Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Sample ID	Drillhole ID	From	To	Lithology	Area	Class	Copper	Iron	Gallium	Germanium	Potassium	Lanthanum	Lithium	Magnesium	Manganese	Molybdenum

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-7 Four Acid Metals

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

(1) Provincial Water Quality Objectives.

(2) Provincial Water Quality Objectives Interim.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

(1) Provincial Water Quality Objectives.

(2) Provincial Water Quality Objectives Interim.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-8. SFE Results

Sample ID	Drillhole ID	From	To	Lithology	Area	Class	Sample Weight	Volume of DI Water Used	pH	Conductivity	Acidity	Alkalinity	Sulphate	Aluminum Dissolved	Antimony Dissolved	Arsenic Dissolved	Beryllium Dissolved	Boron Dissolved

(1) Provincial Water Quality Objectives.

(2) Provincial Water Quality Objectives Interim.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

(1) Provincial Water Quality Objectives.

(2) Provincial Water Quality Objectives Interim.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-8. SFE Results

Sample ID	Drillhole ID	From	To	Lithology	Area	Class	Cadmium Dissolved	Calcium Dissolved	Chromium Dissolved	Cobalt Dissolved	Copper Dissolved	Iron Dissolved	Lead Dissolved	Magnesium Dissolved	Mercury Dissolved	Molybdenum Dissolved	Nickel Dissolved	Phosphorus Dissolved

(1) Provincial Water Quality Objectives.

(2) Provincial Water Quality Objectives Interim.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-8. SFE Results

(1) Provincial Water Quality Objectives.

(2) Provincial Water Quality Objectives Interim.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

(1) Provincial Water Quality Objectives values

(2) Provincial Water Quality Objectives interim values

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-8. SFE Results

(1) Provincial Water Quality Objectives.

(2) Provincial Water Quality Objectives Interim.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

(1) Provincial Water Quality Objectives.

(2) Provincial Water Quality Objectives Interim.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-8. SFE Results

Sample ID	Drillhole ID	From	To	Lithology	Area	Class	Selenium Dissolved	Silver Dissolved	Thallium Dissolved	Tungsten Dissolved	Uranium Dissolved	Vanadium Dissolved	Zinc Dissolved	Zirconium Dissolved

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Table B-8. SFE Results

(1) Provincial Water Quality Objectives values

(2) Provincial Water Quality Objectives interim values

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

A value of "--" indicates metal was not measured for the given sample; the variation in elements analyzed is due to measurement at two different laboratories (see text).

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

"Other" lithology refers to the following minor lithologies: Metasediment 1, Ultramafic, Calcite Vein, Intrusive Breccia, Felsic Fragmental, Rhyolite, and Sericite Schist.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

"Other" lithology refers to the following minor lithologies: Metasediment 1, Ultramafic, Calcite Vein, Intrusive Breccia, Felsic Fragmental, Rhyolite, and Sericite Schist.

Table B-9. Shake Flask Extraction (SFE) Statistical Summary

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

"Other" lithology refers to the following minor lithologies: Metasediment 1, Ultramafic, Calcite Vein, Intrusive Breccia, Felsic Fragmental, Rhyolite, and Sericite Schist.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

"Other" lithology refers to the following minor lithologies: Metasediment 1, Ultramafic, Calcite Vein, Intrusive Breccia, Felsic Fragmental, Rhyolite, and Sericite Schist.

Table B-9. Shake Flask Extraction (SFE) Statistical Summary

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

"Other" lithology refers to the following minor lithologies: Metasediment 1, Ultramafic, Calcite Vein, Intrusive Breccia, Felsic Fragmental, Rhyolite, and Sericite Schist.

Blue highlighting indicates metal concentrations greater than the PWQO screening value.

Bolded text indicates metal concentrations greater than the interim PWQO screening value.

Screening values are for qualitative assessment only and hold no regulatory significance.

Classification as mine rock or ore-grade materials was based on gold content.

"Other" lithology refers to the following minor lithologies: Metasediment 1, Ultramafic, Calcite Vein, Intrusive Breccia, Felsic Fragmental, Rhyolite, and Sericite Schist.

Classification as mine rock or ore-grade materials was based on gold content.

Additional cycles of NAG leachate were conducted as required based on the recommendations in MEND.

Table B-10. NAG Leachate Results

Sample ID	Drillhole ID	From	To	Lithology Group	Area	Class	NAG Cycle	Chromium	Copper	Iron	Magnesium	Molybdenum	Nickel	Phosphorus	Lead	Antimony	Selenium	Thallium	Uranium	Vanadium	Tungsten	Zinc

Classification as mine rock or ore-grade materials was based on gold content.
Additional cycles of NAG leachate were conducted as required based on the recommendations in MEND.

Blank cells indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

Zero values indicate that the mineral was included in the refinement but not identified by the analyst.

Bold italicized blue values indicate uncertainty in the reported value as reported by the analyzing laboratory.

The weight percent quantitied indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Classification as mine rock or ore-grade materials was based on gold content.

Blank cells indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

Zero values indicate that the mineral was included in the refinement but not identified by the analyst.

Bold italicized blue values indicate uncertainty in the reported value as reported by the analyzing laboratory.

The weight percent quantitied indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Classification as mine rock or ore-grade materials was based on gold content.

Blank cells indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

Zero values indicate that the mineral was included in the refinement but not identified by the analyst.

Bold italicized blue values indicate uncertainty in the reported value as reported by the analyzing laboratory.

The weight percent quantitied indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Classification as mine rock or ore-grade materials was based on gold content.

Blank cells indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

Zero values indicate that the mineral was included in the refinement but not identified by the analyst.

Bold italicized blue values indicate uncertainty in the reported value as reported by the analyzing laboratory.

The weight percent quantitied indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Classification as mine rock or ore-grade materials was based on gold content.

Blank cells indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

Zero values indicate that the mineral was included in the refinement but not identified by the analyst.

Bold italicized blue values indicate uncertainty in the reported value as reported by the analyzing laboratory.

The weight percent quantitied indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Classification as mine rock or ore-grade materials was based on gold content.

Blank cells indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

Zero values indicate that the mineral was included in the refinement but not identified by the analyst.

Bold italicized blue values indicate uncertainty in the reported value as reported by the analyzing laboratory.

The weight percent quantitied indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Classification as mine rock or ore-grade materials was based on gold content.

Total			100	100	100	100	100	100	100	100

Blank cells indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

Zero values indicate that the mineral was included in the refinement but not identified by the analyst.

Bold italicized blue values indicate uncertainty in the reported value as reported by the analyzing laboratory.

The weight percent quantitied indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Classification as mine rock or ore-grade materials was based on gold content.

Introduction

This report describes a mineralogical test program using High Definition Mineralogy, including chemical assay, QEMSCAN technology (Quantitative Evaluation of Materials by Scanning Electron Microscopy) and electron microprobe analysis (EMPA). The samples are derived from Kinross Gold's Great Bear project located in Red Lake, Ontario. The fifty-three samples were submitted by representatives from WSP on behalf of Kinross. The purpose of this test program was to determine the overall mineral assemblage, and the liberation and association of sulphide, carbonate, and silicate minerals. The main objective was to use the QEMSCAN modal distribution along with the EMPA data in conjunction to determine the mineral hosts and elemental deportment of arsenic, cadmium, cobalt, copper, molybdenum, lead, arsenic, and zinc.

Testwork Summary

1. Sample Receipt and Preparation

The fifty-three samples were selected and submitted by representatives from WSP and the SGS project number 19032-02 and corresponding Mineralogy LIMS number MI5020-AUG23 was assigned to the testwork.

Most of the samples were received as coarse rejects but some as assay pulps. The coarse reject material was received at a nominal crush size of -9.5 mm or -6.3 mm. A 150-gram portion of the coarse reject samples was stage-crushed to a P_{80} (80% passing) of 150 µm for the polished section preparation for the QEMSCAN and EMPA analysis and a portion for chemical analysis.

Assay pulps were only available for samples DX450204, DX450176, DX450181, DX450002, DX450159, DX450134, DX450077, and DX450021. These were not subjected to further size reduction. Polished sections and assay cuts were prepared directly from those cuts.

The sample inventory along with how each sample was received is presented in Table 1.

Representative subsamples were micro-riffled for additional analysis which included the following:

- Graphite-impregnated polished epoxy grain mount preparation and subsequent PMA analysis by QEMSCAN.
- Assay cuts submitted for whole rock geochemistry (WRA by XRF - GC_XRF76V), arsenic (GC_XRF75F) and multi element ICP analysis (GC_ICP42C). Sulphur and carbon assays were provided.

All QEMSCAN data is presented in Appendix A, the summary of results from the EMPA analysis conducted at Queen's University in Appendix B, the certificate chemical of analysis in Appendix C, the Chemical Assay Mini Methods in Appendix D, and the terminology for liberation and association in Appendix E.

2. QEMSCAN Operational Modes

The mode of QEMSCAN analysis used for this project was Particle Mapping Analysis (PMA). PMA is a two-dimensional mapping analysis aimed at resolving liberation and locking characteristics of a generic set of particles. A pre-defined number of particles are mapped at a point spacing selected in order spatially resolve and describe mineral textures and associations. This mode is often selected to characterize feed and concentrate products, as both gangue and value minerals report in statistically abundant quantities.

It should be noted that the energy dispersive X-ray characteristics for magnetite, hematite, and to a lesser extent, goethite are nearly identical and that these minerals cannot reliably be distinguished by QEMSCAN. Light elements such as lithium, boron, carbon, beryllium, oxygen, and hydrogen cannot be discriminated by the QEMSCAN analysis.

The assay results were also used for QEMSCAN data validation and reconciliation.

3. Mineral List Created with the iExplorer Software and Quality Control

Numerous mineral phases were detected in the suite of the samples. A mineral list was developed with the iExplorer processing software and theoretical formula of each mineral is presented in Table 2. Key QEMSCAN mineralogically calculated assays have been regressed with the chemical assays for the samples, as presented in and Figure 1. Elemental deviation between the calculated QEMSCAN assays and actual assays may occur due to the solid solution chemistry of some minerals.

Table 2: Mineral List and Formulas

Mineral	Mineral Formula
Pyrite	FeS_2
Pyrrhotite	$Fe_{(1-x)}S$
Sphalerite	$(Zn,Fe)S$
Chalcopyrite	$CuFeS_2$
Galena	PbS
Arsenopyrite	$FeAsS$
Cobaltite/Gersdorffite	$CoAsS/NiAsS$
Pentlandite	$(Fe,Ni)_9S_8$
Molybdenite	MoS_2
Quartz	SiO_2
Plagioclase(Anorthite/Bytownite)	$CaAl_2Si_2O_8$
Plagioclase(Labradorite)	$(Ca,Na)(Si,Al)_4O_8$
Plagioclase(Albite/Oligoclase)	$NaAlSi_3O_8$
K-Feldspar	$KAlSi_3O_8$
Biotite	$K(Mg,Fe)Al_2Si_3AlO_{10}(OH)_2$
Sericite/Muscovite	$KAl_2(AlSi_3O_{10})(OH)_2$
Chlorite	$(Fe,(Mg,Mn)_5,Al)(Si_3Al)O_{10}(OH)_8$
Clays	$Al_2Si_2O_5(OH)_4$
Amphibole	$(Na,K)Ca_2(Fe,Mg)_5(Al,Si)_8O_{22}(OH)_2$
Garnet	$Ca_3Fe_2(SiO_4)_3$
Calcite	$CaCO_3$
Dolomite	$CaMg(CO_3)_2$
Ankerite	$Ca(Fe,Mg,Mn)(CO_3)_2$
Fe-Oxides	Fe_2O_3/Fe_3O_4
Rutile	TiO_2
Apatite	$Ca_5(PO_4)_3(F,Cl,OH)$
Sulphates	$CaSO_4/CaSO_4•_2(H_2O)$

Other minerals may include sulphates, other sulphides, carbonates, ilmenite, and other rare minerals

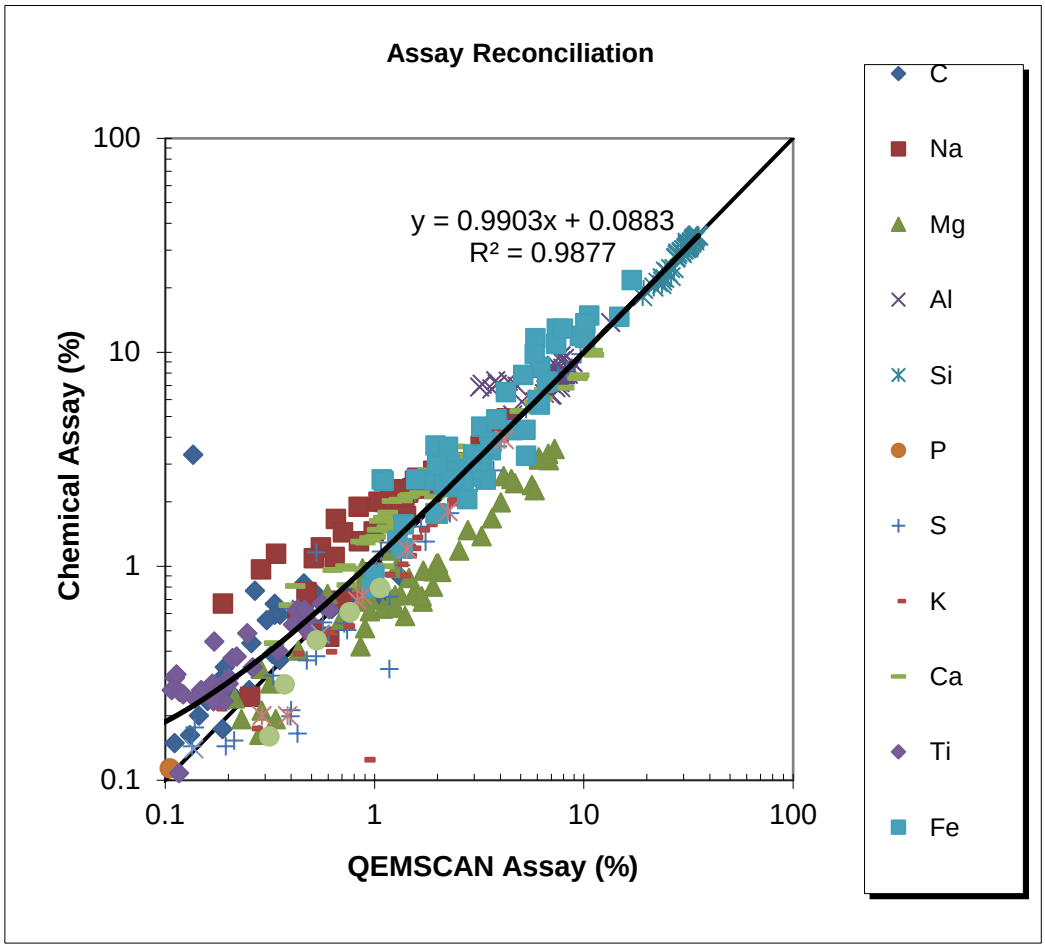

Figure 1: Graphical Illustration of QEMSCAN Calculated and Direct Chemical Assay Reconciliation for All of the Samples

Summary of Results

Fifty-three samples, from Kinross's Great Bear project in Red Lake Ontario, were submitted on behalf of WSP for a detailed mineralogical characterization to determine the mineral hosts of arsenic, cadmium, cobalt, copper, molybdenum, lead, arsenic, and zinc. The study included chemical assays, scanning electron microscopy (SEM), QEMSCAN, and electron microprobe analysis (EMPA). The objective of the QEMSCAN analysis was to determine the overall mineral assemblage with focus on the various sulphide and carbonate concentrations and their liberation and grain size data. The objective of the EMPA was to quantify the overall composition of the minerals in various samples, but to also determine if trace elements are hosted in the various phases (e.g., arsenic in low concentrations in pyrite). The QEMSCAN modal distributions along with the EMPA data were used in conjunction to determine the mineral hosts and elemental deportment of the aforementioned analytes.

The sample preparation and the details of the results are discussed in the main body of the report. The points of interest are discussed in this summary.

4. Sample Inventory and Select Chemical Assays

Table 3 presents the sample inventory and selected assays for each sample. Notes about the select assays:

- Antimony (Sb) and selenium (Se) assays for each sample are below the detection limits (DL's).
- For arsenic (As), many of the analysis are below the detection limits (DL's). The average concentration of the analyses above the DL's is 0.1% and values range from 0.0 to 0.8%. Samples with arsenic concentrations of >0.01% include: DX450052 (0.035%), DX 550083 (0.16%), DX450134 (0.45%), DX450113 (0.054%), DX450143 (0.013%), DX450071 (0.61%), DX450130 (0.28%), DX450039 (0.054%), DX450049(0.014%), and DX450105 (0.79%).
- Cadmium (Cd) was above the DL's in 13 samples which include DX450052 (31 g/t), DX450176 (49 g/t), DX450076 (199 g/t), DX450134 (3 g/t), DX450021 (5 g/t), DX450119 (7 g/t), DX450051 (32 g/t), DX450071 (4 g/t), DX450233 (9 g/t), DX450200 (107 g/t), DX450155 (5 g/t), DX450105 (5 g/t), and DX450170 (3 g/t).
- Cobalt (Co) concentrations average 28 g/t and range from 5.0 g/t to 267.0 g/t. Sample DX450134 is anomalously high in cobalt compared to the other samples at 267 g/t.
- Copper (Cu) concentrations average 169 g/t and range from 5.0 g/t to 3980.0 g/t. Copper in sample DX450134 is 855 g/t and in DX450200 is 3980.0 g/t, which are significantly higher compared to the rest of the samples.

- Molybdenum (Mo) is above the DL's only in three samples which include DX450108 (20 g/t), DX450200 (9 g/t) and DX450155 (32 g/t).
- Nickel (Ni) is below the detection limits in most of the samples. The average concentration of nickel above the DL's is 269 g/t and ranges from 20 g/t to 4830 g/t. Sample DX450134 is exceptionally high in nickel at 4830 g/t compared to the other samples.
- Lead (Pb) is below the detection limits for most of the samples. The average concentration of lead above the DL's is 1167.3 g/t and ranges from 21 g/t to 8990 g/t. Samples with exceptionally high concentrations include DX450052 (4910 g/t), DX450176 (1260 g/t), DX450076 (571 g/t) and DX450051 (8990 g/t).
- Zinc (Zn) concentrations average 1538 g/t and range from 24 g/t to 34500 g/t. Samples with exceptionally high concentrations of zinc include DX450052 (6190 g/t), DX450176 (8840 g/t), DX450076 (34500 g/t), DX450021 (651 g/t), DX450119 (2600 g/t), DX450051 (6250 g/t) and DX450200 (15800 g/t).
- Figure 2 presents the zinc versus cadmium concentrations for the samples mentioned above. Zinc and cadmium show a positive correlation and is in agreement with the fact that Cd is generally hosted in sphalerite.
- Assays with higher concentrations of each element for each sample have been highlighted in yellow in Table 3 below.

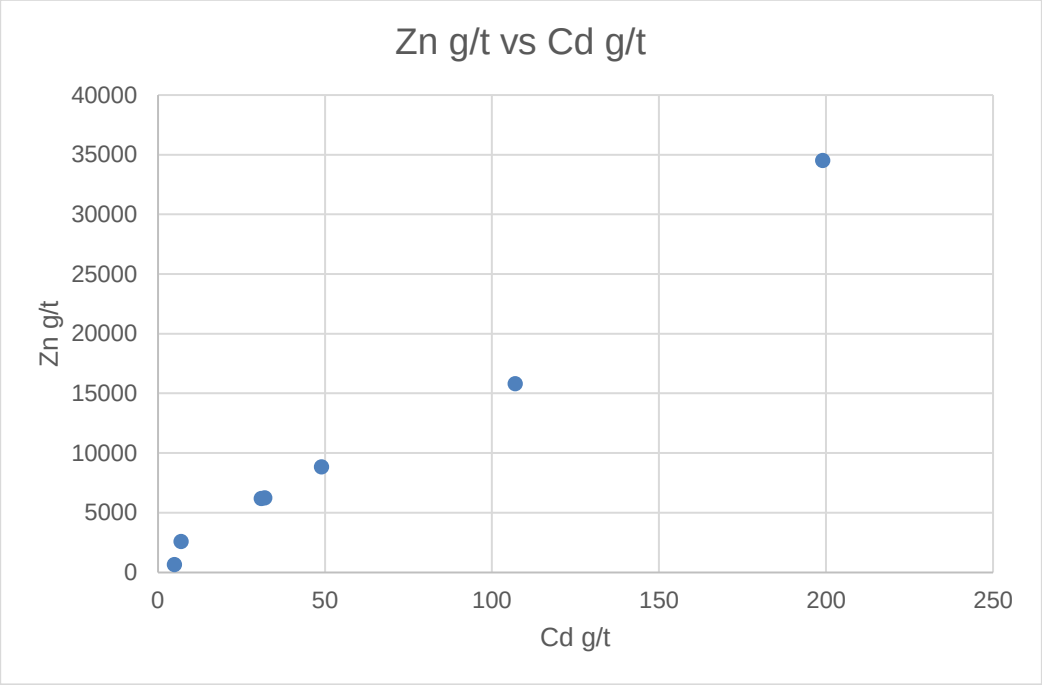

Figure 2: Zinc (Zn) vs. Cadmium (Cd) Concentrations for the Samples with Higher Grades

5. Modal Mineralogy

Table 4 presents the minerals detected within the suite of samples displaying the overall average, minimum, and maximum concentration within the 53 samples, and Table 5 presents the modal mineralogy for each sample.

Summary of the sulphide distribution:

- Pyrite is the main sulphide present within the suite of 53 samples, averages 2.3%, and ranges from 0.02% to 11.5%. Thirty-three of the samples have pyrite concentrations >0.5%.
- Pyrrhotite is the second most abundant sulphide and averages 1.0%, and ranges from nil to 16.8%. Eighteen of the samples have pyrrhotite concentrations >0.5%.
- Sphalerite concentrations are higher in samples DX450052 (1.3%), DX450176 (2.3%), DX450076 (6.7%), DX450119 (0.6%), DX450051 (1.4%), DX450233 (0.46%), and DX450200 (3.6%).
- Chalcopyrite concentrations are higher in samples DX450176 (0.11%), DX450134 (0.41%), DX450119 (0.16%), and DX450200 (1.63%).
- Galena concentrations are higher in samples DX450052 (0.72%), DX450176 (0.22%), DX450076 (0.13%), and DX450051 (1.53%).
- Arsenopyrite concentrations are higher in samples DX 550083 (0.68%), DX450080 (0.11%), DX450071 (1.7%), DX450130 (0.81%), and DX450105 (2.31%).
- Cobaltite/Gersdorffite concentrations are higher in samples DX450134 (1.14%) and DX 550073 (0.11%).
- Molybdenite is not detected in any of the samples in concentrations >0.1%.
- Pentlandite is detected in higher concentrations in sample DX450134 (0.73%)

Summary of the silicate distribution:

- The dominant silicate phases include quartz which averages 29.5%, and ranges from 4.5% to 54.5%, plagioclase (albite/oligoclase) which averages 23.5% and ranges from 1.4% to 54.7%, and sericite/muscovite which averages 12.2% and ranges from 0.17% to 54.2%.
- Other silicate minerals typically in moderate to traces levels include plagioclase (anorthite/bytownite – ave. 0.49%), plagioclase (labradorite – ave. - 2.6%), K-feldspars (ave. 2.5%), biotite (ave. - 7.1%), chlorite (ave - 2.7%), clays (ave - 2.6%), amphibole (ave - 8.4%), and garnet (ave - 0.82%).

- Some of the samples have very high concentrations of amphiboles which include DX 550056 (55.4%), DX450022 (46.4%), DX450077 (42.1%), DX450113 (34.8%), DX 550101 (57.3%), DX450128 (35.9%), DX 550073 (19.8%), DX 550053 (61.4%), and DX 550089 (51.7%).

Summary of the carbonate mineral distribution:

- Calcite is present as a minor to trace mineral in each sample, averaging 1.9% and ranges from nil to 11.0%.
- Dolomite occurs in trace levels in samples DX450108 (0.24%), DX450134 (0.27%), DX 550089 (0.19%), DX450130 (0.19%), and DX450049 (0.21%).
- Ankerite occurs in trace levels in samples DX450108 (0.15%), DX 550089 (0.62%), DX450130 (0.13%), and DX450049 (0.60%).

Table 4: Average, Minimum, and Maximum Values for Each Mineral Detected for all 53 Samples

Mineral	Average %	Min %	Max %

6. Electron Microprobe Analysis (EMPA)

The QEMSCAN modal mineralogy data was reviewed and nearly all the samples underwent EMPA analysis for select phases. The minerals selected for analysis and elements of concern include:

- Pyrite for low concentrations of Co, Ni, Cu, As and Se (n=514)
- Pyrrhotite for Co, Ni, Cu and Se (n=369)
- Sphalerite for Cd, Mn, Cu and Se (n=122)
- Arsenopyrite for Co, Ni, As, Sb and Se (n=68)
- Chalcopyrite for Co, Ni and Se (n=18)
- Galena for Se (n=31)
- Gersdorffite/Cobaltite and loellingite for Co, Ni, Sb and Se (n=24)

Noted in the EMPA data, two-point analysis of loellingite were reported for sample DX450113 with an average arsenic concentration of 71.0%, 5.7% nickel, 3.42% copper and 18.9% iron. The QEMSCAN did not loellingite in any of the samples.

Molybdenite and pentlandite were not analyzed by EMPA.

6.1. EMPA of Pyrite

Table 7 summarizes the EMP data for pyrite presenting the global average, average composition of each sample and the number of EPMA analysis per sample. The cobalt, nickel, and arsenic concentrations are variable within the suite of samples.

Samples that have average concentrations of pyrite with >0.07% cobalt include:

- DX450181, DX450171, DX450185, DX 550056, DX450128, DX450186, DX450185, DX 550056, DX450128, DX450176, DX450134, DX550053, DX450071, DX450049, DX450227, and DX450230.

Samples that have average concentrations of pyrite with >0.1% nickel include:

- DX450204, DX450232, DX450171, DX550056, DX550056, DX550053, DX450130, , DX450137, DX450080, and DX450230.

Samples that have average concentrations of pyrite with >0.1% arsenic include:

- DX450052, DX 550083, DX450159, DX450186, DX450185, DX450076, DX450051, DX450071, DX450130, DX450039, DX450105, and DX450118.

The samples with the higher concentrations mentioned above are highlighted in yellow in Table 7.

Table 7: Summary of the EMPA Analysis for Pyrite for the Global Population and Each Sample

6.2. EMPA of Pyrrhotite

Table 8 summarizes the EMP data for pyrrhotite. The cobalt and copper concentrations are typically below or near to the detection limits (0.03%). Nickel concentrations vary within the suite of samples.

Samples that have average concentrations of pyrrhotite with >0.1% nickel include:

- DX450185, DX450008, DX450077, DX450113, DX 550101, DX450134, DX 550064, DX 550053, DX450130, DX450089, DX 550073, and DX450080.

The samples with the higher concentrations mentioned above are highlighted in yellow in Table 8.

Table 8: Summary of the EMPA Analysis for the Pyrrhotite for the Global Population and Each Sample

6.3. EMPA of Sphalerite

Table 9 summarizes the EMP analyses for sphalerite presenting the global average, average composition of each sample and the number of EPMA analysis per sample. For each sample, cadmium is consistently detected, and the global average is 0.34% but ranges from 0.16% in sample DX450119 to 0.58% in sample DX450021. Copper concentrations are generally below the detection limits, but sample DX450119 reports and average of 0.46%. There is one analysis that appears to be over reporting the copper and is assumed to be mixed with a chalcopyrite grain.

Table 9: Summary of the EMPA Analysis for the Sphalerite for the Global Population and Each Sample

		Zn	Cd	Fe	Mn	Cu	S	Se	Total	Num. of Analysis

6.4. EMPA of Arsenopyrite

Table 10 summarizes the EMP analyses for arsenopyrite presenting the global average, average composition of each sample and the number of EPMA analysis per sample.

Arsenic concentrations average 43.94% and range from 42.26% in sample DX 550083 up to 47.15% in sample DX450113.

For most of the samples, cobalt, nickel, and antimony concentrations are close or below the detection limits. Three samples have higher concentrations of cobalt which include DX450113 (0.55%), DX450143 (0.35%), and DX450080 (2.29%). Three samples have higher concentrations of nickel which include DX450113 (0.22%), DX450039 (0.32%), and DX450080 (0.36%). The samples with the higher concentrations mentioned are highlighted in yellow in Table 10.

Table 10: Summary of the EMPA Analysis for the Arsenopyrite for the Global Population and Each Sample

6.5. EMPA of Sulfarsenides - Gersdorffite and Cobaltite

Gersdorffite was detected only in sample DX450134 and 15 EMP analyses were complete. Cobalt, nickel, arsenic and antimony concentrations average 2.41%, 21.87%, 46.66% and 0.1%, respectively.

Seven cobaltite grains were analyzed due to scarcity of the mineral in the samples (6 analyses from sample DX 550073 and 1 analysis from DX450080). Between both samples, the arsenic concentrations are similar at 45.89% and 46.50%, respectively. However, there is a substantial difference between the cobalt and nickel concentrations, where sample DX 550073 averages 20.45% and 8.48%, respectively and sample DX450080 averages 11.95% and 14.02%, respectively. The average values of the EMPA are summarized in Table 11.

Table 11: Summary of the EMPA Analysis for the Sulfarsenides - Gersdorffite and Cobaltite for the Global Population and Each Sample

		Fe	Co	Ni	As	Sb	S	Se	Total	Num. of Analysis	Mineral ID
Detection Limits (%)		**0.05**	**0.03**	**0.03**	**0.10**	**0.05**	**0.03**	**0.26**		**22**	
DX450134	Average	10.30	2.41	21.87	46.66	0.10	18.32	0.03	99.68	15	Gersdorffite

6.6. EMPA of Chalcopyrite

Table 12 summarizes the results from the EMPA for chalcopyrite from 18 analyses. Fifteen chalcopyrite grains were analyzed from DX450200, one from each of sample DX450076, DX 550101, and DX450119. Cobalt and arsenic concentrations are below the detection limits.

Table 12: Summary of the EMPA Analysis for the Chalcopyrite for the Global Population

		Fe	Co	Ni	Cu	S	Se	Total	Num. of Analysis
Detection Limits (%)		**0.05**	**0.03**	**0.03**	**0.11**	**0.03**	**0.03**	**0.03**	
Global	Average	30.38	0.01	0.01	34.64	34.99	0.01	100.03	18

6.7. EMPA of Galena

Table 13 summarizes the results from the EMPA for galena including the global average, and average composition of each sample, and the number of EPM analyses. A total of 31 analyses were completed, 10 for sample DX450052, and 3 for each DX450176 and DX450051.

Table 13: Summary of the EMPA Analysis for the Galena for the Global Population

		Pb	S	Se	Total	Num. of Analysis
Detection Limits (%)		**0.17**	**0.02**	**0.03**		
Global	**Average**	**86.62**	**13.31**	**0.05**	**99.98**	**31**
DX450052	Average	86.41	13.23	0.03	99.68	10
DX450176	Average	86.43	13.22	0.17	99.82	6
DX450051	Average	86.84	13.39	0.01	100.23	15

7. Elemental Deportment

The elemental deportment is calculated based on the mineral mass of each phase within each respective sample, the average composition of each phase from the EMP data, and/or theoretical composition (mainly for the silicates). The deportment data is presented in Appendix A for sulphur (S), arsenic (As), cadmium (Cd), cobalt (Co), copper (Cu), molybdenum (Mo), lead (Pb), arsenic (Ni), and zinc (Zn).

In summary:

- Cadmium is hosted only by sphalerite.
- Copper is primarily hosted by chalcopyrite.
- Molybdenite was the only host for molybdenum.
- Sphalerite was the only mineral host for zinc.
- Galena was the only mineral host for lead.

There is more diversity on the mineral hosts and elemental deportment for each sulphur, nickel, cobalt, and arsenic.

8. Sulphur Deportment

Table 14 presents the average, minimum, and maximum values for the suite of 53 samples and illustrates that pyrite and pyrrhotite are the dominate sulphur-bearing minerals for most of the samples. Figure 3 though Figure 6 present the elemental deportment of sulphur for each sample.

Pyrite accounts for an average of 63.85% of the total S and ranges from 21.0% to 99.8%. The following samples have >50% of the sulphur hosted by pyrite:

- DX450052 (71.7%), DX450204 (94.7%), DX450176 (65.2%), DX450232 (98.2%), DX450181 (63.5%), DX450002 (88.7), DX450108 (69.5%), DX450076 (68.6%), DX450118 (52.7%), DX 550107 (99.6%), DX450159 (98.7%), DX450171 (65.7%), DX450008 (78.6%), DX450077 (55.5%), DX450021 (72.4%), DX450222 (99.3%), DX450153 (98.9%), DX450017 (79.6%), DX450144 (77.4%), DX 550073 (61.6%), DX 550089 (71.7%), DX450051 (76.9%), DX450239 (99.8%), DX450130 (59.4%), DX450039 (97.8%) DX450137 (88.4%), DX450155 (86.9%), DX450030 (83.1%), DX450105 (61.5%), DX450170 (98.8%), DX450227 (88.8%), DX450230 (92.0%), and DX450135 (46.8%).

Pyrrhotite accounts for an average of 26.2% of the total S, and ranges from nil to 73.4%. The following samples have >30% of the sulphur hosted by pyrrhotite:

- DX 550083 (37.7%), DX450186 (57.5%), DX450118 (43.9%), DX450171 (33.3%), DX450134 (41.8%), DX450185 (61.0%), DX450032 (53.1%), DX 550064 (50.3%), DX 550056 (51.3%), DX450022 (45.9%), DX450077 (35.7%), DX450113 (73.4%), DX 550101 (52.0%), DX450128 (54.5%), DX450119 (66.4%), DX450080 (62.3%), DX450143 (64.9%), DX 550053 (64.0%), DX450089 (63.6%), DX450233 (51.4%), and DX450049 (46.5%).

Sphalerite accounts for an average of 3.69% of total S, and ranges from nil to 42.03%. The following samples have >10% of the sulphur hosted by sphalerite:

- DX450052 (11.2%), DX450176 (25.4%), DX450076 (29.2%), DX450051 (14.1%), DX450200 (37.1%), and DX450135 (42.0%).

Arsenopyrite accounts for an average of 2.38% of total S, and ranges from nil to 34.93%. The following samples have >10% of the sulphur hosted by arsenopyrite:

- DX 550083 (13.0%), DX450071 (28.7%), DX450130 (34.9%), and DX450105 (30.3%)

Chalcopyrite accounts for an average of 2.65% of total S, and ranges from nil to 26.0%. The following samples have >10% of the sulphur hosted by chalcopyrite:

- DX450181 (26.05%), DX 550101 (24.3%), DX 550053 (10.3%) and DX450200 (17.5%)

Table 14: Average, Minimum, and Maximum Values for Sulphur Deportment for all 53 Samples

Mineral	Average	Min	Max
Pyrite	63.85	21.00	99.81
Pyrrhotite	26.16	0.00	73.39
Sphalerite	3.69	0.00	42.03
Chalcopyrite	2.65	0.00	26.05
Galena	0.27	0.00	6.05
Arsenopyrite	2.38	0.00	34.93
Cobaltite/Gersdorffite	0.35	0.00	12.15
Molybdenite	0.00	0.00	0.05
Pentlandite	0.14	0.00	3.92
Other Sulphides	0.07	0.00	3.35
Sulphates	0.36	0.02	3.33

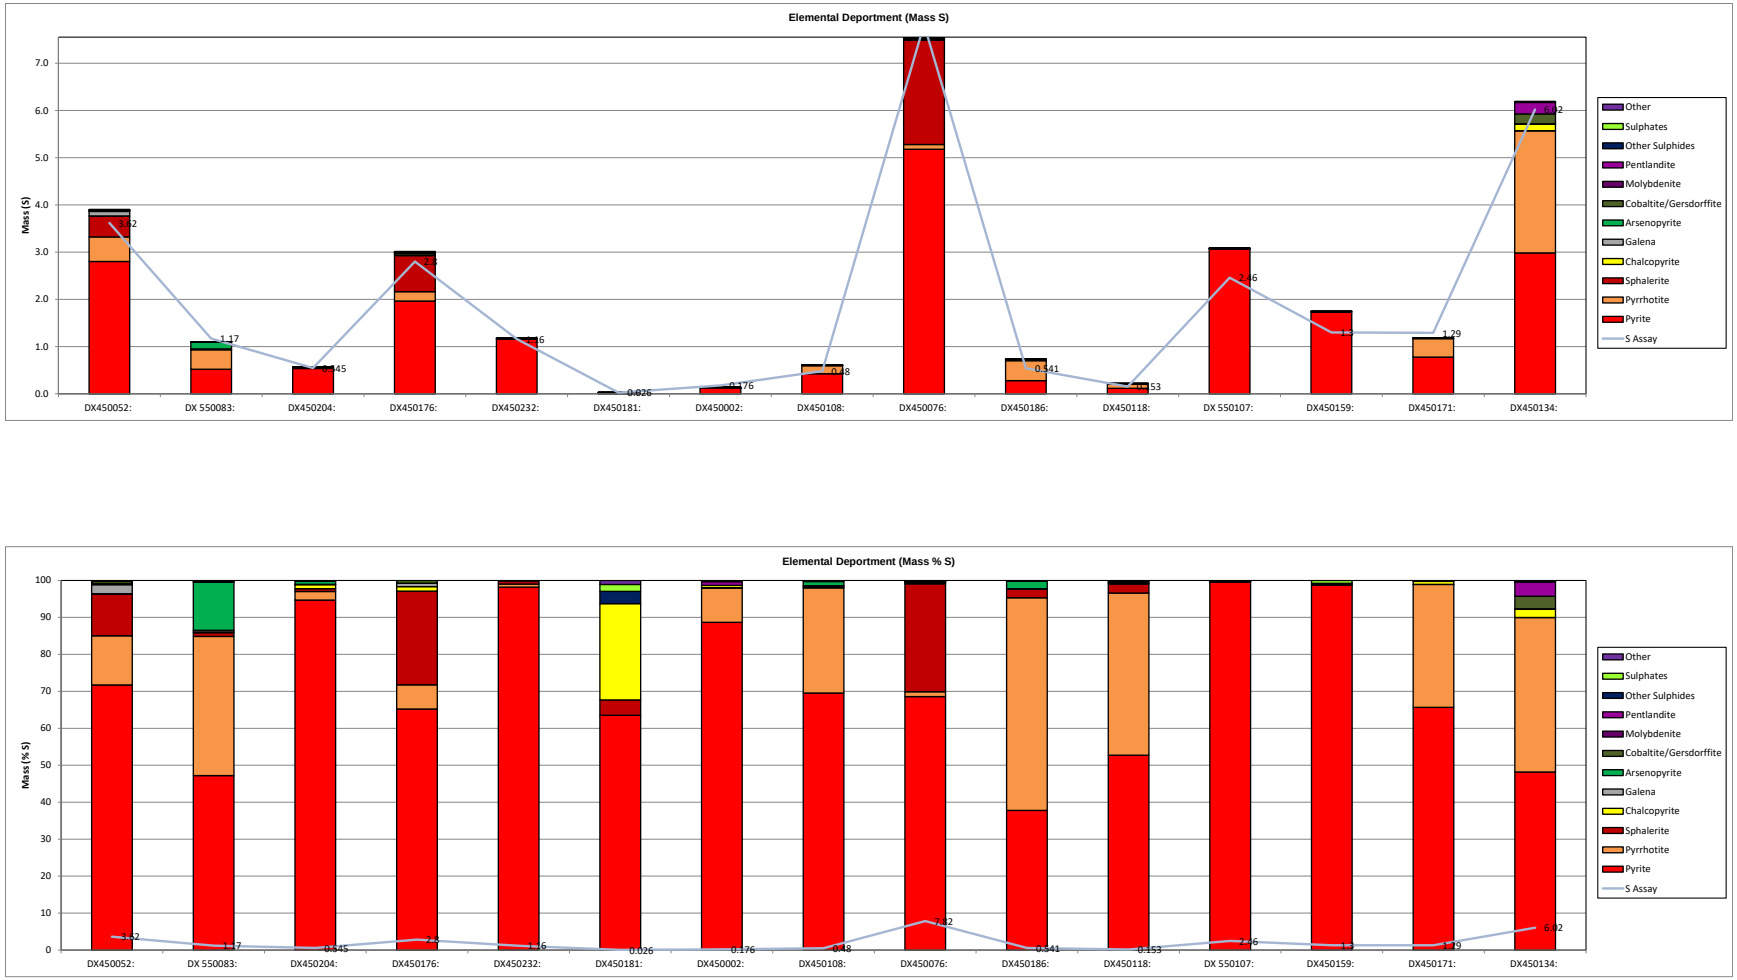

Figure 3: Elemental Deportment of Sulphur for Samples DX450052 through DX450134 by Mass % and Normalized Mass % with the Sulphur Assay

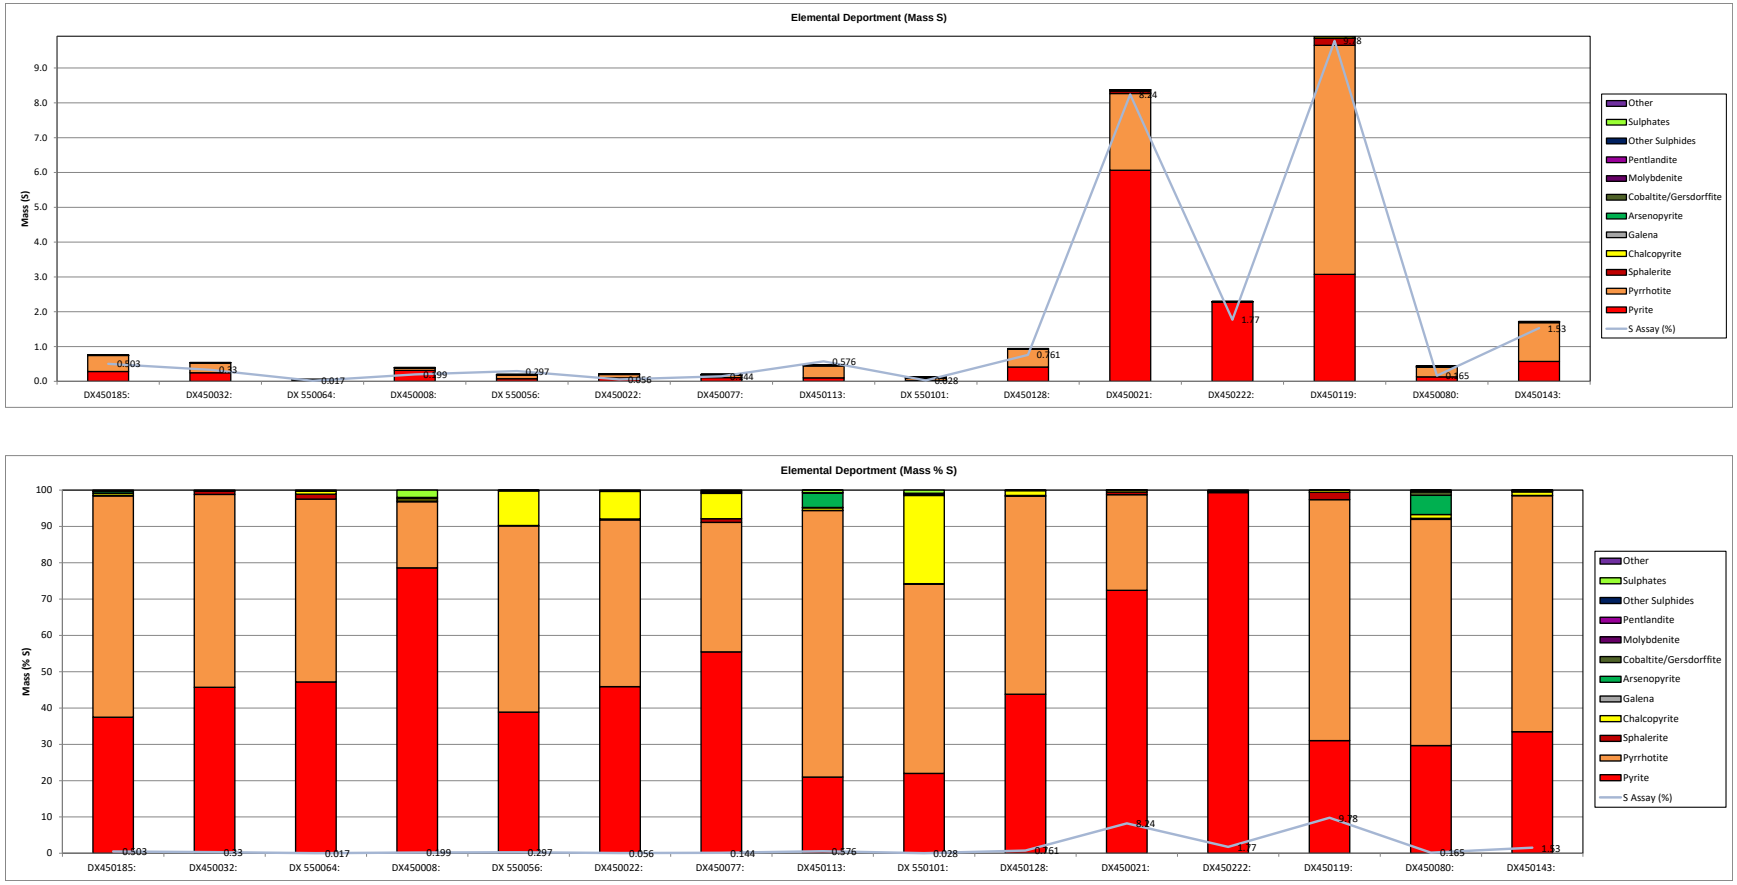

Figure 4: Elemental Deportment of Sulphur for Samples DX450185 through DX450143 by Mass and Normalized Mass % with the Sulphur Assay (%)

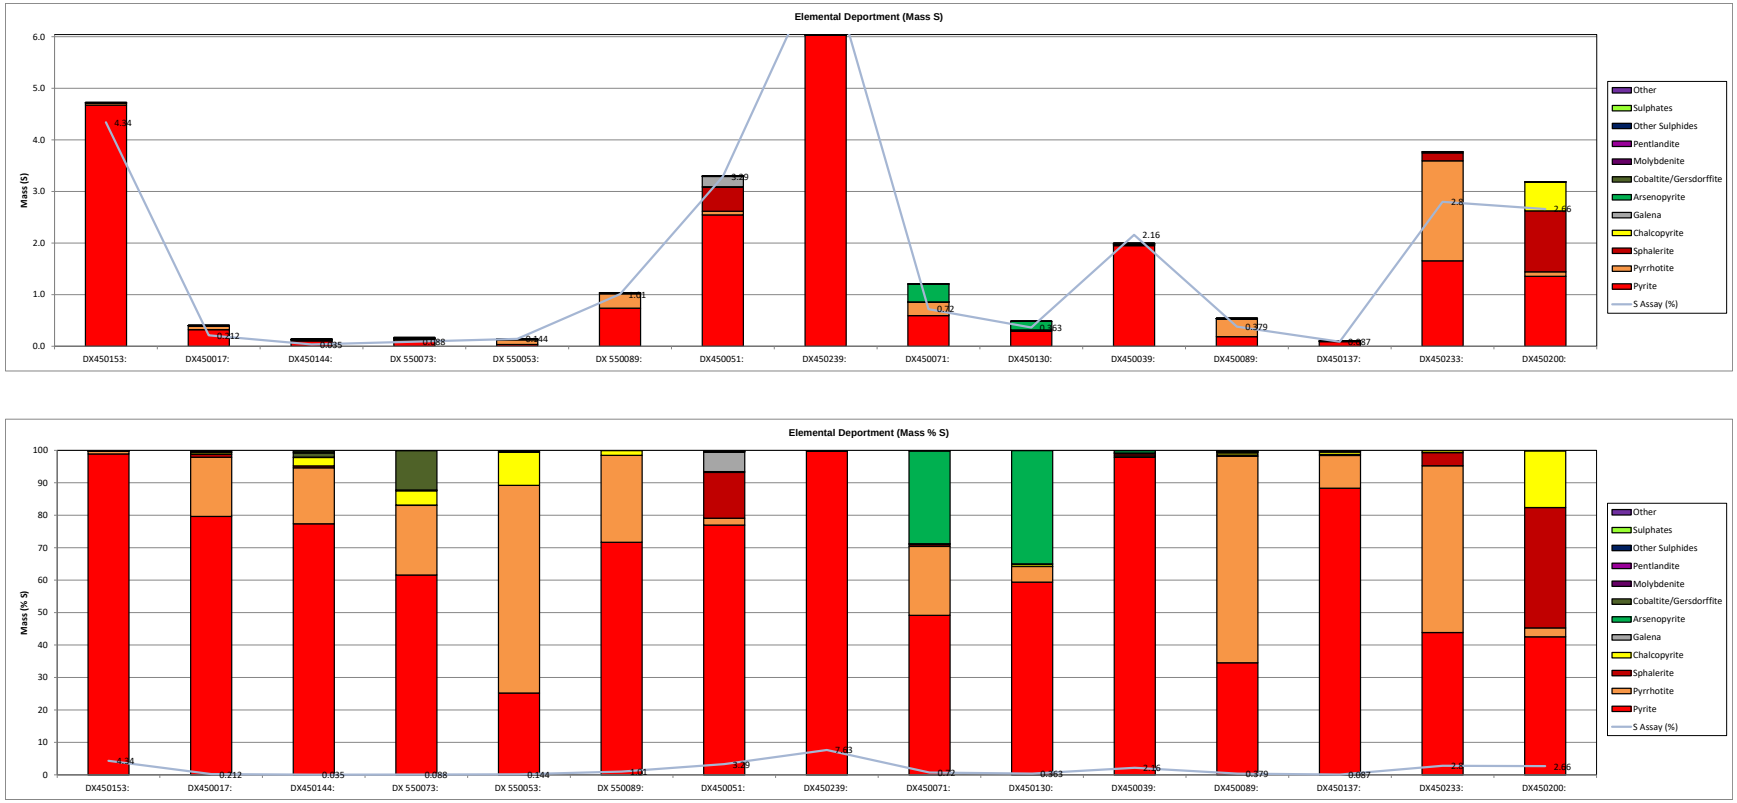

Figure 5: Elemental Deportment of Sulphur for Samples DX450153 through DX450200 by Mass and Normalized Mass % with the Sulphur Assay (%)

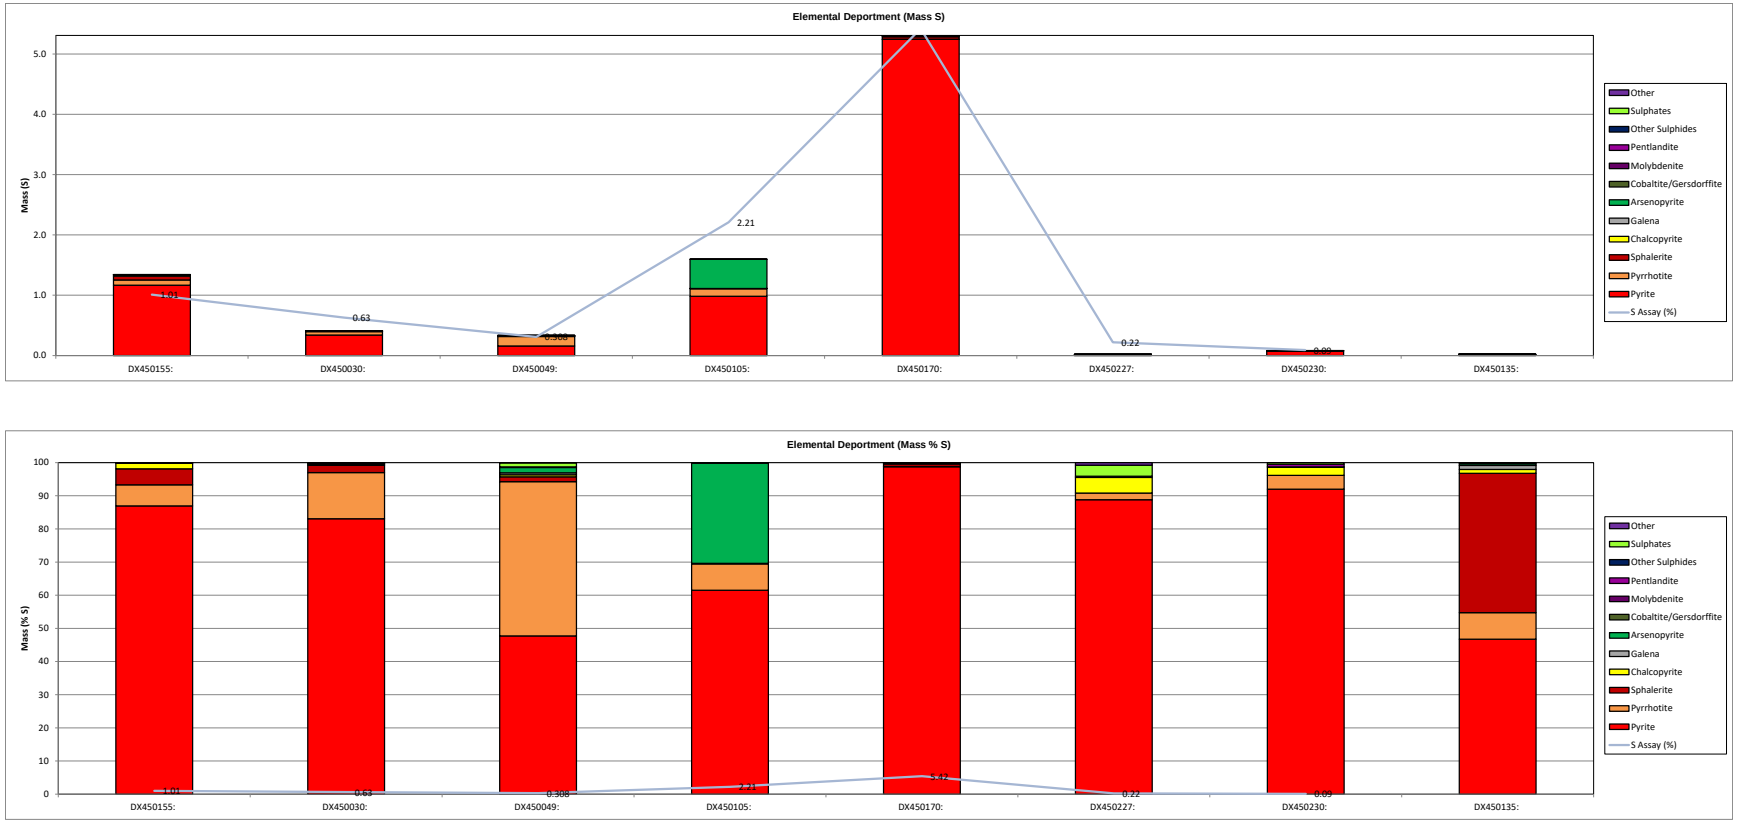

Figure 6: Elemental Deportment of Sulphur for Samples DX450155 through DX450135 by Mass and Normalized Mass % with the Sulphur Assay (%)

9. Nickel Deportment

Table 15 presents the average, minimum and maximum values for the suite of 53 samples. Figure 7 though Figure 10 present the elemental deportment of nickel for each sample. A precautionary note is that most of these samples are very low grade as per the assay presented in Table 3, where many are below the detection limit. With the exception of sample DX450134, which grades at 4830 g/t Ni, all of the samples that are above the detection limit are below 150 g/t Ni.

From the EMPA data, the following averages were used for pyrite:

- 0.18% Ni for samples DX450204, DX450232, DX450171, DX 550056, DX 550053, DX450130, DX450137, DX450080, and DX450230.
- 0.07% Ni for all the other samples.

From the EMPA data, the following averages were used for pyrrhotite:

- 0.22% Ni for samples DX450185, DX450008, DX450077, DX450113, DX 550101, DX450134, DX 550064, DX 550053, DX450130, DX450089, DX 550073 and DX450080
- 0.05% Ni for all the other samples.

Pyrite accounts for an average of 54.87% of the total nickel and ranges from 0.8% to 100%, and pyrrhotite averages 23.7% of the total nickel and ranges from nil to 87.5%.

- Samples that have >10% of the nickel hosted by arsenopyrite include DX 550083 (14.5%), DX450071 (26.1%), DX450130 (16.8%), and DX450105 (32.4%).
- Samples that have >10% of the nickel hosted by pentlandite include DX450052 (40.3%), DX450204 (19.9%), DX450002 (88.7%), DX450108 (40.3%), DX450134 (51.2%), DX450185 (22.5%), DX 550056 (43.4%), DX450077 (39.4%), DX 550101 (42.7%), DX450128 (34.3%), DX450080 (19.6%), DX450144 (25.8%), DX450039 (10.8%), DX450089 (26.1%), and DX450230 (72.3).
- Samples that have >10% of the nickel hosted by cobaltite/gersdorffite include DX450052 (40.3%), DX450204 (19.8%), DX450002 (88.7%), DX450134 (51.2%), DX450185 (22.5%), DX 550101 (42.7%), DX450128 (34.3%), DX450080 (19.6%), DX450144 (25.8%), DX450039 (10.8%), DX450089 (26.1%), and DX450230 (72.3%)

Table 15: Average, Minimum, and Maximum Values for Nickel Deportment for all 53 Samples

Mineral	Average	Min	Max
Pyrite	54.87	0.80	100.00
Pyrrhotite	23.73	0.00	87.50
Arsenopyrite	2.18	0.00	32.36
Cobaltite/Gersdorffite	6.83	0.00	96.58
Pentlandite	12.39	0.00	88.73

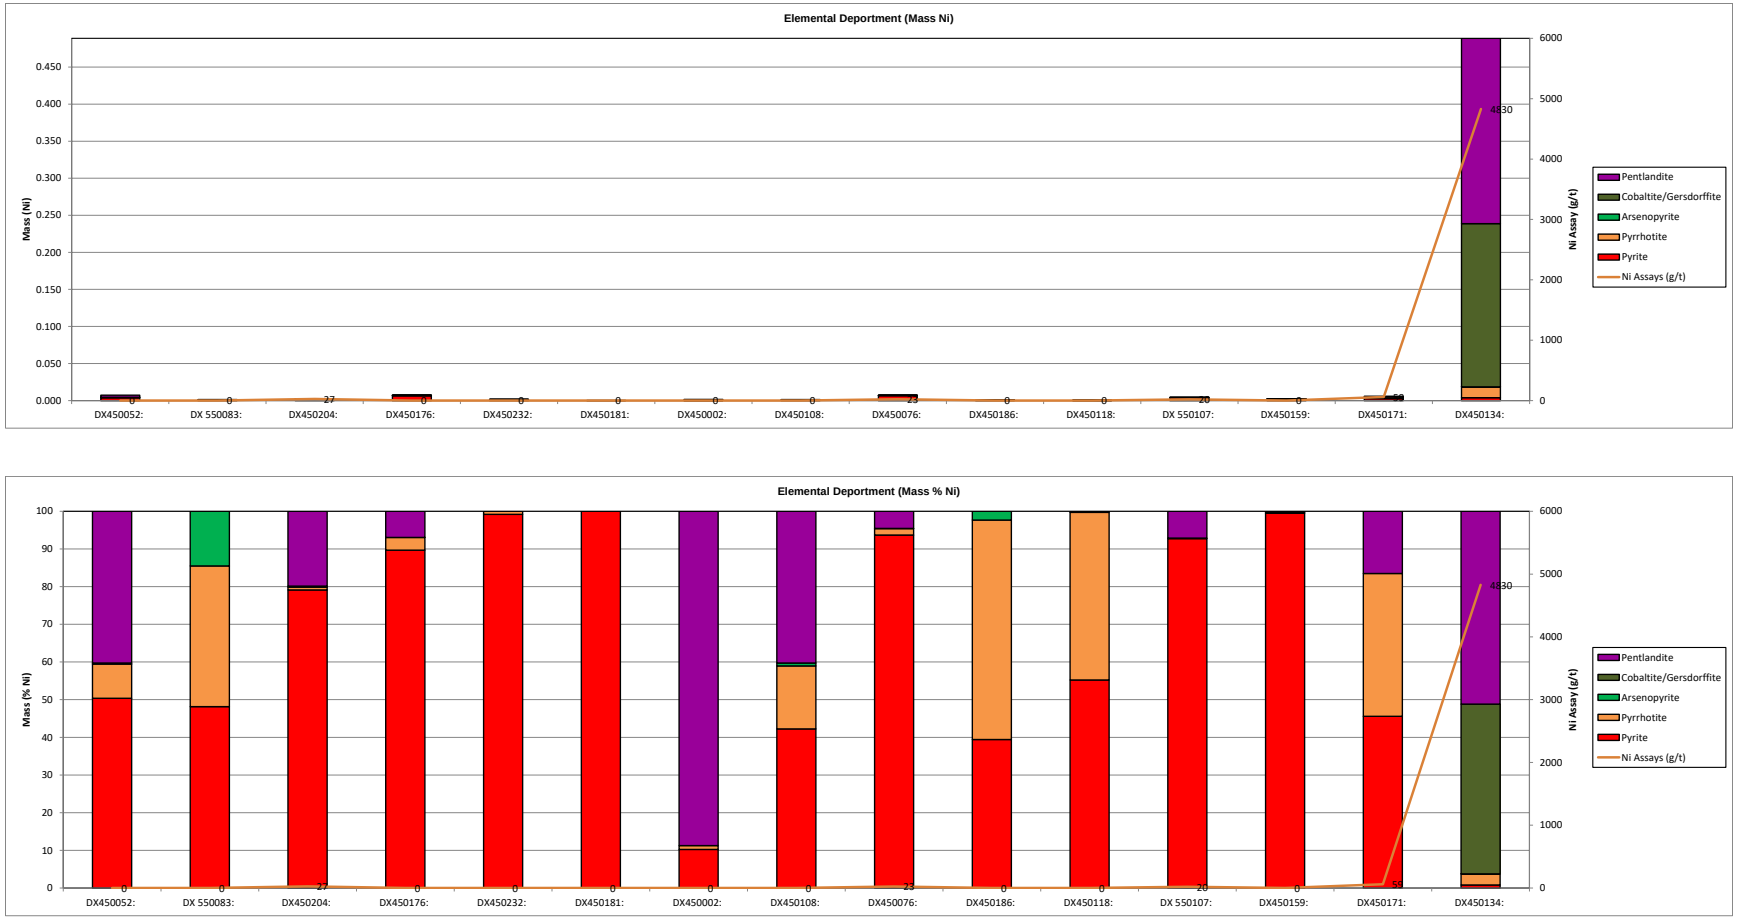

Figure 7: Elemental Deportment of Nickel for Samples DX450052 through DX450134 by Mass and Normalized Mass % with the Ni Assays (g/t)

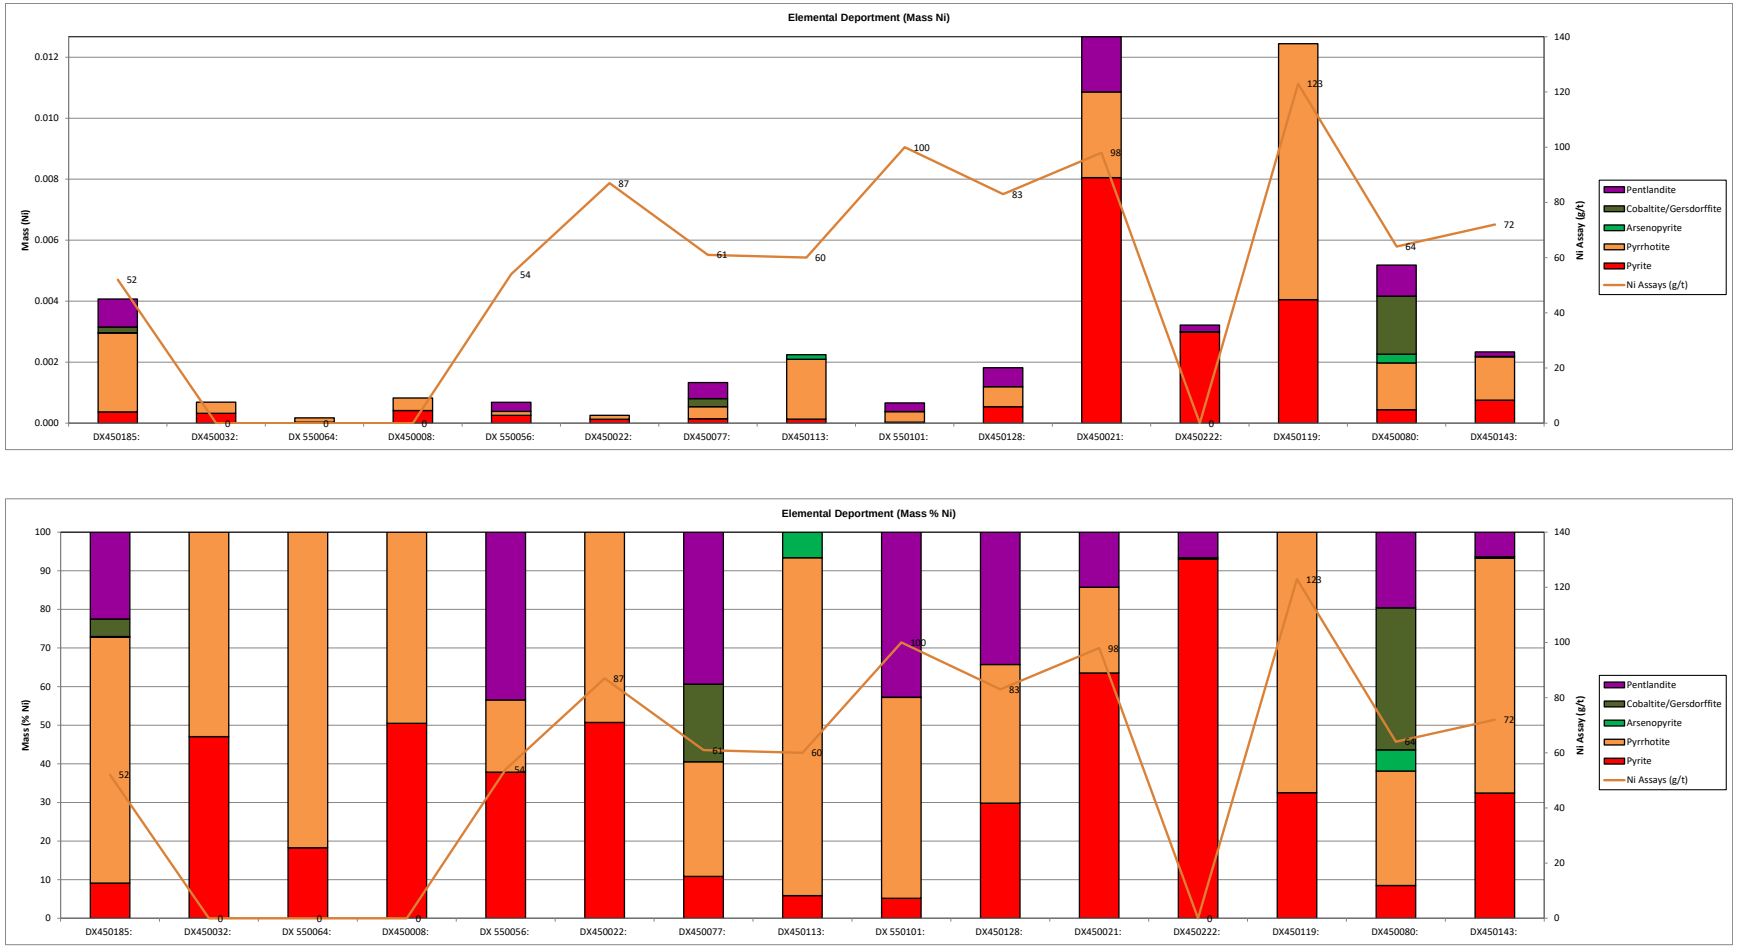

Figure 8: Elemental Deportment of Nickel for Samples DX450185 through DX450143 by Mass and Normalized Mass % with the Ni Assays (g/t)

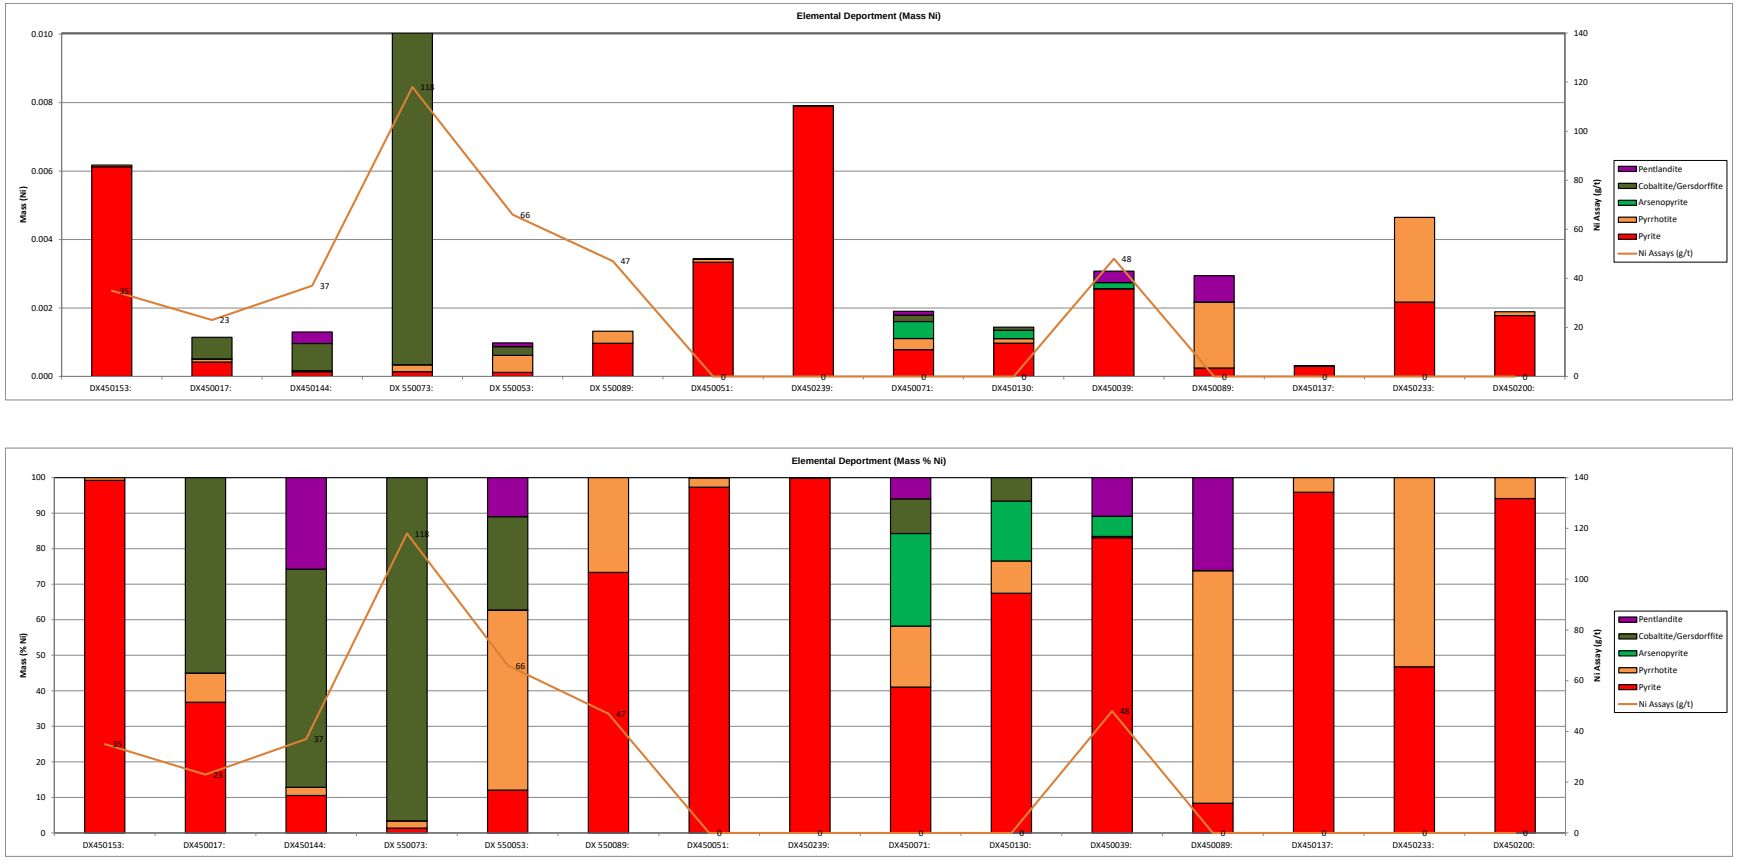

Figure 9: Elemental Deportment of Nickel for Samples DX450153 through DX450200 by Mass and Normalized Mass % with the Ni Assays (g/t)

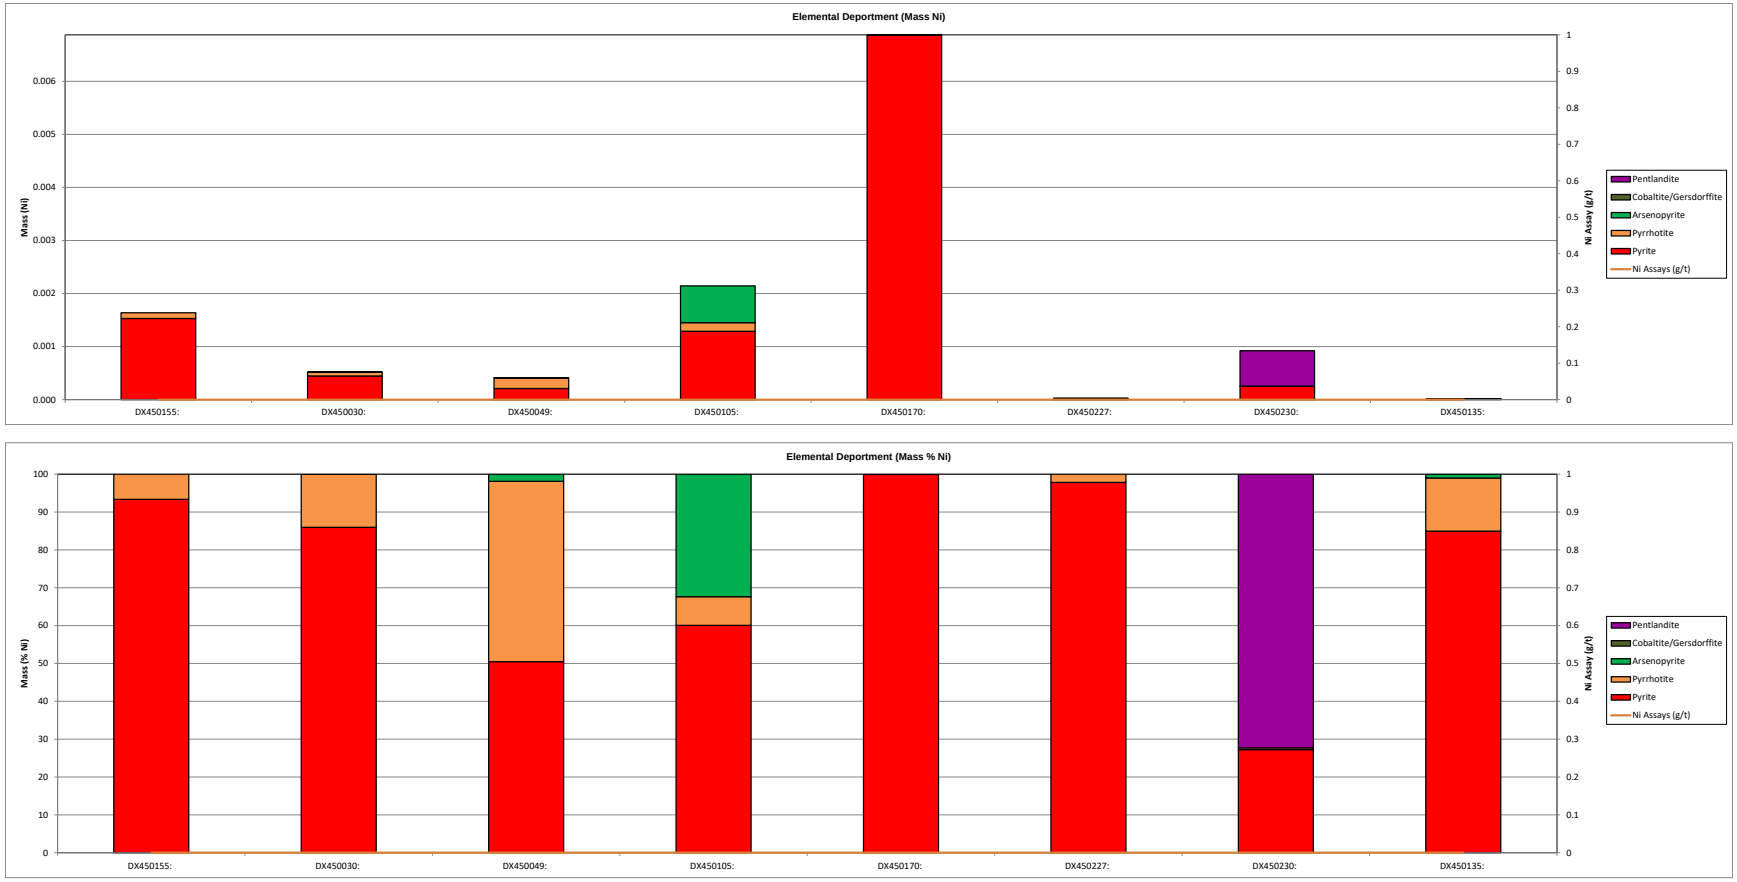

Figure 10: Elemental Deportment of Nickel for Samples DX450155 through DX450135 by Mass and Normalized Mass % with the Ni Assays (g/t)

10. Arsenic Deportment

Table 16 presents the average, minimum, and maximum values for the suite of 53 samples. Figure 11 though Figure 14 present the elemental deportment of arsenic for each sample. A precautionary note is that most of these sample are very low grade as per the assay presented in Table 3, where many are below the detection limit.

- From the EMPA data, the following arsenic averages were used for pyrite:
    - 0.19% arsenic for DX450052, DX 550083, DX450159, DX450186, DX450185, DX450076, DX450051, DX450071, DX450130, DX450039, DX450105, and DX450118
    - 0.02% arsenic for all other samples

Pyrite accounts for an average of 53.32% of total arsenic, and ranges from 0.08% to 100% of the total arsenic in the samples.

- Samples that have above 0.1% arsenic from the bulk sample assays include:
    - DX 550083 (0.16%) DX450071 (0.61%), DX450130 (0.28%), and DX450105 (0.79%), and the main mineral host is arsenopyrite.
    - DX450134 at 0.45% arsenic where the main mineral host is cobaltite/gersdorffite.

Table 16: Average, Minimum, and Maximum Values for Arsenic Deportment for all 53 Samples

Mineral	Average	Min	Max
Pyrite	53.32	0.08	100.00
Arsenopyrite	35.68	0.00	99.91
Cobaltite/Gersdorffite	11.01	0.00	99.26

Figure 11: Elemental Deportment of Arsenic for Samples DX450052 through DX450134 by Mass and Normalized Mass % with the As Assays (g/t)

Figure 12: Elemental Deportment of Arsenic for Samples DX450185 through DX450143 by Mass and Normalized Mass % with the As Assays (g/t)

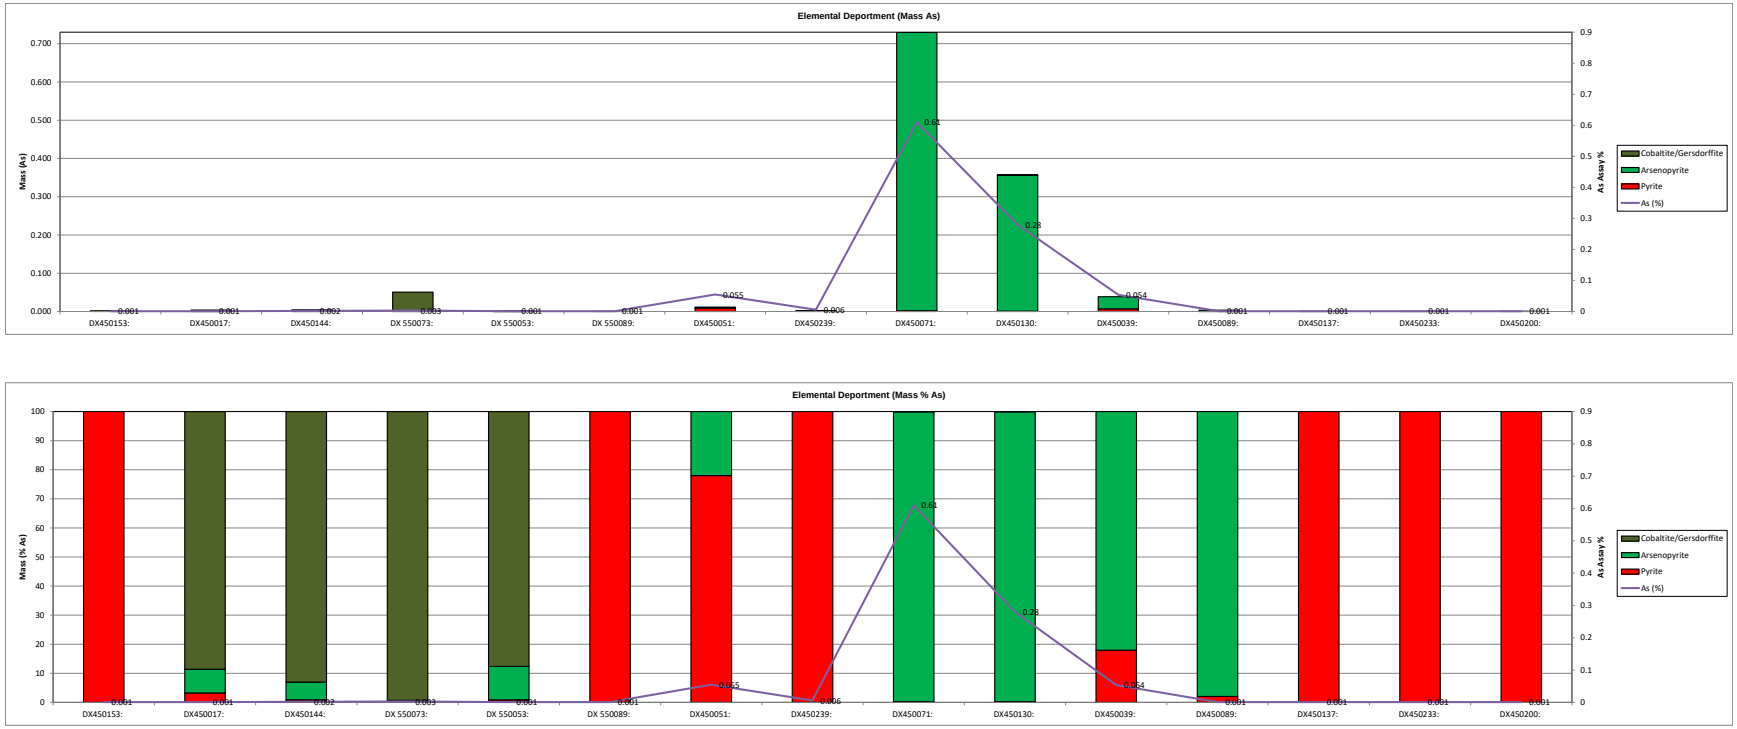

Figure 13: Elemental Deportment of Arsenic for Samples DX450153 through DX450200 by Mass and Normalized Mass % with the As Assays (g/t)

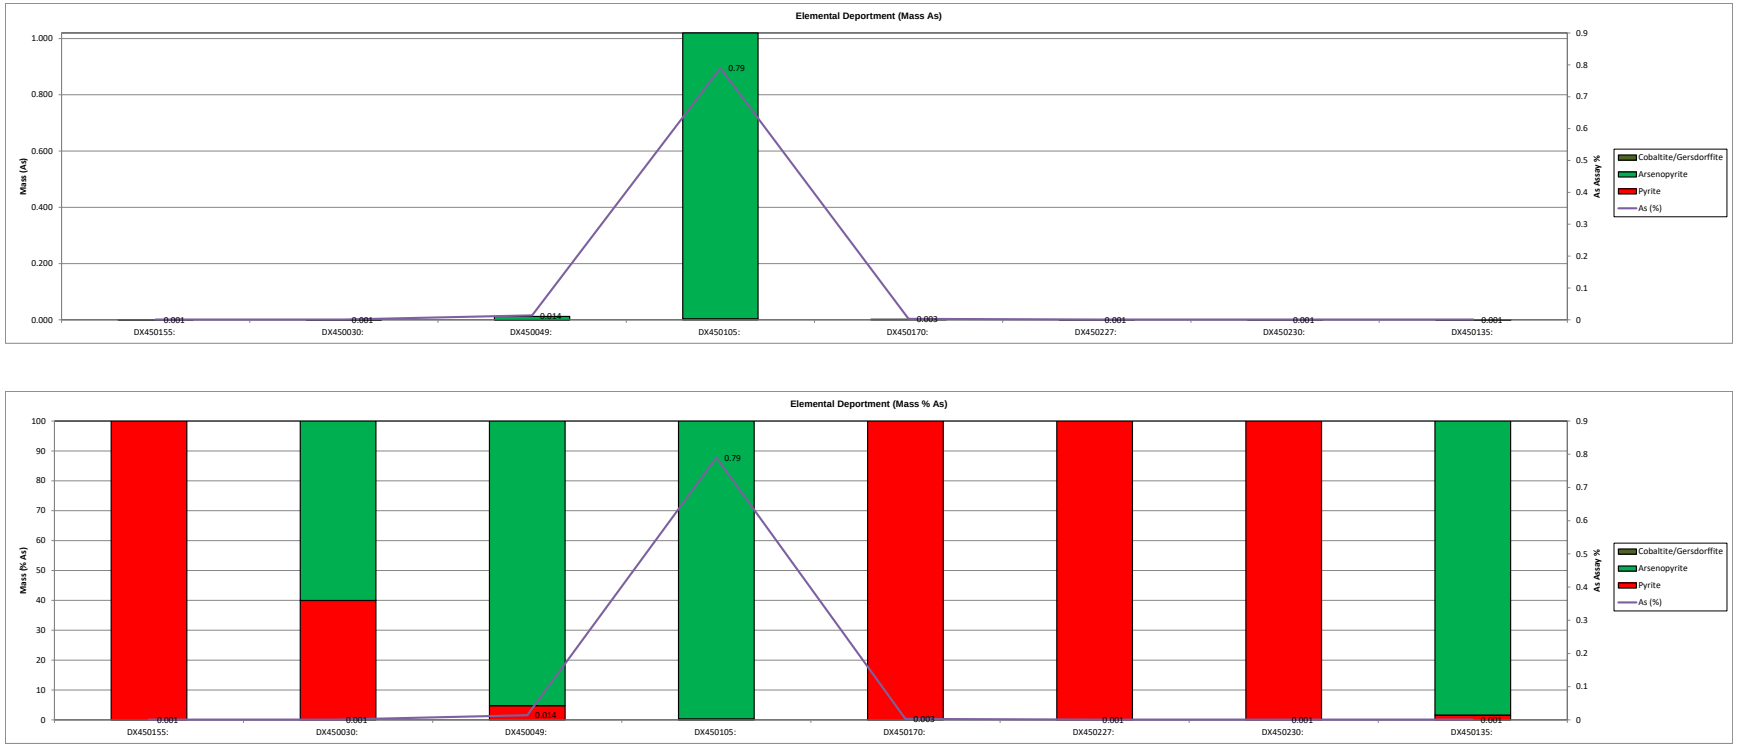

Figure 14: Elemental Deportment of Arsenic for Samples DX450155 through DX450135 by Mass and Normalized Mass % with the As Assay

11. Cobalt Deportment

Table 17 presents the average, minimum, and maximum values for the suite of 53 samples. Figure 15 though Figure 18 present the elemental deportment of cobalt for each sample. A precautionary note is that most of these samples are very low grade as per the bulk sample assays presented in Table 3.

- From the EMPA data, the following cobalt averages were used for pyrite:
    - 0.19% Co applied for samples DX450181, DX450171, DX450185, DX550056, DX450128, DX450186, DX 550056, DX450128, DX450176, DX450134, DX550053, DX450071, DX450049, DX450227, and DX450230.
    - 0.03% for all other samples.
- From the EMPA data, the following cobalt averages were used for arsenopyrite:
    - 0.86% Co for samples DX450113, DX450143 and DX450080.
    - 0.03% for all other samples.

Cobaltite/gersdorffite is the main mineral host of cobalt in the DX450134 sample which yields 267 g/t cobalt.

Table 17: Average, Minimum, and Maximum Values for Cobalt Deportment for all 53 Samples

Mineral	Average	Min	Max
Pyrite	53.32	0.08	100.00
Arsenopyrite	35.68	0.00	99.91
Cobaltite/Gersdorffite	11.01	0.00	99.26

High Definition Mineralogical Analysis using QEMSCAN (Quantitative Evaluation of Materials by Scanning Electron Microscopy)

EMPA Applied Concentration for Ni, As and Co for Pyrite, Pyrrhotite and Arsenopyrite for the Various Samples

Mineral	From EMPA	% Ni Applied											
Pyrite	Ave Ni >0.1%	0.18	DX450204	DX450232	DX450171	DX 550056	DX 550056	DX 550053	DX450130	DX450130	DX450137	DX450080	DX450230
	Ave Ni <0.1%	0.07	All other samples										
Pyrrhotite	Ave Ni >0.1%	0.22	DX450204	DX450232	DX450171	DX 550056	DX 550056	DX 550053	DX450130	DX450137	DX450080	DX450230	
	Ave Ni <0.1%	0.05	All other samples										

Mineral	From EMPA	% As Applied												
Pyrite	Ave As >0.1%	0.19	DX450052	DX 550083	DX450159	DX450186	DX450185	DX450076	DX450051	DX450071	DX450130	DX450039	DX450130	DX450105	DX450118
	Ave As <0.1%	0.02	All other Samples												

Mineral	From EMPA	% Co Applied																	
Pyrite	Ave Co >0.7%	0.19	DX450181	DX450171	DX450185	DX 550056	DX450128	DX450186	DX450185	DX 550056	DX450128	DX450176	DX450134	DX 550053	DX450071	DX450049	DX450227	DX450230
	Ave Co <0.7%	0.03	All other Samples															
Arsenopyrite	Ave Co >0.2%	0.86	DX450113	DX450143	DX450080													
	Ave Co <0.2%	0.03	All other Samples

MI5020-AUG22

High Definition Mineralogical Analysis using QEMSCAN (Quantitative Evaluation of Materials by Scanning Electron Microscopy)

EMPA - Pyrite

Accelerating potential = 15 kV, beam current = 20 nA; focused beam.
Standards and matrix corrections are listed above.
Precision is given in columns T-Z and detection limit in columns AJ-AP.

High Definition Mineralogical Analysis using QEMSCAN (Quantitative Evaluation of Materials by Scanning Electron Microscopy)

EMPA - Pyrite

Accelerating potential = 15 kV, beam current = 20 nA; focused beam.
Standards and matrix corrections are listed above.
Precision is given in columns T-Z and detection limit in columns AJ-AP.

MI5020-AUG22

High Definition Mineralogical Analysis using QEMSCAN (Quantitative Evaluation of Materials by Scanning Electron Microscopy)

EMPA - Pyrite

Accelerating potential = 15 kV, beam current = 20 nA; focused beam.
Standards and matrix corrections are listed above.
Precision is given in columns T-Z and detection limit in columns AJ-AP.

Results_of_analyses:

High Definition Mineralogical Analysis using QEMSCAN (Quantitative Evaluation of Materials by Scanning Electron Microscopy)

EMPA - Pyrite

Accelerating potential = 15 kV, beam current = 20 nA; focused beam.
Standards and matrix corrections are listed above.
Precision is given in columns T-Z and detection limit in columns AJ-AP.

High Definition Mineralogical Analysis using QEMSCAN (Quantitative Evaluation of Materials by Scanning Electron Microscopy)

EMPA - Pyrite

Accelerating potential = 15 kV, beam current = 20 nA; focused beam.
Standards and matrix corrections are listed above.
Precision is given in columns T-Z and detection limit in columns AJ-AP.

High Definition Mineralogical Analysis using QEMSCAN (Quantitative Evaluation of Materials by Scanning Electron Microscopy)

EMPA - Pyrrhotite

Accelerating potential = 15 kV, beam current = 20 nA; focused beam.
Standards and matrix corrections are listed above.
Precision is given in columns R-W and detection limit in columns AF-AK.

High Definition Mineralogical Analysis using QEMSCAN (Quantitative Evaluation of Materials by

EMPA - Arsenopyrite

Accelerating potential = 15 kV, beam current = 20 nA; focused beam.
Standards and matrix corrections are listed above.
Precision is given in columns T-Z and detection limit in columns AJ-AP.

High Definition Mineralogical Analysis using QEMSCAN (Quantitative

EMPA - Arsenopyrite

Accelerating potential = 15 kV, beam current = 20 nA; focused beam.
Standards and matrix corrections are listed above.
Precision is given in columns T-Z and detection limit in columns AJ-AP.

Results_of_analyses:
