, or to provide comments, please visit our website at http://www.supplyroad.ca or contact me at 807-472-6147.

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road
michael.fox@supplyroad.ca

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Don Parkinson, Consultation Lead, SNC-Lavalin Inc.

INDIGENOUS KNOWLEDGE / INDIGENOUS LAND AND RESOURCE USE PROGRAM FOR THE WEBEQUIE SUPPLY ROAD PROJECT

Information Sharing Agreement

Purpose

The purpose of the Indigenous Knowledge and Land and Resource Use (IKLRU) Program Sharing Agreement is to:

- Document the shared understanding of how the Wapekeka First Nation IKLRU Study for the Webequie Supply Road Project will be completed;
- Document the anticipated activities that will be part of the IKLRU Program; and
- Document how IKLRU information will be integrated into the Environmental Assessment Report (EAR) / Impact Statement (IS).

Confidentiality and IK / TLU Sharing

- Webequie First Nation acknowledges that all IKLRU information is the property of Wapekeka First Nation and the individual knowledge holders who contributed to the study.
- Webequie First Nation will disclose the IKLRU as required through the regulatory process only.
- Webequie First Nation will store the IKLRU information in a secure location and it will be provided to the appropriate Project staff and consultants only.
- Webequie First Nation will use the IKLRU information to contribute to the EAR / IS.
- Webequie First Nation will not include the full IKLRU report or study in the EAR / IS.
- Webequie First Nation will provide relevant IKLRU information to the appropriate disciplines for use in their EAR / IS sections.
- Webequie First Nation will use the IKLRU information to assess impacts on Wapekeka First Nation land and resource use; thus, the IK section of the EAR / IS will summarize the IKLRU information without disclosing specific locations of use.
- Webequie First Nation will use the IKLRU information for the Project regulatory process only, including planning, design, assessment, construction, operation, maintenance and decommissioning.

IKLRU Study

Wapekeka First Nation and Webequie First Nation agree that the type of information in the IKLRU Study Plan and scope will be included in the IKLRU Study.

The IKLRU Study will include information about the geographic location of data collected. This can be as numerical coordinates or as a location on a map with appropriate reference points.

Webequie First Nation will accept any additional land and resource use-related information within the IKLRU Study Area, as community members deem appropriate.

Wapekeka First Nation and Webequie First Nation agree that upon completion of the IKLRU Study, Wapekeka First Nation will approve the Report for use in the EAR / IS.

Signing this Agreement

Wapekeka First Nation signing of this Sharing Agreement is no way represents their support for the Webequie Supply Road Project.

Re: Indigenous Knowledge / Indigenous Land and Resource Use Program for the Webequie Supply Road Project

Dear Chief Brennan Sainnawap,

We hope that this letter finds you and your community well.

Webequie First Nation (WFN) is the proponent of the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will extend from Webequie Airport to the mineral deposit area near McFaulds Lake as shown in the enclosed project map. WFN has started the provincial environmental assessment (EA) and a formal Notice of EA Commencement was issued on October 29th, 2021. The WSR Project is also subject to a federal impact assessment (IA) and the Notice of Commencement of the IA was issued on February 24th, 2020. Collectively the EA and IA are referred to as the “assessments” and will examine potential effects of the WSR Project including mitigation and monitoring, and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS). We will continue to provide you with updates as the assessment process continues, and welcome and appreciate your input throughout the planned consultation and engagement activities.

With this letter, we would like to share with you that we are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program for the Project. The IKLRU Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

The purpose of the IKLRU Program is to:

- Promote sharing of IKLRU information relevant to the Project;
- Help identify potential impacts of the Project, including those on Indigenous rights and interests; and

- Collaborate and work with Indigenous communities to enhance positive impacts or to identify measures to avoid/reduce potential effects on Indigenous rights and interests.

As traditional stewards of the land, we all must make certain that development in the area appropriately addresses the rights, interests, values, traditions, concerns, and aspirations of Indigenous communities within the assessment context, during the life of the WSR Project, and beyond. It is in this spirit that we invite Wapekeka First Nation to participate in the IKLRU program.

The IKLRU Program for the WSR Project will occur in two phases:

1. Collecting existing Indigenous Knowledge and information on Indigenous land and resource use that communities are prepared to share with WFN in order to help inform the early stages of the assessments; and
2. Completing project-specific Indigenous Knowledge and Lands & Resource Use studies, or compiling information/data in other form, that can be provided to the Project Team for integration into the assessment.

At this point, we are enquiring whether Wapekeka First Nation is interested in participating in the IKLRU Program in either (or both) phases of the Program. We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the IKLRU Program for the WSR Project. In addition, the Project Team can help communities access this funding, where applicable.

While the IKLRU Program is distinct from the Consultation Program for the WSR Project, the two are complementary and collectively serve to solicit Indigenous perspectives, values and inputs with respect to project planning and assessment process. You may share as much or as little IKLRU information as you wish, and in whatever form you prefer. Your community will also have the opportunity to review the EAR / IS to ensure accuracy of IKLRU information, including if it has been adequately, appropriately, and respectfully represented within the assessment process.

While there are significant benefits to integrating Indigenous Knowledge from your community in the assessment, we also recognize that this knowledge belongs to your community and that confidentiality needs to be respected. Our approach to working with your community on the IKLRU Program will be guided by the following key principles:

- The people of your community are a source of knowledge on uses of the land and its resources, associated cultural practices, and community values.
- We are your partner – our goal is to work together with you to conduct the IKLRU Program in a way that contributes to your community's well-being so that Indigenous Knowledge and land and resource use information can be meaningfully integrated into the assessment process.

Protection and confidentiality of IKLRU information is of the utmost importance to the Project Team. To honour and respect this important information, we propose establishing an Indigenous Knowledge Sharing Agreement with your community prior to the collection and use of your community's information. The Sharing Agreement would outline how confidential and sensitive information would be utilized in the WSR Project's assessment and design process. It would also adhere to all community-specific protocols and OCAP (ownership, control access and possession) principles. Once you've confirmed participation in the IKLRU Program, we will work with you to prepare the Sharing Agreement. We have attached a draft Indigenous Knowledge Sharing Agreement for your review and consideration.

In order to confirm that Wapekeka First Nation is interested in participating in the IKLRU Program, we ask that you contact us by January 27, 2022. Our Project Team will also reach out to you in a few days if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council to discuss next steps, including the methods and protocols your community will follow.

To express your community's interest or if you have any questions regarding the IKLRU Program or the WSR Project, please feel free to contact Michael Fox (807-472-6147; michael.fox@indigenousengagement.ca) or Brianna Patrick (204-223-5770; brianna.patrick@indigenousengagement.ca) of the Project Team.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Chief Cornelius Wabasse
Webequie First Nation

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Brennan Sainnawap,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as "the assessments" and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite Wapekeka First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

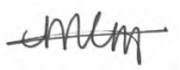
Next Steps

In order to confirm that Wapekeka First Nation is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,



Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist

Project Map

February 4, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment and Impact Assessment (EA / IA) process. This upcoming week's session is: **WSR Presents: EA / IA Process.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 9th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is exploring virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

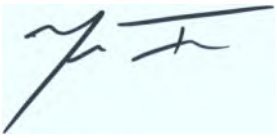
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

February 18, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Indigenous Knowledge. This upcoming week's session is: **WSR Presents: Indigenous Knowledge - Part 1.** The Project Team has planned an Indigenous Knowledge series, this upcoming week being the first part to that series.

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 23rd, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to brianna.patrick@indigenousknowledge.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

WEBEQUIE SUPPLY ROAD (WSR) PROJECT

Socio-Economic Study Plan
Fact Sheet

What is the primary purpose of the Socio-Economic Study Plan?

To characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) as a result of the construction and operation/maintenance of the WSR. Provide recommendations for minimizing negative socio-economic effects and enhancing beneficial effects of the Project.

What are socio-economics?

Studying socio-economics provides information about current jobs, income, education and housing conditions in a community.

What kind of information is going to be gathered?

- Community values;
- Community demographics (age, gender, marital status, education, labor force activity, health, etc.);
- The type of access each community has to education, jobs, or transportation; and
- Well being and safety.

Who is the information being gathered from?

- The 22 Indigenous communities that have been identified as the ones whose established or asserted Aboriginal and Treaty rights may be adversely affected by the Project and/or may have interests in the project.

WSR240-WEB-PR-FS-0016 Web-Socio Economic Fact Sheet-English-website-2022-04-26

*The Project Team will respect protocols and work with each community to understand how the information will be transferred, stored, and applied, and will be protected and kept confidential.

How is the information on community socio-economics being collected?

Primary information will be collected from Indigenous communities:

- A socio-economic survey using Survey Monkey, which will be sent by e-mail/letter;
- Key informant interviews with Chief and Councils, band administration staff, social service providers, healthcare providers, and knowledge keepers; and
- Collection of Indigenous knowledge through engagement activities.

Secondary information will be collected and reviewed:

- Published data from government websites, Indigenous community websites, municipal websites, and other open-source data. This information will be used to identify community demographics, community infrastructure, community social services, etc.

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Brennan Sainnawap,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as "the assessments" and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite Wapekeka First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

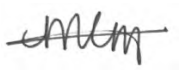
Next Steps

In order to confirm that Wapekeka First Nation is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,



Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

Project Map

April 29, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on air quality and noise & vibration. This upcoming week's session is: **WSR Presents: Air Quality + Noise & Vibration.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **May 4th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

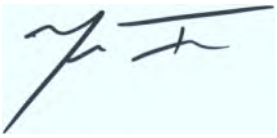
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

April 29, 2022

June 24, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on cultural heritage This upcoming week's session is: **WSR Presents: Cultural Heritage.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 29th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

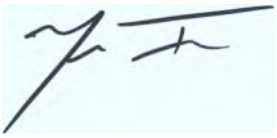
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

July 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

The WSR Project Team is currently hosting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

If the WSR Project Team has already hosted a virtual information session for your community, you can watch the recording of your community's session at: **supplyroad.ca/sessions/**. You can leave questions or comments at any time on your community's page and the Project Team will provide a response. If the WSR Project Team has not yet hosted a virtual information session for your community, you can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

The WSR Project also has a YouTube channel where we post informational videos, past livestreams and radio shows, and communication materials. Please visit:
https://www.youtube.com/channel/UCh_heAjQoY2hPBPMr68MCzw

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 25, 2022

Dear Chief Sainnawap,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps.

We will be offering a community information session, via Zoom, on **Monday, August 8 between 12pm and 1:30pm** for Wapekeka First Nation, where there will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 1.5 hours in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://maverickav.zoom.us/meeting/register/tZYrdu6spzoiHNYEtrT6Xm3er-dLe64bXR61.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: Meeting ID: 826 1749 1862 & Passcode: 631616.

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/wapekeka/.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Lead
Webequie Supply Road

July 26, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Socio-Economic Primary Data Collection Program

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socioeconomic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. You can find more information regarding the program on the WSR website: https://www.supplyroad.ca/ik-and-socio-economic/

We would like to invite your community to participate in the WSR socio-economic primary data collection program. To express your community's interest or if you have any questions regarding the socio-economic primary data collection program for the WSR Project, please feel free to contact Marian Tibor-McMahon at 416-668-3298 or marian@indigenousengagement.ca.

At any time, you can access additional information on the WSR website: **supplyroad.ca.** You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

The WSR Project also has a YouTube channel where we post informational videos, past livestreams and radio shows, and communication materials. Please visit:

August 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Consultation Round 2

Throughout the EA/IA phase, the Project Team conducts studies to gather information on a wide range of topics and consults with Indigenous communities, members of the public, and other stakeholders, to evaluate the Project and its potential effects. This month we are concluding our Consultation Round 1 and will be moving into Round 2, before the final Round 3.

We encourage community members to watch their information session at **supplyroad.ca/sessions/** where you can find your community-specific page.

Consultation Round 2 will focus on the following topics:

- Summary of input received from Consultation Round 1
- Identification and evaluation of alternatives
- Preliminary recommended preferred route and supportive infrastructure (aggregate/rock source areas, construction camps, access roads), including rationale for selection
- Preliminary engineering design elements of WSR (bridges/culverts)
- Next steps and schedule

Stay tuned with the WSR Project by following our social media channels:

November 2, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week featuring our special guest storyteller/comedian Ron Kanutski. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations – Fish and Fish Habitat.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 8th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

November 17, 2022

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Biweekly Radio and Livestreaming Series is Back

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Building Roads in Muskeg Areas/James Bay Lowlands.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **Tuesday, November 22nd, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.

Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Other Ways to Stay Up To Date

You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.
On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

WSR
WEBEQUIE
SUPPLY ROAD

December 14, 2022

Chief Brennan Sainnawap
Wapekeka First Nation
P.O. Box 2
Angling Lake, ON
P0V 1B0

Dear Chief Sainnawap:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. On November 2, 2022, a notice card was left indicating when and where to pick up the package. As of today, December 14, 2022, the package has not been picked up by your community.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

WSR WEBEQUIE SUPPLY ROAD

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.

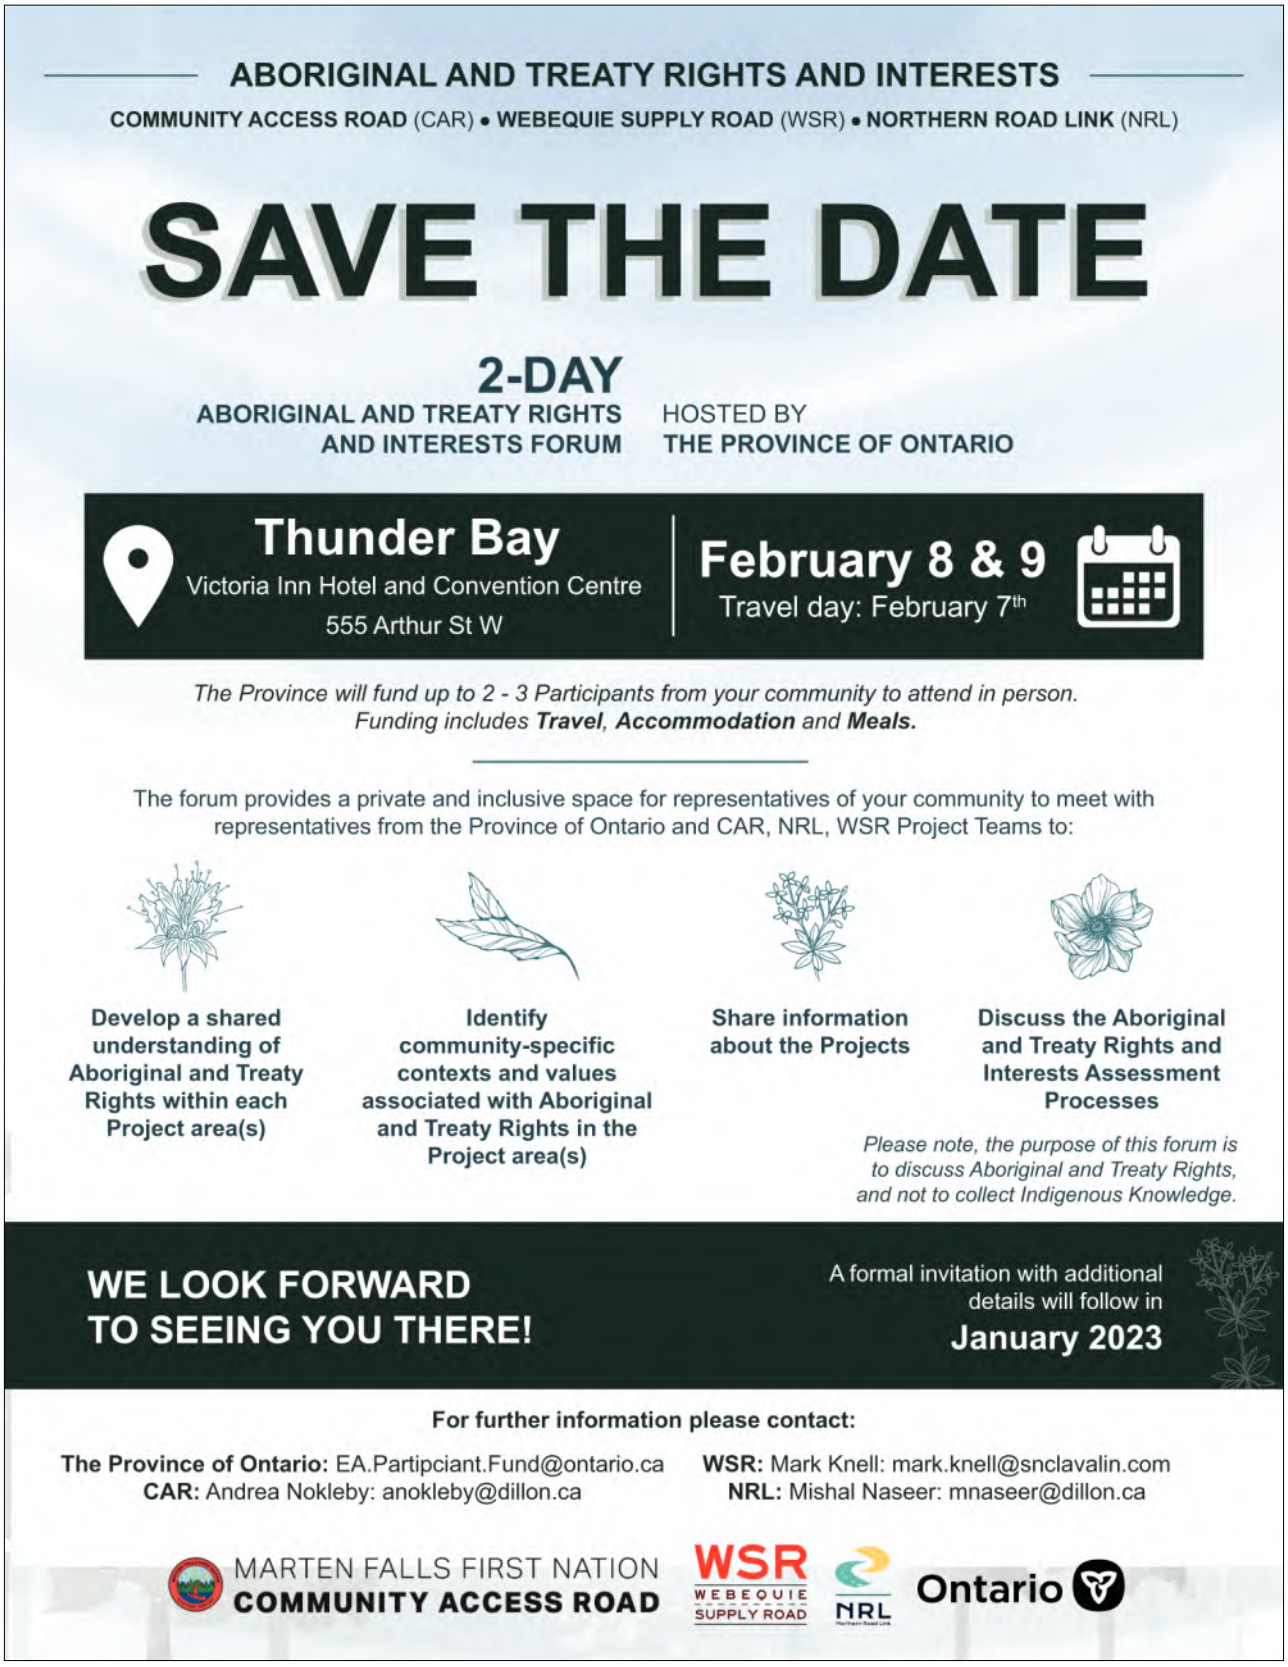
Activity Date: Dec 20, 2022 16:02
File Name: Save the Date - 2 Day Aboriginal and Treaty Rights and Interests Forum - Thunder Bay February 2023.pdf
Activity Method: E-mail
Date Published: Dec 20, 2022



ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS
WEBEQUIE SUPPLY ROAD (WSR) • MARTEN FALLS FIRST NATION COMMUNITY ACCESS ROAD (MFFN CAR) • NORTHERN ROAD LINK (NRL)
YOU ARE INVITED!
2-DAY ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS FORUM
HOSTED BY THE PROVINCE OF ONTARIO
Thunder Bay
Victoria Inn Hotel and Convention Centre
555 Arthur Street West
February, 8 & 9 2023
Webequie First Nation and Marten Falls First Nation encourage you to participate in a 2-day forum focused on discussing potential impacts to northern Indigenous communities' Aboriginal and/or Treaty Rights and Interests as they relate to the following Projects:
Webequie Supply Road (WSR) • Northern Road Link (NRL)
Marten Falls First Nation Community Access Road (MFFN CAR)
Participant Funding
The Province of Ontario will fund up to 3 representatives from your community to attend, including travel, accommodation and meals. All questions about funding or the coordination of funding should be directed to the Province of Ontario at ea.participant.fund@ontario.ca.
Additional community representatives are welcome to attend.
Purpose
The Purpose of this Forum is to create a respectful, culturally-sensitive, and collaborative space to develop an understanding of Aboriginal and/or Treaty Rights and Interests in any of the Project areas (WSR, MFFN CAR, and NRL) as your Aboriginal and/or Treaty Rights and Interests and Interests may be impacted by these Projects. Please note the purpose of this event is to discuss Aboriginal and/or Treaty Rights and Interests and not to collect Indigenous Knowledge.
Who Should Attend from your Community
Representatives who are knowledgeable about and comfortable speaking to the Rights and Interests of your community in any of the Project areas are encouraged to attend.
RSVP to ea.participant.fund@ontario.ca by January 27th
(note that you can still attend without an RSVP)

Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Thank you very much and we look forward to hearing from you soon.

Activity Date: Feb 01, 2023 12:07
Activity Method: E-mail
File Name: Invitation - 2 Day Aboriginal and Treaty Rights and Interests Forum - Thunder Bay February 2023.pdf
Date Published: Feb 1, 2023

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS

WEBEQUIE SUPPLY ROAD (WSR) • **MARTEN FALLS FIRST NATION COMMUNITY ACCESS ROAD** (MFFN CAR) • **NORTHERN ROAD LINK** (NRL)

YOU ARE INVITED!

2-DAY ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS FORUM

HOSTED BY THE PROVINCE OF ONTARIO

Thunder Bay
Victoria Inn Hotel and Convention Centre
555 Arthur Street West

February, 8 & 9 2023

Webequie First Nation and Marten Falls First Nation encourage you to participate in a 2-day forum focused on discussing potential impacts to northern Indigenous communities' Aboriginal and/or Treaty Rights and Interests as they relate to the following Projects:

Webequie Supply Road (WSR) • **Northern Road Link** (NRL)
Marten Falls First Nation Community Access Road (MFFN CAR)

Participant Funding

The Province of Ontario will fund up to 3 representatives from your community to attend, including travel, accommodation and meals. All questions about funding or the coordination of funding should be directed to the Province of Ontario at **ea.participant.fund@ontario.ca**.

Additional community representatives are welcome to attend.

Purpose

The Purpose of this Forum is to create a respectful, culturally-sensitive, and collaborative space to develop an understanding of Aboriginal and/or Treaty Rights and Interests in any of the Project areas (WSR, MFFN CAR, and NRL) as your Aboriginal and/or Treaty Rights and Interests may be impacted by these Projects. *Please note the purpose of this event is to discuss Aboriginal and/or Treaty Rights and Interests and not to collect Indigenous Knowledge.*

Who Should Attend from your Community

Representatives who are knowledgeable about and comfortable speaking to the Rights and Interests of your community in any of the Project areas are encouraged to attend.

RSVP to ea.participant.fund@ontario.ca by January 27th
(note that you can still attend without an RSVP)

March 9, 2023

Dear Chief,

Radio Show and Livestream

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: The Alternatives Assessment Process – An Overview.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on March 14th, 2023 at 12:00pm - 1:00 pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team will begin virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Chief Brennan Sainnawap
Wapekeka First Nation
P.O. Box 2
Angling Lake, ON
P0V 1B0

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Sainnawap,

We hope that this letter finds you and your community well.

As you know from our previous correspondence, Webequie First Nation is the proponent of the Webequie Supply Road Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities.

Today, we are writing to confirm whether your community has an interest in participating in the Socio-Economic Primary Data Collection Program and is follow-up to the invitation letter sent to you on December 20, 2021. In this letter, we outlined the purpose of the socio-economic study, types of information we would like to gather and suggested primary data collection methods (e.g., community surveys, focus groups, key informant interviews). Primary data is information collected first-hand directly with community members about issues and conditions of the community.

We have a timeframe for the EA/IA process to complete our studies and document the results. Our goal this year is to complete a draft Socio-Economic Existing Conditions Report, which documents the socio-economic baseline conditions of communities. We would like to collaborate with your community to discuss and collect socio-economic information and/or verify information gathered to-date based on current desktop research to help us to understand existing social and economic conditions.

The preliminary “Valued Components” for the EA/IA, which represent aspects of social and economic conditions that are important to you and the community, and require information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;

- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

In order to meet the schedule for the completion of the EA/IA study, we respectfully request an indication of your community's interest in participating in the Socio-Economic Primary Data Collection Program by **April 17, 2023**, as it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by **June 16, 2023.**

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Heather Swan, Deputy Project Manager
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Michael Fox, Regional Consultation Coordinator, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

March 22, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Alternatives Routing in the Preferred Corridor.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, March 28th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

April 11, 2023

Dear Chief Sainnawap,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.
