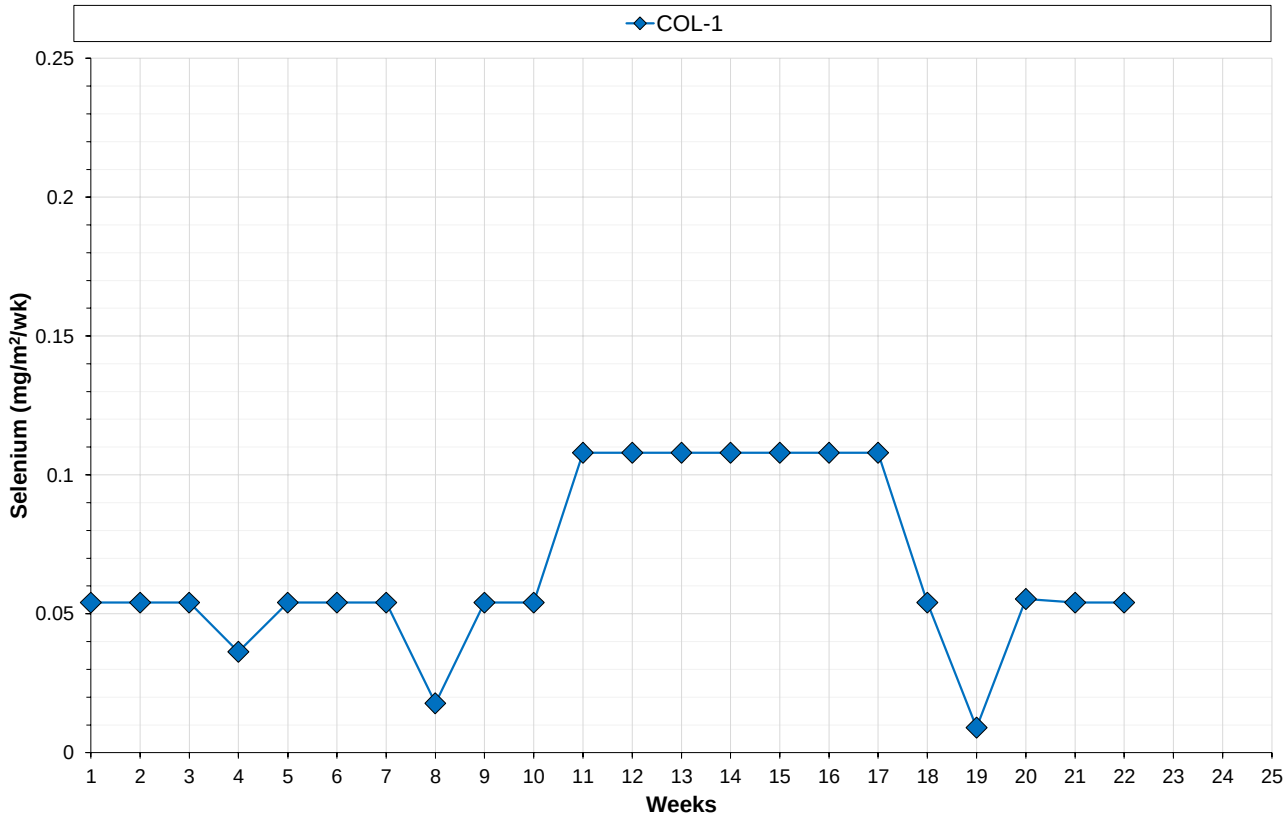
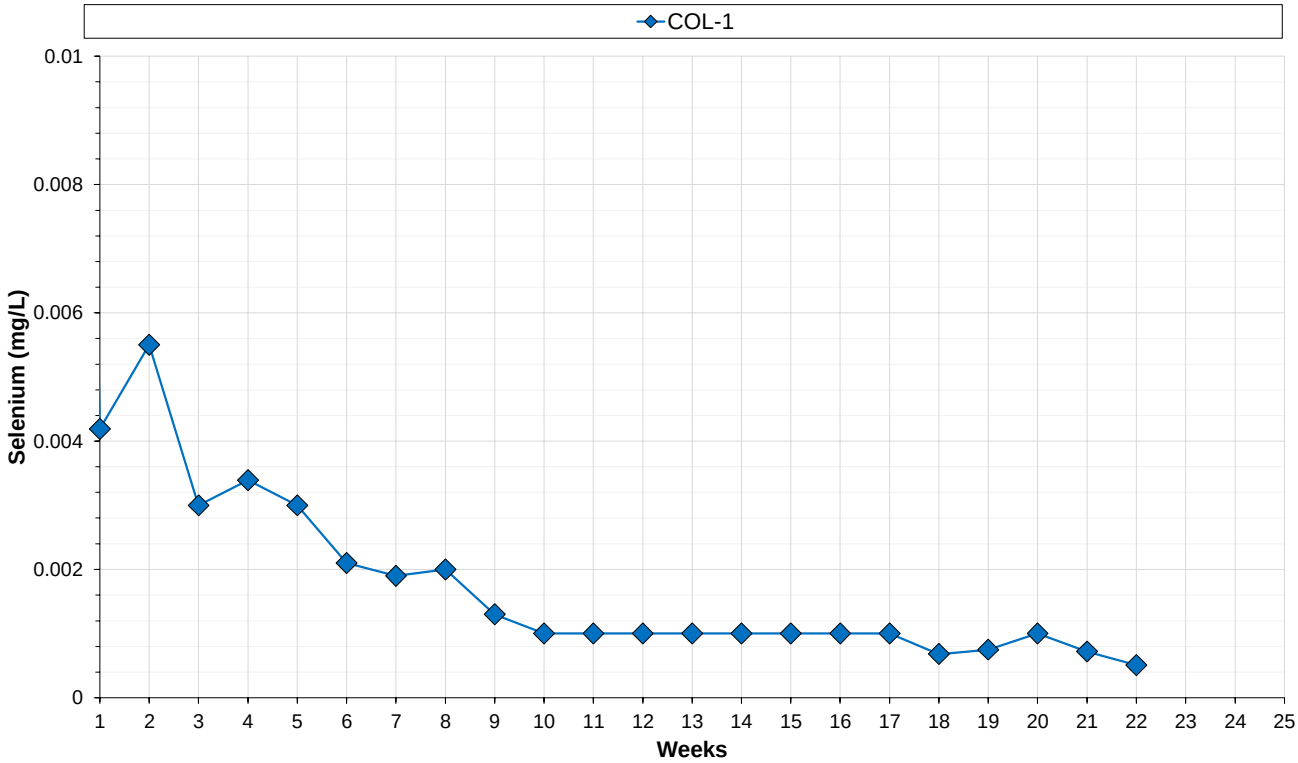
Nickel (Ni)

Concentrate Tailings - Subaqueous Recirculating Column

Great Bear Project

Figure Number		I-31	
Project Number		OMEMA2303	
Date		November 2025	
Drawn	SM	Reviewed	JB





Note:
Release rates shown are based on the change in load release week to week throughout column operation.

Due to a tubing malfunction in Week 9, approximately 1000 mL was lost from the column; 1000 mL was added to maintain an overlying water column of 21 cm throughout the remainder of testing.

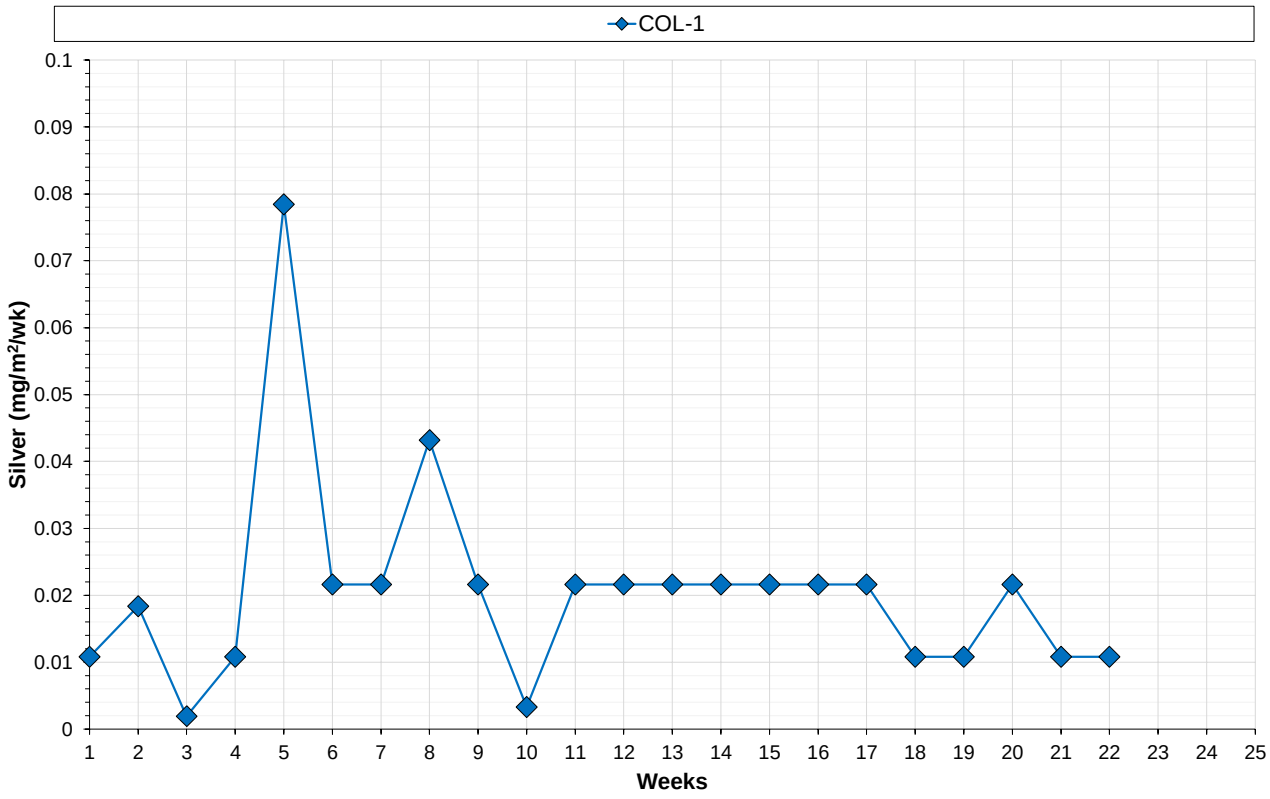
KINROSS

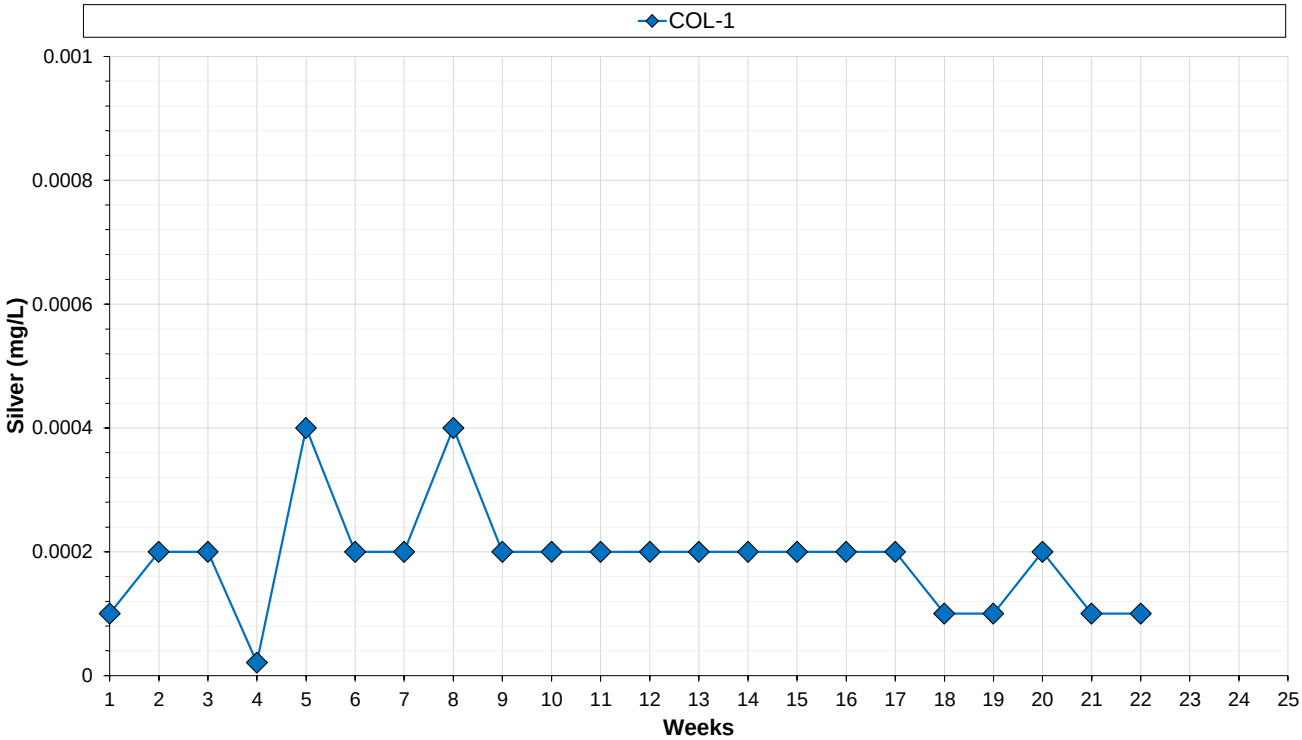
Selenium (Se)

Concentrate Tailings - Subaqueous Recirculating Column

Great Bear Project

Figure Number		I-32	
Project Number		OMEMA2303	
Date		November 2025	
Drawn	SM	Reviewed	JB





Note:
Release rates shown are based on the change in load release week to week throughout column operation.

Due to a tubing malfunction in Week 9, approximately 1000 mL was lost from the column; 1000 mL was added to maintain an overlying water column of 21 cm throughout the remainder of testing.

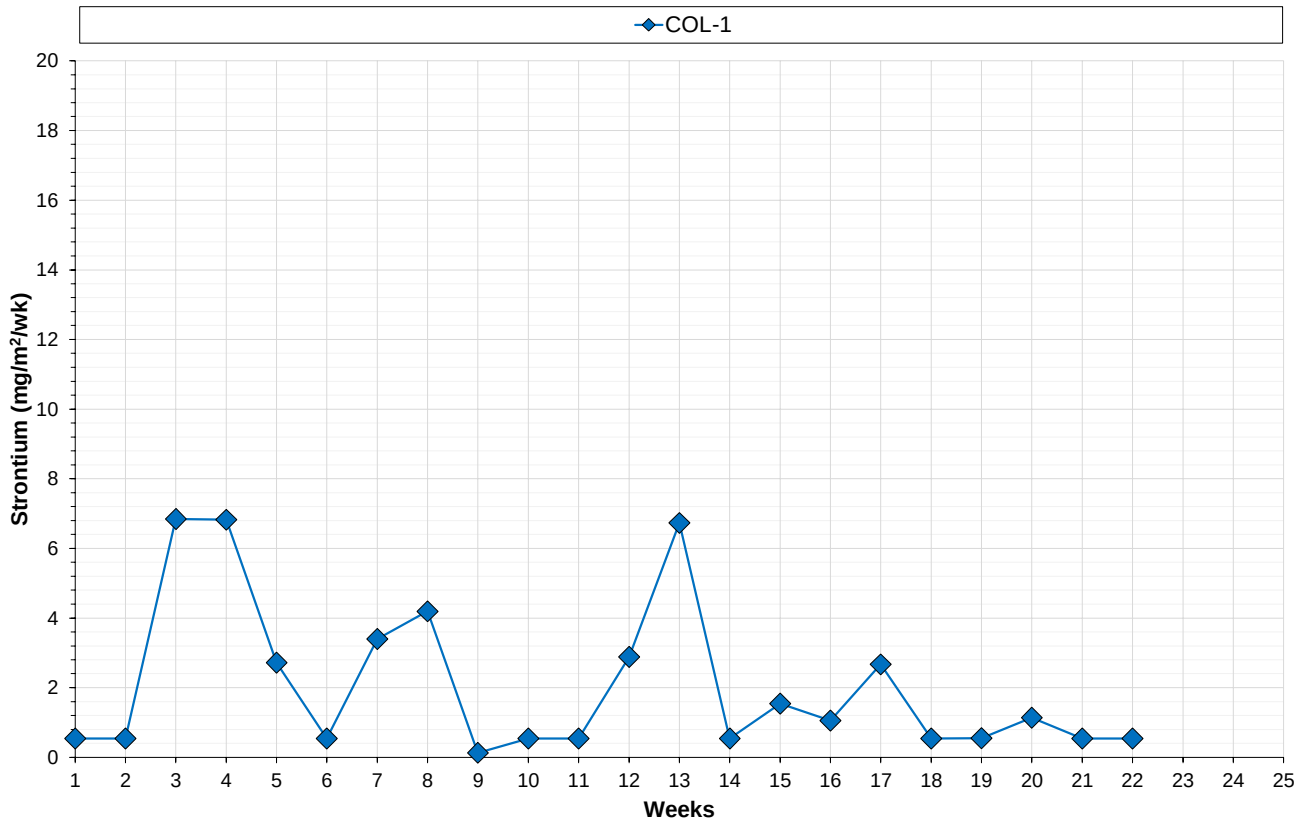
KINROSS

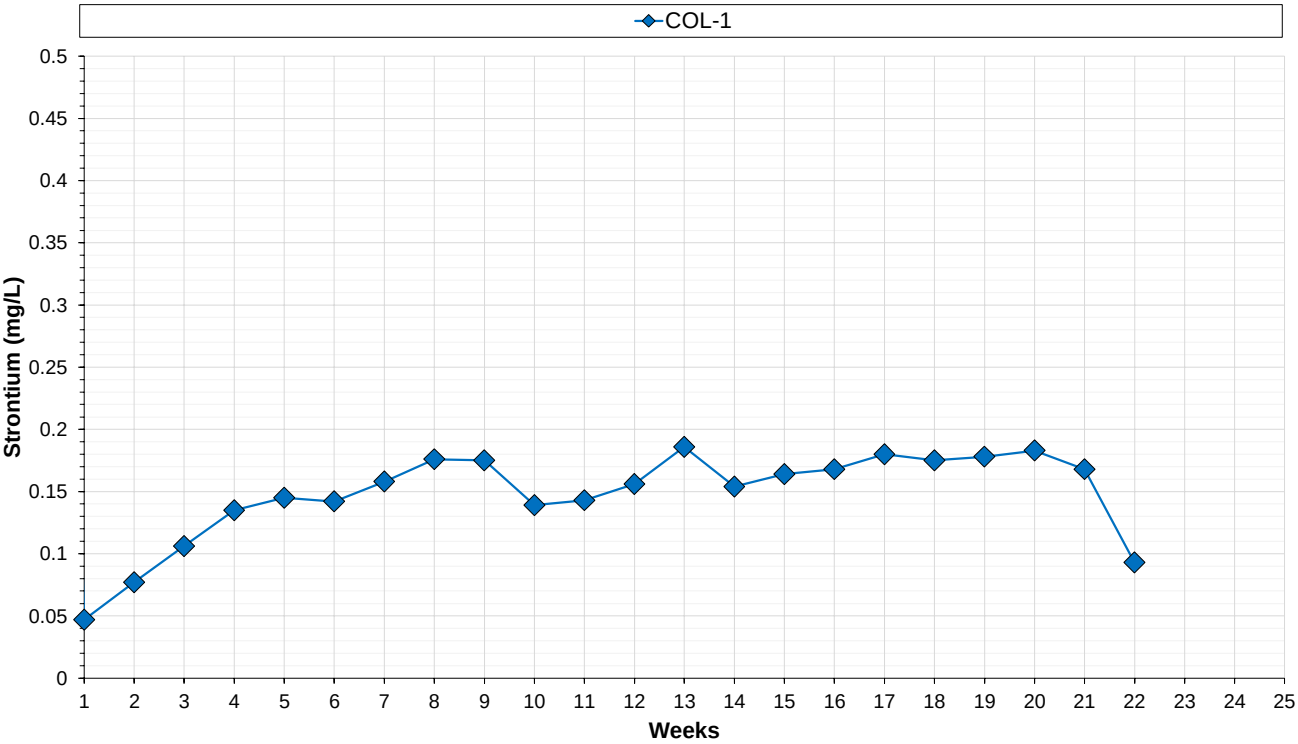
Silver (Ag)

Concentrate Tailings - Subaqueous Recirculating Column

Great Bear Project

Figure Number		I-33	
Project Number		OMEMA2303	
Date		November 2025	
Drawn	SM	Reviewed	JB





Note:
Release rates shown are based on the change in load release week to week throughout column operation.

Due to a tubing malfunction in Week 9, approximately 1000 mL was lost from the column; 1000 mL was added to maintain an overlying water column of 21 cm throughout the remainder of testing.

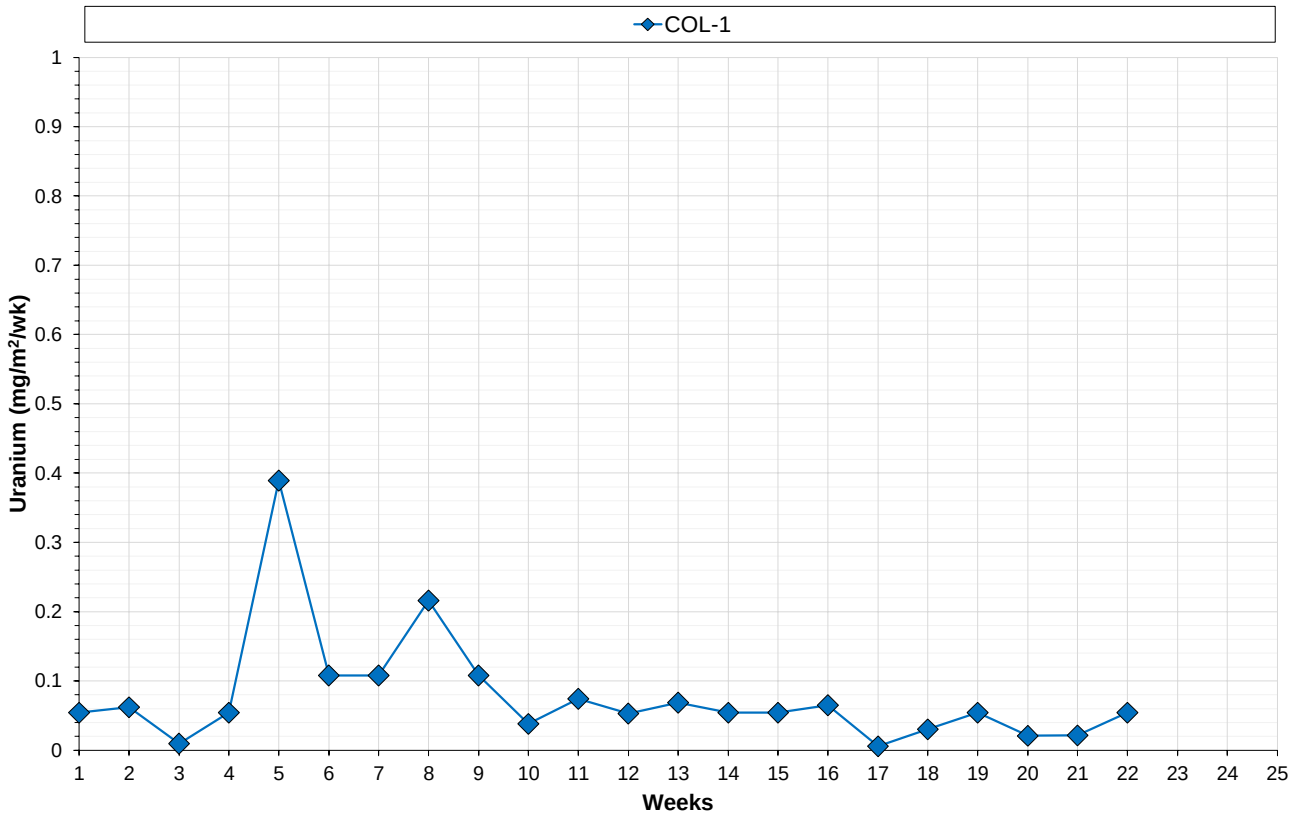
KINROSS

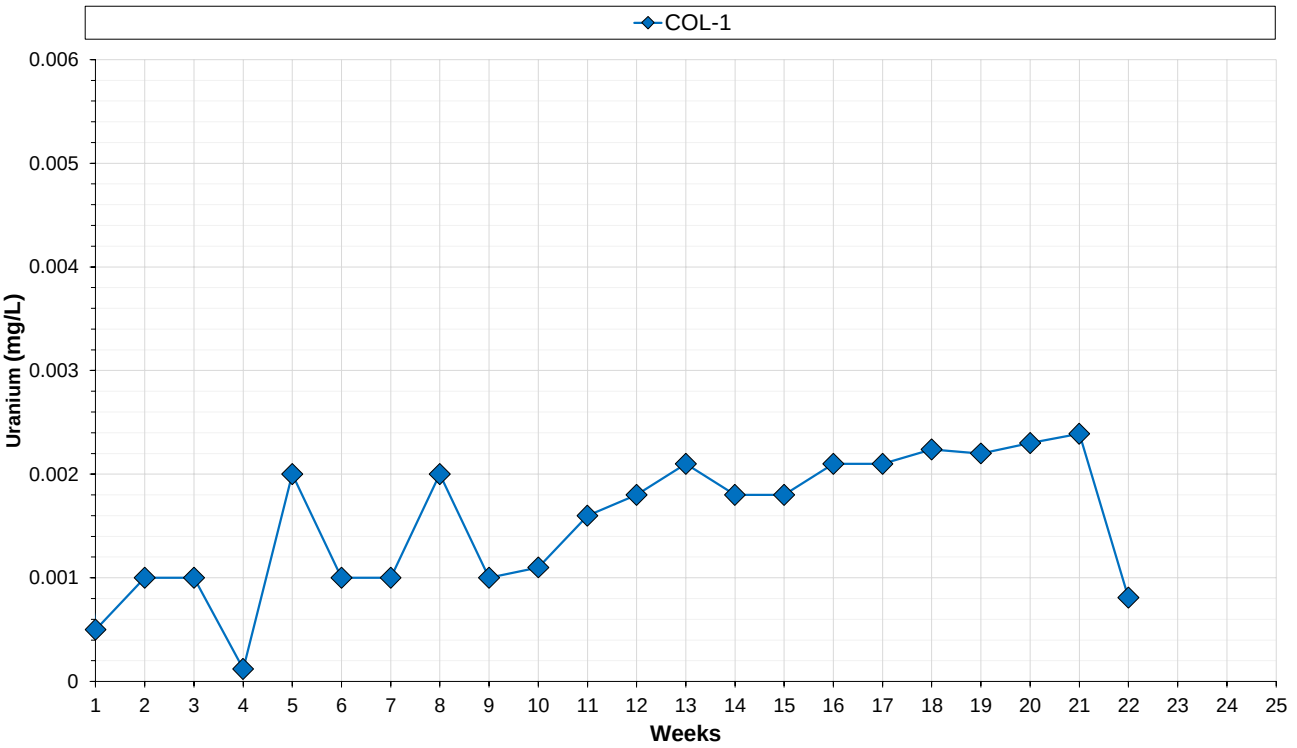
Strontium (Sr)

Concentrate Tailings - Subaqueous Recirculating Column

Great Bear Project

Figure Number		I-34	
Project Number		OMEMA2303	
Date		November 2025	
Drawn	SM	Reviewed	JB





Note:
Release rates shown are based on the change in load release week to week throughout column operation.

Due to a tubing malfunction in Week 9, approximately 1000 mL was lost from the column; 1000 mL was added to maintain an overlying water column of 21 cm throughout the remainder of testing.

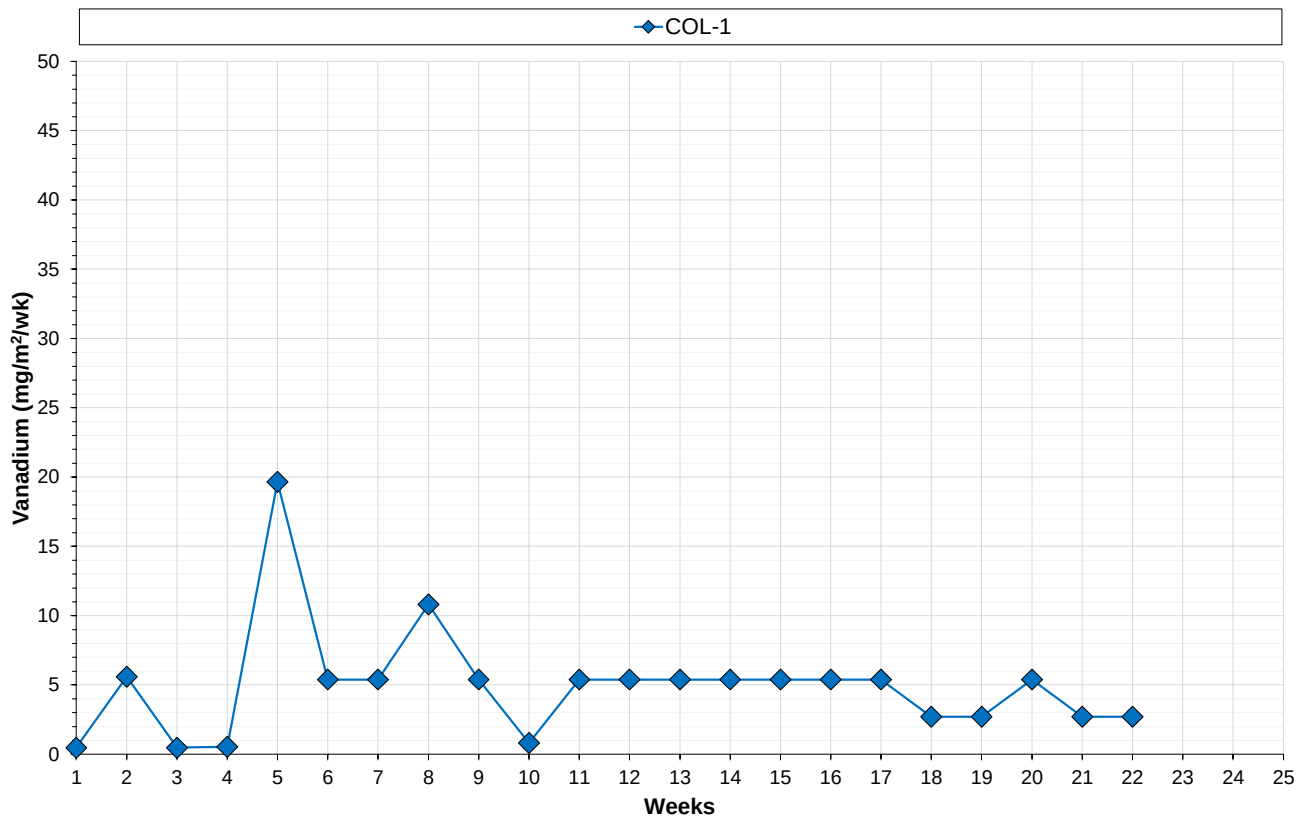
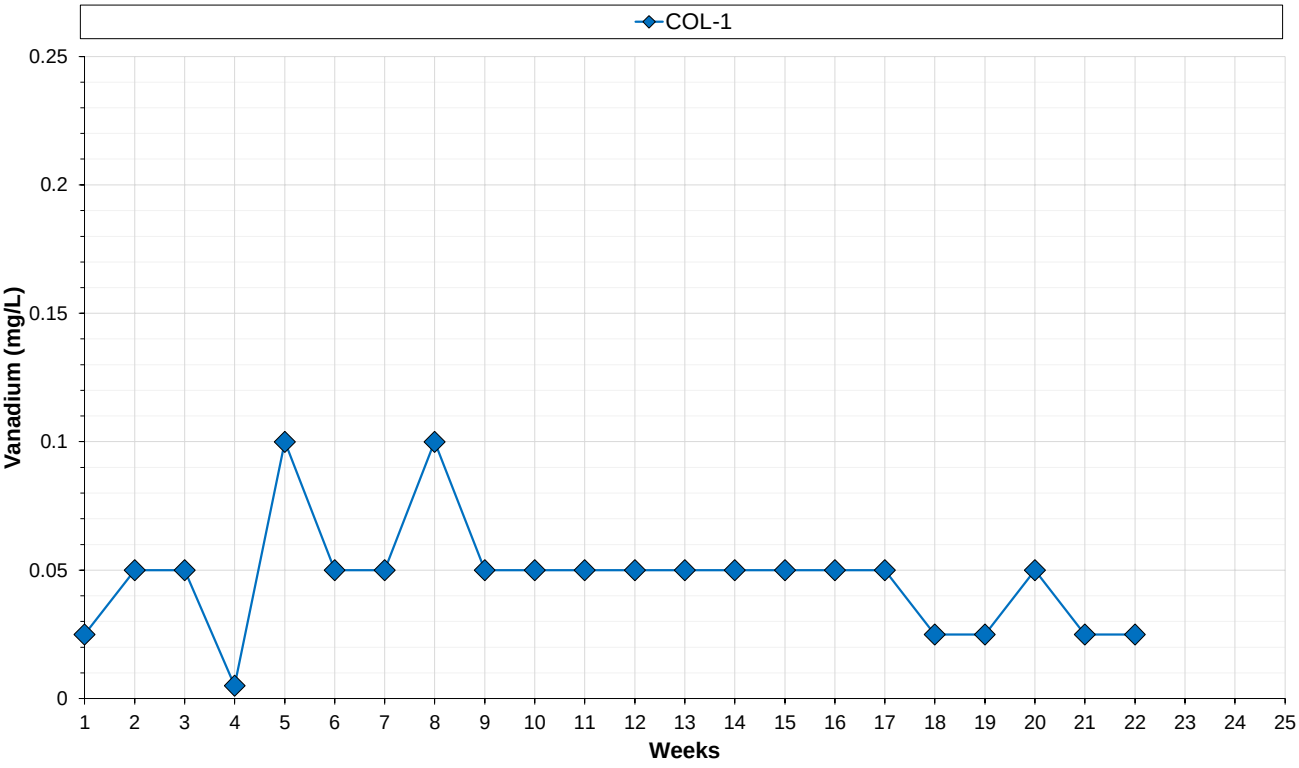
Figure Number		I-35	
Project Number		OMEMA2303	
Date		November 2025	
Drawn	SM	Reviewed	JB





Note:
Release rates shown are based on the change in load release week to week throughout column operation.

Due to a tubing malfunction in Week 9, approximately 1000 mL was lost from the column; 1000 mL was added to maintain an overlying water column of 21 cm throughout the remainder of testing.

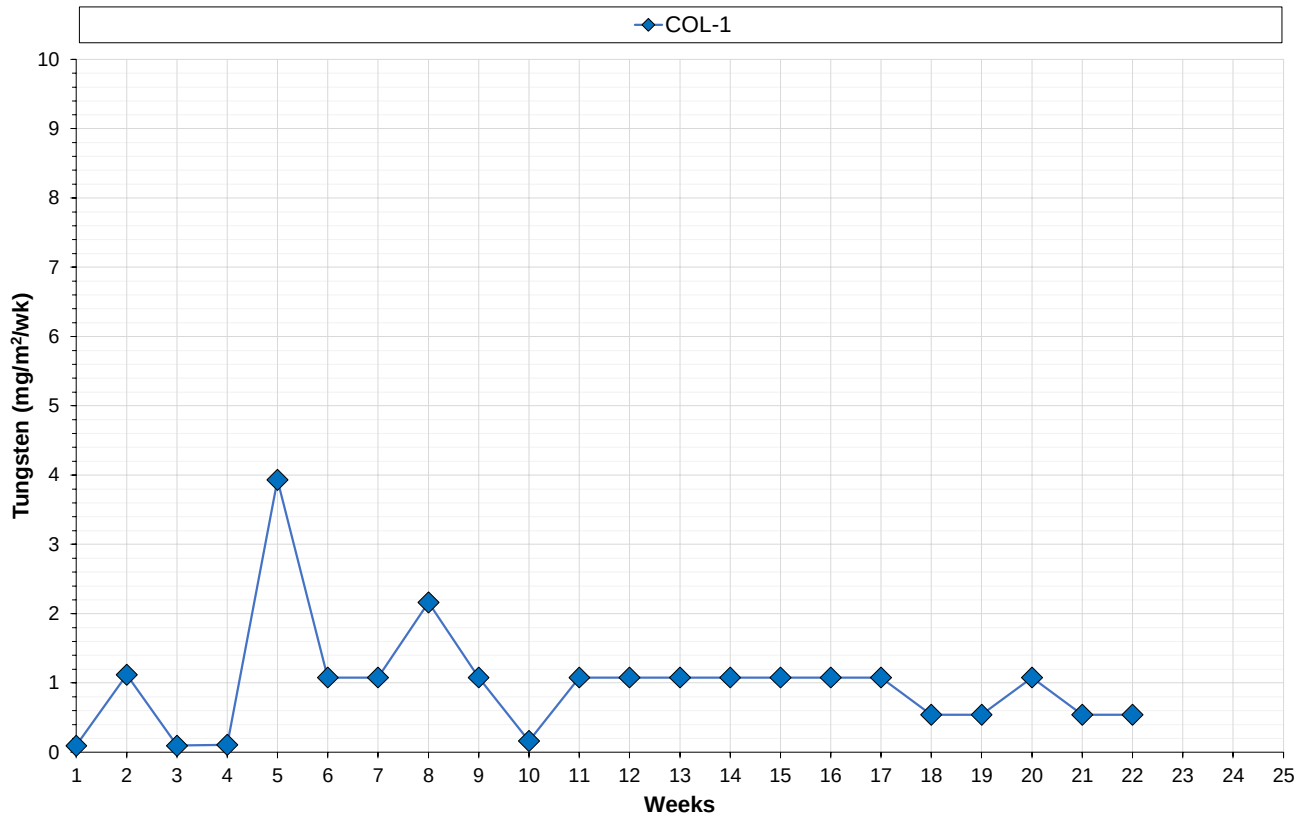
KINROSS

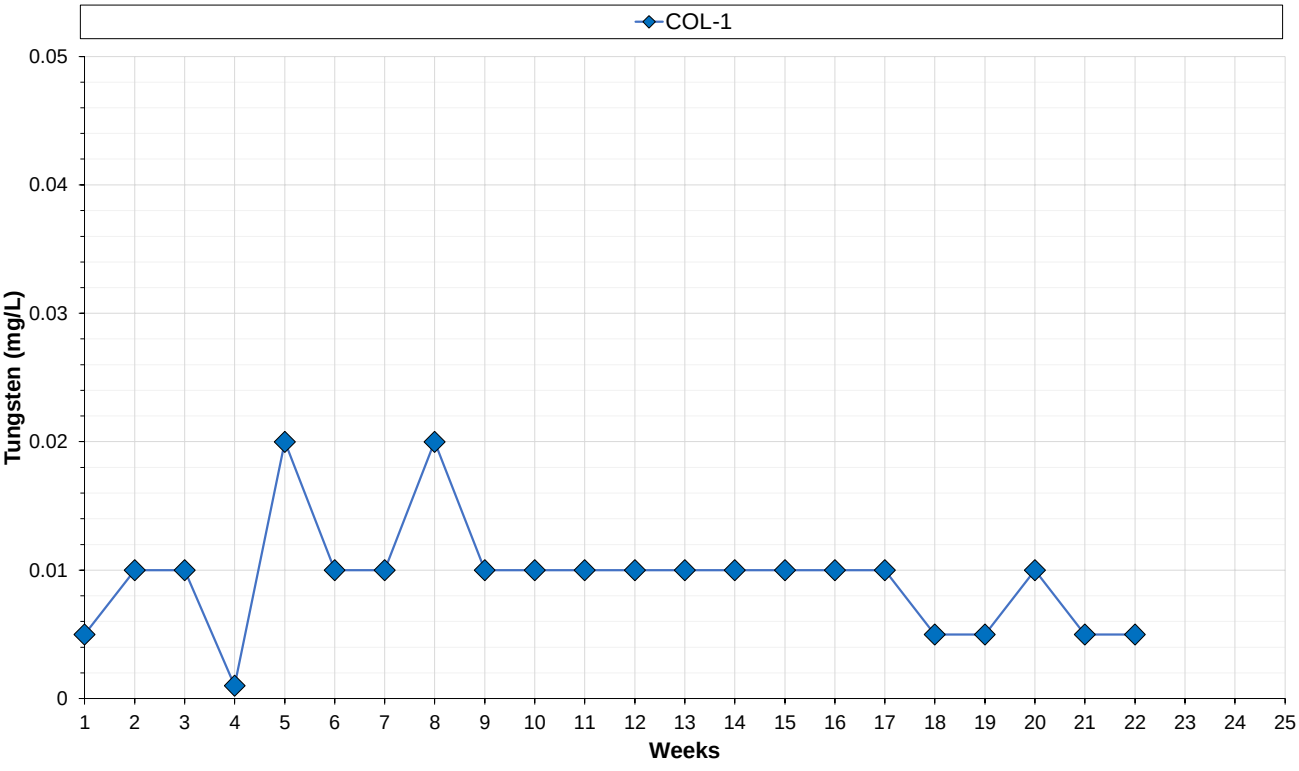
Vanadium (V)

Concentrate Tailings - Subaqueous Recirculating Column

Great Bear Project

Figure Number		I-36	
Project Number		OMEMA2303	
Date		November 2025	
Drawn	SM	Reviewed	JB





Note:
Release rates shown are based on the change in load release week to week throughout column operation.

Due to a tubing malfunction in Week 9, approximately 1000 mL was lost from the column; 1000 mL was added to maintain an overlying water column of 21 cm throughout the remainder of testing.

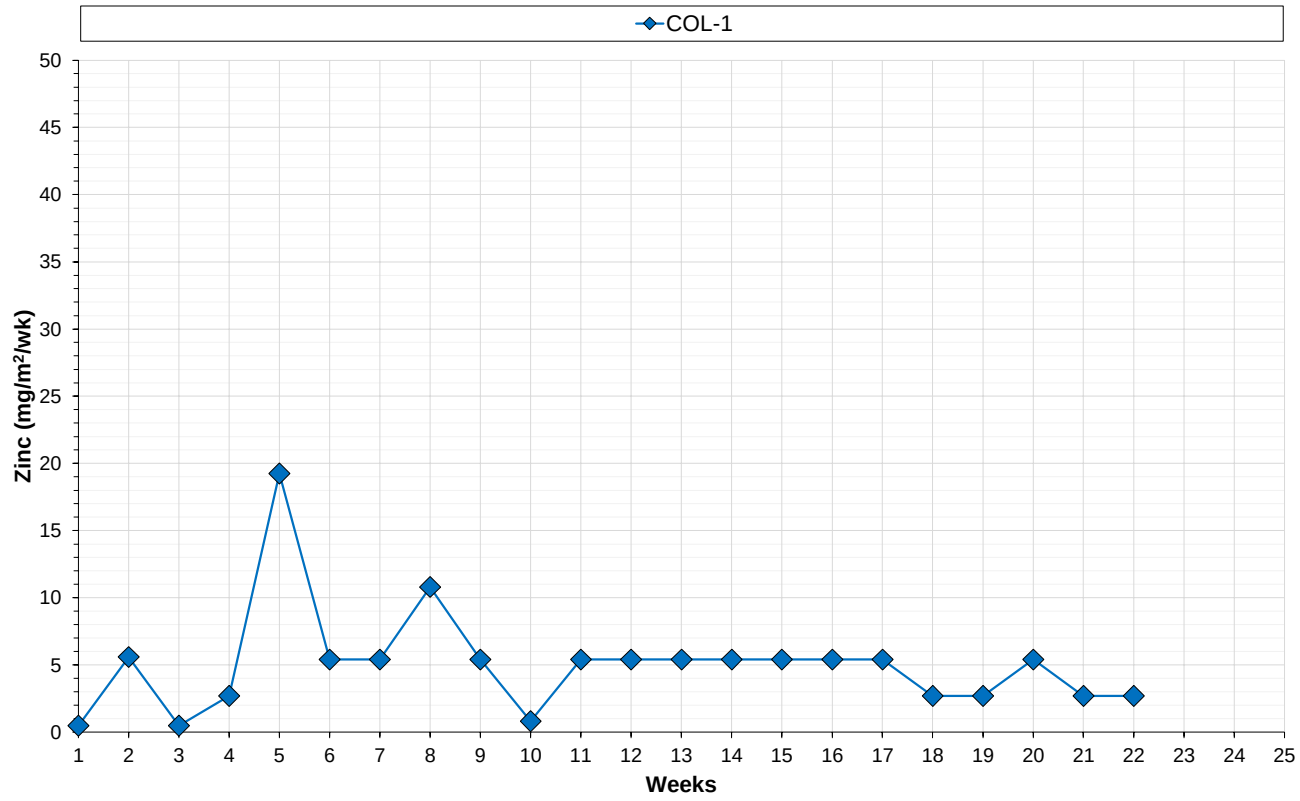
KINROSS

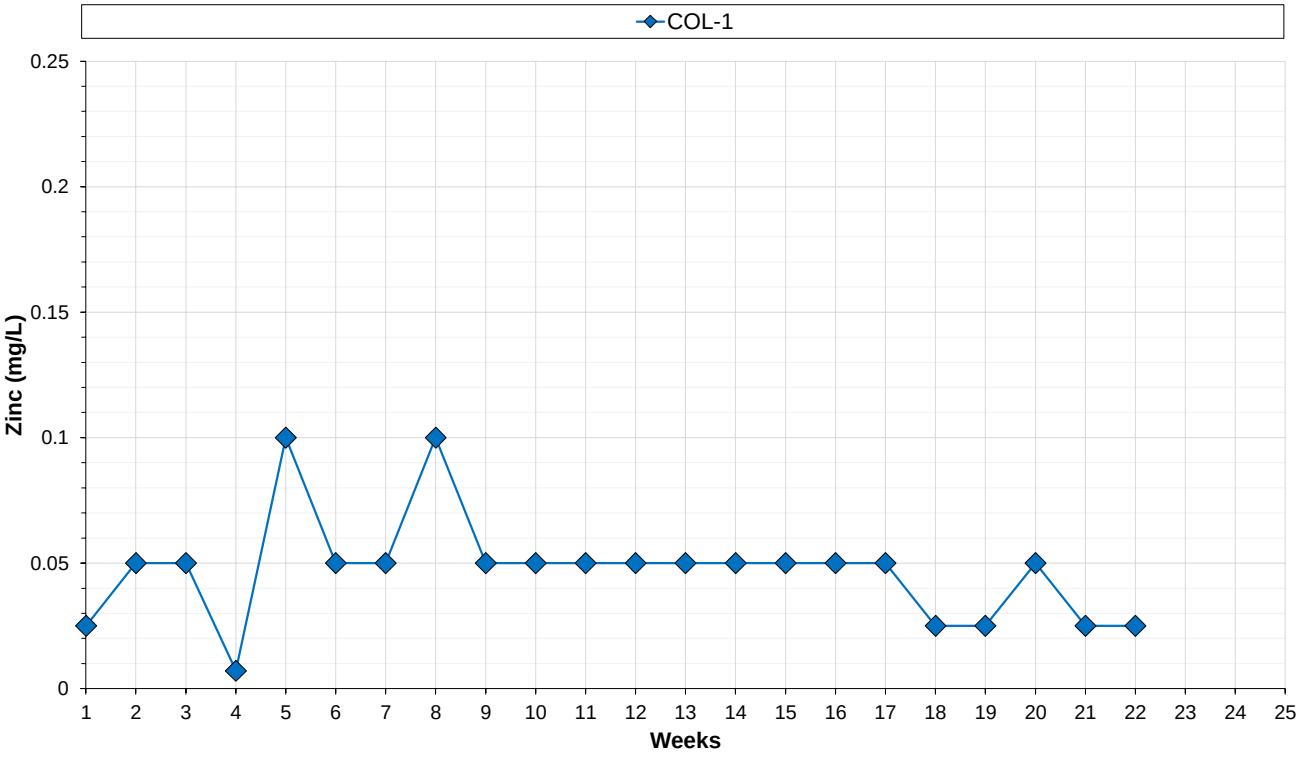
Tungsten (W)

Concentrate Tailings - Subaqueous Recirculating Column

Great Bear Project

Figure Number		I-37	
Project Number		OMEMA2303	
Date		November 2025	
Drawn	SM	Reviewed	JB





Note:
Release rates shown are based on the change in load release week to week throughout column operation.

Due to a tubing malfunction in Week 9, approximately 1000 mL was lost from the column; 1000 mL was added to maintain an overlying water column of 21 cm throughout the remainder of testing.

Project Number		OMEMA2303	
Date		November 2025	
Drawn	SM	Reviewed	JB

Notes:

Column tests followed nine pre-leach cycles to remove curing by-products and simulate aged backfill at the time of flooding.

Steady and decreasing column concentrations are depicted with a loading rate of zero.

Minimum Load condition uses 1/2 DL to calculate a conservative loading rate.

(1) Total sulphur determined by Leco analyzer.
(2) Sulphate sulphur determined by HCl leach and Leco.
(3) Sulphide sulphur determined by difference (total sulphur - sulphate sulphur); where sulphate sulphur was less than the analytical detection limit, sulphide sulphur was assumed to be equivalent to total sulphur.
(4) Acid potential calculated as 31.25*sulphide S; where sulphide S was equal to zero, acid potential was calculated as 31.25*total sulphur.
(5) Maximum potential acidity, calculated as 31.25*total S.
(6) NP from MEND 1991 method, based on the 1989 Lawrence Modified NP method
(7) Total Carbon determined by Leco analyzer.
(8) Total inorganic carbon (as C) determined by Leco analyzer and HCl leach.
(9) Carbonate neutralization potential, calculated as TIC*10*(100/12.01).
(10) Neutralization potential ratio, calculated as NP/AP; for samples with negative NP, NP was adjusted to 0.5 kgCaCO$_3$/t for calculation of NPR.
(11) Carbonate neutralization potential ratio, calculated as CarbNP/MPA.
(12) Single addition NAG pH; a NAG pH of 4.5 was used to differentiate between NPAG and PAG samples.
(13) Approximate depth based on practical reach of the excavator.

(1) Total sulphur determined by Leco analyzer.
(2) Sulphate sulphur determined by HCl leach and Leco.
(3) Sulphide sulphur determined by difference (total sulphur - sulphate sulphur); where sulphate sulphur was less than the analytical detection limit, sulphide sulphur was assumed to be equivalent to total sulphur.
(4) Acid potential calculated as 31.25*sulphide S; where sulphide S was equal to zero, acid potential was calculated as 31.25*total sulphur.
(5) Maximum potential acidity, calculated as 31.25*total S.
(6) NP from MEND 1991 method, based on the 1989 Lawrence Modified NP method
(7) Total Carbon determined by Leco analyzer.
(8) Total inorganic carbon (as C) determined by Leco analyzer and HCl leach.
(9) Carbonate neutralization potential, calculated as TIC*10*(100/12.01).
(10) Neutralization potential ratio, calculated as NP/AP; for samples with negative NP, NP was adjusted to 0.5 kgCaCO$_3$/t for calculation of NPR.
(11) Carbonate neutralization potential ratio, calculated as CarbNP/MPA.
(12) Single addition NAG pH; a NAG pH of 4.5 was used to differentiate between NPAG and PAG samples.
(13) Approximate depth based on practical reach of the excavator.

(1) Total sulphur determined by Leco analyzer.
(2) Sulphate sulphur determined by HCl leach and Leco.
(3) Sulphide sulphur determined by difference (total sulphur - sulphate sulphur); where sulphate sulphur was less than the analytical detection limit, sulphide sulphur was assumed to be equivalent to total sulphur.
(4) Acid potential calculated as 31.25*sulphide S; where sulphide S was equal to zero, acid potential was calculated as 31.25*total sulphur.
(5) Maximum potential acidity, calculated as 31.25*total S.
(6) NP from MEND 1991 method, based on the 1989 Lawrence Modified NP method
(7) Total Carbon determined by Leco analyzer.
(8) Total inorganic carbon (as C) determined by Leco analyzer and HCl leach.
(9) Carbonate neutralization potential, calculated as TIC*10*(100/12.01).
(10) Neutralization potential ratio, calculated as NP/AP; for samples with negative NP, NP was adjusted to 0.5 $CaCO_3/t$ for calculation of NPR.
(11) Carbonate neutralization potential ratio, calculated as CarbNP/MPA.
(12) Single addition NAG pH; a NAG pH of 4.5 was used to differentiate between NPAG and PAG samples.
(13) Approximate depth based on practical reach of the excavator.

(1) Table 1, Column 2 Ontario Soil Screening Standards.
(2) Based on crustal abundance provided by Price (1997) excluding major elements.
(3) Approximate depth based on practical reach of the excavator.
Bold values indicate concentrations greater than Ontario Soil Screening Standards.
Shaded cells indicate concentrations greater than 10x Crustal Abundance values.

(1) Table 1, Column 2 Ontario Soil Screening Standards.
(2) Based on crustal abundance provided by Price (1997) excluding major elements.
(3) Approximate depth based on practical reach of the excavator.
Bold values indicate concentrations greater than Ontario Soil Screening Standards.
Shaded cells indicate concentrations greater than 10x Crustal Abundance values.

(1) Table 1, Column 2 Ontario Soil Screening Standards.
(2) Based on crustal abundance provided by Price (1997) excluding major elements.
(3) Approximate depth based on practical reach of the excavator.
Bold values indicate concentrations greater than Ontario Soil Screening Standards.
Shaded cells indicate concentrations greater than 10x Crustal Abundance values.

(1) Table 1, Column 2 Ontario Soil Screening Standards.
(2) Based on crustal abundance provided by Price (1997) excluding major elements.
(3) Approximate depth based on practical reach of the excavator.
Bold values indicate concentrations greater than Ontario Soil Screening Standards.
Shaded cells indicate concentrations greater than 10x Crustal Abundance values.

(1) Table 1, Column 2 Ontario Soil Screening Standards.
(2) Based on crustal abundance provided by Price (1997) excluding major elements.
(3) Approximate depth based on practical reach of the excavator.
Bold values indicate concentrations greater than Ontario Soil Screening Standards.
Shaded cells indicate concentrations greater than 10x Crustal Abundance values.

(1) Table 1, Column 2 Ontario Soil Screening Standards.
(2) Based on crustal abundance provided by Price (1997) excluding major elements.
(3) Approximate depth based on practical reach of the excavator.
Bold values indicate concentrations greater than Ontario Soil Screening Standards.
Shaded cells indicate concentrations greater than 10x Crustal Abundance values.

(1) Approximate depth based on practical reach of the excavator.

Shaded cells indicate concentrations greater than the in-place PWQO screening value.

Bold values indicate concentrations greater than the interim PWQO screening value.

(1) Approximate depth based on practical reach of the excavator.

Shaded cells indicate concentrations greater than the in-place PWQO screening value.

Bold values indicate concentrations greater than the interim PWQO screening value.

(1) Approximate depth based on practical reach of the excavator.

Shaded cells indicate concentrations greater than the in-place PWQO screening value.

Bold values indicate concentrations greater than the interim PWQO screening value.

(1) Approximate depth based on practical reach of the excavator.

Shaded cells indicate concentrations greater than the in-place PWQO screening value.

Bold values indicate concentrations greater than the interim PWQO screening value.

(1) Total sulphur determined by Leco analyzer.
(2) Sulphate sulphur determined by HCl leach.
(3) Sulphide sulphur determined by difference (total sulphur - sulphate sulphur); where sulphate sulphur was less than the analytical detection limit, sulphide sulphur was assumed to be equivalent to total sulphur.
(4) Acid potential calculated as 31.25*sulphide S; where sulphide S was equal to zero, acid potential was calculated as 31.25*total sulphur.
(5) Maximum potential acidity, calculated as 31.25*total S.
(6) NP from MEND 1991 method, based on the 1989 Lawrence Modified NP method
(7) Total Carbon determined by Leco analyzer.
(8) Total inorganic carbon (as C) determined by Leco analyzer and HCl leach.
(9) Carbonate neutralization potential, calculated as TIC*10*(100/12.01).
(10) Neutralization potential ratio, calculated as NP/AP; for samples with negative NP, NP was adjusted to reflect the detection limit of 0.5 $CaCO_3$/t for calculation of NPR.
(11) Carbonate neutralization potential ratio, calculated as CarbNP/MPA.

(1) Total sulphur determined by Leco analyzer.
(2) Sulphate sulphur determined by HCl leach.
(3) Sulphide sulphur determined by difference (total sulphur - sulphate sulphur); where sulphate sulphur was less than the analytical detection limit, sulphide sulphur was assumed to be equivalent to total sulphur.
(4) Acid potential calculated as 31.25*sulphide S; where sulphide S was equal to zero, acid potential was calculated as 31.25*total sulphur.
(5) Maximum potential acidity, calculated as 31.25*total S.
(6) NP from MEND 1991 method, based on the 1989 Lawrence Modified NP method
(7) Total Carbon determined by Leco analyzer.
(8) Total inorganic carbon (as C) determined by Leco analyzer and HCl leach.
(9) Carbonate neutralization potential, calculated as TIC*10*(100/12.01).
(10) Neutralization potential ratio, calculated as NP/AP; for samples with negative NP, NP was adjusted to reflect the detection limit of 0.5 $CaCO_3$/t for calculation of NPR.
(11) Carbonate neutralization potential ratio, calculated as CarbNP/MPA.

Shaded cells indicate concentrations greater than the in-place PWQO screening value.
Bold values indicate concentrations greater than the interim PWQO screening value.
