E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10008-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: May 16, 2025
Analyst(s): Jason S

Date Received: May 7, 2025
Sampling Date(s): May 2, 2025
Date Issued: May 22, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR060525JS1.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold-GBR by SGS: CA10094-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: June 16, 2025
Analyst(s): Jason S

Date Received: May 22, 2025
Sampling Date(s): May 16, 2025
Date Issued: June 17, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR061625JS2.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

ISO/IEC 17025:2017 Accredited with the Canadian Association of Laboratory Accreditation

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold-GBR by SGS: CA10134-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: July 9, 2025
Analyst(s): Jason S

Date Received: June 2, 2025
Sampling Date(s): May 23, 2025
Date Issued: July 10, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR070925JS2.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10181-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: July 22, 2025
Analyst(s): Jason S

Date Received: June 4, 2025
Sampling Date(s): May 30, 2025
Date Issued: 7/28/2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR072225JS1.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold-GBR by SGS: CA10038-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Date Received: June 11, 2025
Sampling Date(s): June 6, 2025
Date Issued: July 28, 2025

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: July 25, 2025
Analyst(s): Jason S

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR072525JS1.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10086-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Date Received: June 19, 2025
Sampling Date(s): June 13, 2025
Date Issued: July 29, 2025

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: July 28, 2025
Analyst(s): Jason S

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR072825JS2.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

ISO/IEC 17025:2017 Accredited with the Canadian Association of Laboratory Accreditation
Testing Accreditation No. A3306

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10127-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Date Received: July 7, 2025
Sampling Date(s): June 20, 2025
Date Issued: August 12, 2025

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: August 11, 2025
Analyst(s): Jason S

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10105-AUG25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: September 4, 2025
Analyst(s): Jason S

Date Received: August 19, 2025
Sampling Date(s): August 15, 2025
Date Issued: September 5, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10090-SEP25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.:
Date Received: September 18, 2025
Date Analysed: October 1, 2025
Sampling Date(s): September 12, 2025
Analyst(s): Jason S
Date Issued: October 2, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10001-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: May 16, 2025
Analyst(s): Jason S

Date Received: May 7, 2025
Sampling Date(s): May 1, 2025
Date Issued: May 22, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR051625JS1.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.
Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Date Received: May 7, 2025
Sampling Date(s): May 2, 2025
Date Issued: May 22, 2025

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: May 16, 2025
Analyst(s): Jason S

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10045-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: May 31, 2025
Analyst(s): Jason S

Date Received: May 14, 2025
Sampling Date(s): May 9, 2025
Date Issued: June 5, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10045-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: June 4, 2025
Analyst(s): Jason S

Date Received: May 14, 2025
Sampling Date(s): May 9, 2025
Date Issued: June 5, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold-GBR by SGS: CA10092-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Received: May 22, 2025
Date Analysed: June 17, 2025
Sampling Date(s): May 16, 2025
Analyst(s): Jason S
Date Issued: June 18, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

CLIENT: Kinross Gold-GBR by SGS: CA10127-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: July 9, 2025
Analyst(s): Jason S

Date Received: May 29, 2025
Sampling Date(s): May 22, 2025
Date Issued: July 10, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

CLIENT: Kinross Gold - GBR by SGS: CA10174-MAY25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: July 15, 2025
Analyst(s): Jason S

Date Received: June 2, 2025
Sampling Date(s): May 29, 2025
Date Issued: July 16, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR071825JS1.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10031-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: July 22, 2025
Analyst(s): Jason S

Date Received: June 9, 2025
Sampling Date(s): June 5, 2025
Date Issued: July 28, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold-GBR by SGS: CA10036-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Received: June 11, 2025
Date Analysed: July 23, 2025
Sampling Date(s): June 6, 2025
Analyst(s): Jason S
Date Issued: July 28, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR072325JS1.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

CLIENT: Kinross Gold - GBR by SGS: CA10079-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: July 28, 2025
Analyst(s): Jason S

Date Received: June 16, 2025
Sampling Date(s): June 12, 2025
Date Issued: July 29, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

CLIENT: Kinross Gold - GBR by SGS: CA10084-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Received: June 30, 2025
Date Analysed: August 7, 2025
Sampling Date(s): June 13, 2025
Analyst(s): Jason S
Date Issued: August 8, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

The bottle for HC-15 Wk#107 was found cracked upon arrival – the sample was able to be transferred to a clean bottle. Total mercury results for samples not oxidized in their original bottles can be lower than would be expected for samples in their original bottles. This can be a result of loss of mercury onto the walls of the original bottle which would normally be recovered when BrCl is added to that bottle.

Sample HC-16 Wk#107 was received on July 2, 2025.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10120-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Analysed: August 11, 2025
Analyst(s): Jason S

Date Received: June 23, 2025
Sampling Date(s): June 19, 2025
Date Issued: August 12, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Total Mercury Results

Flett Research Ltd.
440 DeSalaberry Ave. Winnipeg, MB R2L 0Y7
Fax/Phone (204) 667-2505
E-mail: flett@flettresearch.ca Webpage: http://www.flettresearch.ca

CLIENT: Kinross Gold - GBR by SGS: CA10125-JUN25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Received: July 7, 2025
Date Analysed: August 13, 2025
Sampling Date(s): June 20, 2025
Analyst(s): Jason S
Date Issued: August 14, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Q:\Clients A-L\Kinross Gold - GBR by SGS\2025(1127)\Total Mercury\TMWATR081325JS1.xls

* : See 'Comments' section above for discussion.
~ : Result below the methods ML.

This test report shall not be reproduced, except in full, without written approval of the laboratory.
Note: Results relate only to the samples tested and as received.

Minimum Level (ML): the amount of mercury that can be reported with almost 100% confidence that the measured concentration exceeds zero.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

CLIENT: Kinross Gold - GBR by SGS: CA10080-SEP25
185 Concession Street
Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.:
Date Received: September 16, 2025
Date Analysed: October 1, 2025
Sampling Date(s): September 11, 2025
Analyst(s): Jason S
Date Issued: October 2, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

PO/Contract No.: 369790
Date Received: August 19, 2025
Date Analysed: September 4, 2025
Sampling Date(s): August 14, 2025
Analyst(s): Jason S
Date Issued:

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Sample was filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Lakefield, ON K0L 2H0

Matrix: Water
Transaction ID: 1127
PO/Contract No.: 369790
Date Received: July 23, 2025
Date Analysed: August 12, 2025
Sampling Date(s): July 17, 2025
Analyst(s): Jason S
Date Issued: August 14, 2025

Analytical Method: Total Mercury in Water by Oxidation, Purge and Trap, and CVAFS (T00120 version 9)

Comments: Samples were filtered prior to arrival at Flett.

Detection Limit: The method detection limit (MDL) for this method is 0.04 ngL.
The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration is distinguishable from method blanks and is based on the analysis of 30mL of sample.

For reporting purpose samples are flagged when the amount of mercury detected is below the EPA defined minimum level (ML= 0.2 ng/L).
As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall method uncertainty decreases as analyte concentration increases. When mercury concentrations exceed 1ng/L the estimated uncertainty of the method is ±12%.
At a concentration of 0.2ng/L the estimated uncertainty is ± 30%. When mercury concentrations are at MDL uncertainty can be ± 46% (0.04 ± 0.02ng/L).

All method uncertainties are expressed at a 95% confidence level of (k=2).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Revised to include Zirconium analysis.

'DX450022 Week 6' sample leaked therefore not sufficient sample for any requested analysis.

NSS - Not sufficient sample
ODWS - Ontario Drinking Water Standards
MAC/IMAC - Maximum / Interim Maximum Acceptable Concentration
AO/OG - Aesthetic Objective / Operational Guideline
* Exceeds ODWS limit
** No ODWS limit
